A LETTER TO THE PEOPLE OF INDIA 38-95

Charges based on a private letter, 38 — Round Table movement, 38 — Connexion with Sir J. Meston and Mr. Marris in South Africa, 39 — South African Union, 40 — Position of British citizens in South Africa, 40 — Extension of movement to Canada, 41 — Indian question discussed with Mr. Marris, 41 — Visit to Canada, 42 — Round Table founded, 43 — The Dominion groups and their work, 43 — First results, 43 — The Agra group, 44 — Growth of Canadian groups, 44 — Imperial problem analysed, 45 — Character of movement, 45 — Conclusions accelerated by war, 46 — 'The Problem of the Commonwealth,' 46 — The Dominions revisited 1916, 47 — Foreword to Australian edition, 48 — Indian problem excluded, 48 — Visit to India advised, 49 — Arrival in India, 49 — Rearrangement of plans, 50 — Text of letter which occasioned the charges, 51 — Why the letter was printed for private circulation, 57 — Why Sir J. Meston and Mr. Marris never saw it, 58 — Its private character, 59 — A misstatement explained, 59 — Answer to charges contained in the letter, 59 — Two points emphasized, 62 — Relations with officials, 62 — Press attacks at Lucknow, 63 — Circulation of the letter at Lucknow, 64 — Its publication, 64 — Some Indian opinions on the letter, 66 — Its effect on Hindu-Moslem relations, 66 — An English opinion, 67 — The ethics of privacy, 67 — The language difficulty, 68 — Question of Round Table groups in India, 69 — Value of group methods, 70 — Creation of Indian groups and its failure, 71 — Attacks on the Round Table and Mr. Kerr, 72 — Attitude of Nationalists towards British sympathizers, 75 — Attitude of Dominions towards Indian reform, 76 — The Indian and Imperial problems inseparable

Treatment of this subject in the problem of the Commonwealth, 77
 misrepresentation in Indian reviews, 78 — Respect for Indian susceptibilities, 79 — 'Self-government has a formula analysed, 80 — Reasons for instituting 'Responsible government', 81 — The post-war settlement,
 — Financial consequences of war, 83 — Imperial problem explained,
 — Its solution as involving separate parliaments for Imperial and
 British affairs, 85 — India's choice between the two, 85 — Representation
 India in Imperial Parliament, 86 — Position of Islam in the Upper
 House, 87 — In the Lower House, 87 — The question before India summar-
 ized, 88 — Plea for reverting from personal to public issues, 89.
 APPENDIX. The Congress League Scheme, 90.

III

LETTER TO THE HON. BABU BHUPENDRA NATH BASU WITH COMMENTS THEREON . . . 96-200

Prefatory note, 96 — Inter-relation of Indian with Imperial problem, 97
 Value of direct inquiries by Parliament, 98 — Result of congestion of
 business, 98 — Failure of Parliament to instruct its agents, 99 — The cure
 — separate Imperial Parliament, 99 — Appropriate place for India's
 charter, 100 — British objection to declaration of principles, 100 — e. g.
 native emigration to Dominions, 101 — This analogy disputed, 101
 reasons for defining goal, 102 — Federalized countries to be imitated
 other than United Kingdom, 102 — Reform must begin in provincial
 governments, 103 — Indian and Federalized systems contrasted, 103
 since the need of dyarchy, 105 — Division of functions between popular
 and paternal governments, 105 — Failure to distinguish central from
 provincial functions in India, 106 — Peculiar position of the U. C. S., 107
 need for vertical as well as horizontal divisions, 108 — Each province must
 advance at its own pace, 108 — No element of responsible government in
 Congress-League scheme, 108 — Importance of working theories out in
 schemes, 109 — Mischievous results of official vote, 109 — Value of real
 party-government, 110 — Retention of official speakers, 110 — Tax on
 use of official members, 111 — Legislative council to advise on but not
 control all functions, 111 — Importance of direct election, 111 — List of
 powers for transfer to exclusive control of elected councils, 113 — Dual
 capacity of councils, 114 — Elasticity of plan proposed, 114 — Creation of
 ministry described, 115 — Increase of transferred powers by special
 legislation, 118 — e. g. in social reform, 119 — Progress by results, 119
 difficulties of dyarchy, Dualism, 120 — Financial friction, 120 — Advan-
 tages of dyarchy, 121 — Progressive results. Education in responsibility,
 121 — Eventual application of responsible government to central authority
 in one step, 122 — Advantage to India of a true Imperial government,
 122 — Importance of Parliamentary inquiries, 122 — These suggestions
 sketched to elicit criticism, 123.

Appended criticisms, 124 — Prefatory note, 125.

Comments by Indian Non-officials

No. 1. *From an advocate*, 126 — Objections to official majority, 126 —
 Inter-relation of functions, 126 — Transfer of primary education advised,
 127 — Personal character of Indian elections, 127 — Governments with
 fixed terms advised, 127 — Friction over taxation feared, 128 — Propa-
 ganda by officials 129 — A modification of dyarchy suggested, 129 —
 franchise qualifications, 130.

Treatment of this subject in the problem of the Commonwealth, 77
 misrepresentation in Indian reviews, 78 — Respect for Indian susceptibilities, 79 — 'Self-government has a formula analysed, 80 — Reasons for instituting 'Responsible government', 81 — The post-war settlement,

APPENDIX. Note on Hindi-Urdu question, 323.

VII

A JOINT ADDRESS

326-356

The Pronouncement of August 20, 1917, 326.

A. Principles, 327 — Need for agreement between Europeans and Indians. Limits of agreement, 327 — The Pronouncement accepted by both, 327 — The United States of India within the British Commonwealth, 328 — Exclusion of Burma, 329 — Overgrowth of provinces, 329 — Subdivision into Provincial States, 330 — Reform should begin in the provinces, 331 — Dyarchy as implied in the Pronouncement, 332 — Executive council reform. Indian members. Administrative committees, 334 — The creation of electorates, 334 — Electorates must be vested with real responsibility — Reservation of police and justice for final transfer, 335 — Direct election advocated, 336.

B. Outline of scheme proposed, 336 — Scheme outlined in terms of United Provinces, 336 — Subdivision into four Provincial States, 336 — Electorates, 337 — Assemblies and their functions, 337 — Creation of ministries, 338 — Organization of new departments, 338 — Relation of Chief Commissioner to ministers, 338 — Share of consolidated revenue to be transferred, 339 — Self-taxation and responsible government inseparable, 339 — Audit, 339 — Reasons against supervision by provincial government, 340 — Total suspension the real safeguard, 340 — Periodic inspection of results by independent commission, 340 — Constitutional agitation to be barred during septennial periods, 340 — Gradual development of transferred powers and revenues by enabling legislation, 341 — Generalization of powers granted locally, 342 — Final establishment of responsible government for all India by national convention, 342 — Interim position of provincial governments, 342 — Executive councils to be everywhere established, 343 — Composition of provincial legislatures. Disappearance of official voters. Advisory character of provincial legislatures, 343 — Control of enabling legislation by executive councils, 344 —

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations. The text also mentions that proper record-keeping is essential for identifying trends and making informed decisions.

2. The second part of the document outlines the various methods and tools used to collect and analyze data. It describes how different types of data are gathered and how they are processed to extract meaningful insights. The text highlights the importance of using reliable and valid data sources to ensure the accuracy of the findings.

3. The third part of the document focuses on the interpretation of the results and the drawing of conclusions. It explains how the data is analyzed to identify patterns and trends, and how these findings are used to inform decision-making. The text also discusses the importance of communicating the results effectively to the relevant stakeholders.

4. The fourth part of the document discusses the challenges and limitations of the research. It identifies the various factors that can affect the quality and reliability of the data, and how these can be minimized. The text also mentions the importance of being transparent about the limitations of the study and the potential for bias.

5. The fifth part of the document provides a summary of the key findings and conclusions. It highlights the main results of the study and the implications for practice. The text also discusses the future directions of the research and the need for further investigation in this area.

6. The final part of the document is a conclusion that summarizes the overall findings and the importance of the research. It emphasizes the need for continued research and the importance of using the findings to improve the organization's performance and decision-making.

- 298 — Agricultural education, 299 — View of education in rural India, 299 — Need for agricultural education, 300.

A JOINT ADDRESS

326-356

The Pronouncement of August 20, 1917, 326.

A. Principles, 327 — Need for agreement between Europeans and Indians. Limits of agreement, 327 — The Pronouncement accepted by both, 327 — The United States of India within the British Commonwealth, 328 — Exclusion of Burma, 329 — Overgrowth of provinces, 329 — Sub-division into Provincial States, 330 — Reform should begin in the provinces, 331 — Dyarchy as implied in the Pronouncement, 332 — Executive council reform. Indian members. Administrative committees, 334 — The creation of electorates, 334 — Electorates must be vested with real responsibility — Reservation of police and justice for final transfer, 335 — Direct election advocated, 336.

B. Outline of scheme proposed, 336 — Scheme outlined in terms of United Provinces, 336 — Subdivision into four Provincial States, 336 — Electorates, 337 — Assemblies and their functions, 337 — Creation of ministries, 338 — Organization of new departments, 338 — Relation of Chief Commissioner to ministers, 338 — Share of consolidated revenue to be transferred, 339 — Self-taxation and responsible government inseparable, 339 — Audit, 339 — Reasons against supervision by provincial government, 340 — Total suspension the real safeguard, 340 — Periodic inspection of results by independent commission, 340 — Constitutional agitation to be barred during septennial periods, 340 — Gradual development of transferred powers and revenues by enabling legislation, 341 — Generalization of powers granted locally, 342 — Final establishment of responsible government for all India by national convention, 342 — Interim position of provincial governments, 342 — Executive councils to be everywhere established, 343 — Composition of provincial legislatures. Disappearance of official voters. Advisory character of provincial legislatures, 343 — Control of enabling legislation by executive councils, 344 —

Composition of central legislature, 344 — Standing civil service commission, 344.

C. Safeguards, 346 — Necessary for industries financed from Europe, 346 — The Veto. Instructions to governors, 346 — Powers of provincial executives to act in default, 347 — Power of suspension, 347 — European representation, 349.

D. Procedure recommended, 349 — Appointment of commissioners suggested, 350 — Need for dispatch, 350 — Importance of creating a visible path to responsible government, 351 — Schedule of points agreed, 351 — Signatures, 353 — Letters appended, 355.

VIII

LETTERS TO THE PEOPLE OF INDIA ON RESPONSIBLE GOVERNMENT 357-466

LETTER I. The meaning of words, 357 — Lack of instructions to British officials since 1858 — Ambiguities of 'self-government', 357 — The significance of responsible government explained, 358.

LETTER II. The Pronouncement of August 20, 357 — The question put by the Congress and League, 359 — Answer of Imperial Government. The method of the answer criticized, 360 — Intentional use of the term 'responsible government', 361 — Responsible government by instalments, 362 — Because electorates must be created, 363 — Final and unalterable character of pronouncement, 363 — Not the result of fear, 363 — Need for advice from Europeans in India, 364 — And for avoiding conflict between British opinion at home and in India, 365 — Mr. Montagu's mission as limited by the Pronouncement, 366.

LETTER III. Electoral systems false and true, 366 — Composition of legislatures examined, 367 — Limitation of electorates in United Provinces, 367 — Chain of indirect elections, 367 — The system an electoral sham, 368 — Morley's failure to face responsible government, 368 — Electorates cannot be trained by school teaching, 368 — Education without responsibility renders a country ungovernable, e. g. Russia, 369 — The educational effect of experience illustrated by an example. Permanganate and cholera, 369 — Effect of voting must be traceable, 370 — Religion as a motive for political obedience. Importance of substituting a moral motive, 370 — Education and political responsibility must go hand in hand, 371.

LETTER IV. The existing system and its logical outcome, 371 — Effect on legislators of irresponsible position, 371 — Stringent control of official members, 371 — Its evil effects on the government and on nationalists, 372 — Congress League scheme the logical outcome, 372 — The importance of defining responsibility. Reasons against elected executives, 373 — Dual responsibility of executives impossible, 374 — Successive steps open to advance on Minto-Morley principle, 374 — Meaning of control discussed, 374 — Positive as well as negative control essential, 375 — An official minority worse than useless, 375 — Danger of government by influence, 376 — Objections to dividing budget annually, 376 — Advantage of periodic divisions, 377 — Dualism inherent in proposal under criticism, 377 — Final concession of financial and legislative control paralyzes government, 378 — Congress League scheme criticized as the negation of responsible government, 378 — Its result the deadlock desired by extremists, 378 — The Minto-Morley principle a path to anarchy, 379 — Government, not anarchy, the only foundation of responsible institutions, 379 — Immediate grant of full responsible government barred by Pronouncement, 380.

Composition of central legislature, 344 — Standing civil service commission, 344.

C. Safeguards, 346 — Necessary for industries financed from Europe, 346 — The Veto, Instructions to governors, 346 — Powers of provincial executives to act in default, 347 — Power of suspension, 347 — European representation, 349.

D. Procedure recommended, 349 — Appointment of commissioners suggested, 350 — Need for dispatch, 350 — Importance of creating a visible path to responsible government, 351 — Schedule of points agreed, 351 — Signatures, 353 — Letters appended, 355.

VIII

LETTERS TO THE PEOPLE OF INDIA ON RESPONSIBLE GOVERNMENT 357-406

LETTER I. The meaning of words, 357 — Lack of instructions to British officials since 1858 — Ambiguities of 'self-government', 357 — The significance of responsible government explained, 358.

LETTER II. The Pronouncement of August 20, 357 — The question put by the Congress and League, 359 — Answer of Imperial Government, The method of the answer criticized, 360 — Intentional use of the term 'responsible government', 361 — Responsible government by instalments, 362 — Because electorates must be created, 363 — Final and unalterable character of pronouncement, 363 — Not the result of fear, 363 — Need for advice from Europeans in India, 364 — And for avoiding conflict between British opinion at home and in India, 365 — Mr. Montagu's mission as limited by the Pronouncement, 366.

LETTER III. Electoral systems false and true, 366 — Composition of legislatures examined, 367 — Limitation of electorates in United Provinces, 367 — Chain of indirect elections, 367 — The system an electoral sham, 368 — Morley's failure to face responsible government, 368 — Electorates cannot be trained by school teaching, 368 — Education without responsibility renders a country ungovernable, e. g. Russia, 369 — The educational effect of experience illustrated by an example. — Peruvian cholera, 369 — Effect of voting must be traceable, 370 — Religion as a motive for political obedience. — Importance of substituting a moral motive, 370 — Education and political responsibility must go hand in hand, 371.

LETTER IV. The existing system and its logical outcome, 371 — Effect on legislators of irresponsible position, 371 — Stringent control of official members, 371 — Its evil effects on the government and on nationalists, 372 — Congress League scheme the logical outcome, 372 — The importance of defining responsibility. Reasons against elected executives, 373 — Dual responsibility of executives impossible, 374 — Successive steps open to advance on Minto-Morley principle, 374 — Meaning of control discussed, 374 — Positive as well as negative control essential, 375 — An official minority worse than useless, 375 — Danger of government by influence, 376 — Objections to dividing budget annually, 376 — Advantage of periodic divisions, 377 — Dualism inherent in proposal under criticism, 377 — Final concession of financial and legislative control paralyzes government, 378 — Congress League scheme criticized as the negation of responsible government, 378 — Its result the deadlock desired by extremists, 378 — The Minto-Morley principle a path to anarchy, 379 — Government, not anarchy, the only foundation of responsible institutions, 379 — Immediate grant of full responsible government barred by Pronouncement, 380.

LETTER V. The fruits of experience, 380 — Necessity of harmonizing executive and legislature, 380 — How effected in England, 380 — In Scotland, 381 — In Ireland, 382 — In America, 382 — In Canada, 382 — In the Transvaal, 383 — India need not repeat mistakes made in these countries, 383 — Lowell on the cases of Jamaica and Malta, 384 — Indian appeals to German examples, 389 — The German position analysed, 390 — Italy and Japan, 391 — Cases where responsible government has only been attained through bloodshed, 391 — Importance of first establishing provincial democracies, 391.

LETTER VI. Alternative methods compared, 392 — Mr. Gokhale's proposal to apply Minto-Morley principle to the district officer, 392 — Home Member's reply, 392 — Problem not soluble by reference to precedents only, 393 — Proposal to institute responsible government in one province, 393 — Fallacy underlying proposal, 393 — Real problem is to create electorates, 394 — A misleading experiment if tried merely as a test, 394.

LETTER VII. The Goal, 395 — How to avoid makeshift policies, 395 — Choice between Europe and America as models for India, 395 — Dominion self-government possible only if India is treated as national unit on lines of United States, 396 — Importance of Indian nationalism as contrasted with Bengali or Punjabi nationalism, 397 — Nationalism as foundation of Imperial loyalty, 397.

LETTER VIII. The Map of India, 398 — Separation of Burma from India, 398 — Imperialization of Indian frontier, 399 — Simplifying effect of this step, 400 — Importance of establishing responsible government in appropriate provincial areas, 400 — Indian prejudice in favour of existing provinces, and some other British creations an obstacle to responsible government, 401 — Areas appropriate to local provincial and national governments, 402 — Why provincial governments are necessary, 402 — Over-centralization in United Kingdom, France, and Italy, 402 — Origin of oversized provinces in India, 403 — The natural result of autocratic government, 403 — Cf. Spanish and French America and China, 403 — Contrast U. S. A. and British Dominions, 404 — Danger of oversized provinces under popular government, 404 — U. S. A. as index to appropriate size of provinces, 405 — American standards as applied to India, 406 — Provincial areas should be based on history, religion, race, but especially on language, 406 — Relative position of vernacular and English in Indian politics, 406 — Failure of Durham's policy in Quebec, 407 — The case of Orissa, 407 — Sind, Marathas, Canarese, Tamil, and Telugu communities, 408 — Value of experiment, 408 — Subdivision of United Provinces, 408 — India can finally decide for herself whether to retain old provinces, provincial states, or both, 409 — But necessary experience will not be available unless provincial states are tried meanwhile, 409 — A change of opinion since drafting of joint address admitted, 410 — India's opportunity by Tandy, 410.

LETTER IX. Administrative mechanism and its reconstruction, 411 — Indivisible character of administrative machinery as fatal to dyarchy, 411 — This view the product of paternal system, 411 — Machinery must be divisible under responsible government, 412 — Solution of difficulty suggested, 412 — Dyarchy involves additional taxation, which representative government makes possible, 413 — How to divide the revenues, 413 — Staffs must also be divided, 413.

LETTER X. The training ground of electorates, 414 — The crux of problem is the training not of Indian officials but of Indian electorates, 414 — Responsibility essential to such training. Its bilateral character, 415 — Why training in local government is insufficient, 415 — The spheres of

LETTER V. The fruits of experience, 380 — Necessity of harmonizing executive and legislature, 380 — How effected in England, 380 — In Scotland, 381 — In Ireland, 382 — In America, 382 — In Canada, 382 — In the Transvaal, 383 — India need not repeat mistakes made in these countries, 383 — Lowell on the cases of Jamaica and Malta, 384 — Indian appeals to German examples, 389 — The German position analysed, 390 — Italy and Japan, 391 — Cases where responsible government has only been attained through bloodshed, 391 — Importance of first establishing provincial democracies, 391.

LETTER VI. Alternative methods compared, 392 — Mr. Gokhale's proposal to apply Minto-Morley principle to the district officer, 392 — Home Member's reply, 392 — Problem not soluble by reference to precedents only, 393 — Proposal to institute responsible government in one province, 393 — Fallacy underlying proposal, 393 — Real problem is to create electorates, 394 — A misleading experiment if tried merely as a test, 394.

LETTER VII. The Goal, 395 — How to avoid makeshift policies, 395 — Choice between Europe and America as models for India, 395 — Dominion self-government possible only if India is treated as national unit on lines of United States, 396 — Importance of Indian nationalism as contrasted with Bengali or Punjabi nationalism, 397 — Nationalism as foundation of Imperial loyalty, 397.

LETTER VIII. The Map of India, 398 — Separation of Burma from India, 398 — Imperialization of Indian frontier, 399 — Simplifying effect of this step, 400 — Importance of establishing responsible government in appropriate provincial areas, 400 — Indian prejudice in favour of existing provinces, and some other British creations an obstacle to responsible government, 401 — Areas appropriate to local provincial and national governments, 402 — Why provincial governments are necessary, 402 — Over-centralization in United Kingdom, France, and Italy, 402 — Origin of oversized provinces in India, 403 — The natural result of autocratic government, 403 — Cf. Spanish and French America and China, 403 — Contrast U. S. A. and British Dominions, 404 — Danger of oversized provinces under popular government, 404 — U. S. A. as index to appropriate size of provinces, 405 — American standards as applied to India, 406 — Provincial areas should be based on history, religion, race, but especially on language, 406 — Relative position of vernacular and English in Indian politics, 406 — Failure of Durham's policy in Quebec, 407 — The case of Orissa, 407 — Sind, Marathas, Canarese, Tamil, and Telugu communities, 408 — Value of experiment, 408 — Subdivision of United Provinces, 408 — India can finally decide for herself whether to retain old provinces, provincial states, or both, 409 — But necessary experience will not be available unless provincial states are tried meanwhile, 409 — A change of opinion since drafting of joint address admitted, 410 — India's opportunity by Tandy, 410.

LETTER IX. Administrative mechanism and its reconstruction, 411 — Indivisible character of administrative machinery as fatal to dyarchy, 411 — This view the product of paternal system, 411 — Machinery must be divisible under responsible government, 412 — Solution of difficulty suggested, 412 — Dyarchy involves additional taxation, which representative government makes possible, 413 — How to divide the revenues, 413 — Staffs must also be divided, 413.

LETTER X. The training ground of electorates, 414 — The crux of problem is the training not of Indian officials but of Indian electorates, 414 — Responsibility essential to such training. Its bilateral character, 415 — Why training in local government is insufficient, 415 — The spheres of

local and political government distinguished, 416 The London County Council contrasted with Wales, Prince Edward Island, or Rhode Island, 417 The distinction as illustrated by Indian conditions, 417 Taxation, 418 District settlements, 418 Position of present administrators contrasted with that of future ministers, 419 The Hindu and Urdu issue, 420 The Lieut. Governor's decision, 420 Distinction of influence and government, 421 Why the Lieut. Governor's decision was accepted, 421 Such decisions as made by responsible ministers, 422 Apparent superiority of autocratic decisions really superficial, 423 Basic reasons in favour of popular decisions explained, 423 Analogy of division of food in a regiment, 424 Justice the product of opportunities for injustice, 424 The issue between efficiency and character at stake in the war, 424 In the end character produces efficiency, 425 Through efficiency be sacrificed to produce character, 426 My views deprecated by Sir Courtenay Ilbert, 427 My reply, 427 Principle of responsible government universal, however applied, 428 Ilbert's idea that of the Munro-Morley reforms, 428 As illustrated in the decision over the Hindu Urdu controversy, 428 Further progress now possible only by transferring such decisions to Indian electorates, 429 Increase of powers with the growth of electorates, 429 Freedom of progress for each community, 430 Need for clearness and precision of thought in Englishmen, 430 The faculty of final decision must be transferred to Indians, 430 Freedom a human ideal, 431 Its potency in creating character, 431 Develop ment of Indian reform on basis of experience, 431 No limits can be fixed to such development, 432 Paramount necessity of clearly defined responsibility for paternal as well as popular government, 432.

LETTER XI. Extremists and how they meet, 432 Reasons for opposition to dyarchy by Nationalists, 432 By Europeans, 433 Why full responsible government in the provinces means full responsible government in the Government of India, 433 Transfer of police control discussed, 433 Acquisition of police control by provinces means full responsible government for India, 434 Which at this stage is barred by Pronouncement, 435 Disorder as a danger to the progress of responsible government, 435 Consequent danger of argument that gradual transfer of powers to popular governments is impossible, 436 Political training in local government inadequate, 436 Argument for a bolder advance at this stage, 437 Danger of rejecting dyarchy as a principle, 438 Objections to novel expedients disproved by experience, 439.

LETTER XII. Principles of representation, 439 Principles only can be settled at this stage, 439 Framing of the rolls, Need of a wide electorate, 440 Delimitation of constituencies, Proportional representation as a remedy for communal representation, 440 Its mischievous effects, 441 Slavery in America, Plea for a time-limit, 441 Franchisees must depend on the powers transferred in each province, 442 The fundamental principle of enfranchisement, 442 Which commissioners must be left to apply, 443.

LETTER XIII. The question of an Upper House, 443 Upper House desired by land-holders, 443 Reasons against conceding this demand, 444 A possible concession, 444.

LETTER XIV. Executive functions, 445 Administrative and Legislative functions distinguished, 445 Administrative functions classified for successive transfers, 445.

LETTER XV. Structure of the Executive, 447 Procedure in creating the first ministries, 447 The cabinet and executive council, Relations of Chief Commissioner and Ministers, 447 Chief Commissioner must not endorse illegal decisions, The Veto, Announcement of policy by ministers,

local and political government distinguished, 416 — The London County Council contrasted with Wales, Prince Edward Island, or Rhode Island, 417 — The distinction as illustrated by Indian conditions, 417 — Taxation, 418 — District settlements, 418 — Position of present administrators contrasted with that of future ministers, 419 — The Hindi and Urdu issue, 420 — The Lieut. Governor's decision, 420 — Distinction of influence and government, 421 — Why the Lieut. Governor's decision was accepted, 421 — Such decisions as made by responsible ministers, 422 — Apparent superiority of autocratic decisions really superficial, 423 — Basic reasons in favour of popular decisions explained, 423 — Analogy of division of food in a regiment, 423 — Justice the product of opportunities for injustice, 424 — The issue between efficiency and character at stake in the war, 424 — In the end character produces efficiency, 425 — Though efficiency be sacrificed to produce character, 426 — My views deprecated by Sir Courtenay Ilbert, 427 — My reply, 427 — Principle of responsible government universal, however applied, 428 — Ilbert's ideal that of the Minto-Morley reforms, 428 — As illustrated in the decision over the Hindi-Urdu controversy, 428 — Further progress now possible only by transferring such decisions to Indian electorates, 429 — Increase of powers with the growth of electorates, 429 — Freedom of progress for each community, 430 — Need for clearness and precision of thought in Englishmen, 430 — The faculty of final decision must be transferred to Indians, 430 — Freedom a human ideal, 431 — Its potency in creating character, 431 — Development of Indian reform on basis of experience, 431 — No limits can be fixed to such development, 432 — Paramount necessity of clearly defined responsibility for paternal as well as popular government, 432.

LETTER XI. Extremists and how they meet, 432 — Reasons for opposition to dyarchy by Nationalists, 432 — By Europeans, 433 — Why full responsible government in the provinces means full responsible government in the Government of India, 433 — Transfer of police control discussed, 433 — Acquisition of police control by provinces means full responsible government for India, 434 — Which at this stage is barred by Pronouncement, 435 — Disorder as a danger to the progress of responsible government, 435 — Consequent danger of argument that gradual transfer of powers to popular governments is impossible, 436 — Political training in local government inadequate, 436 — Argument for a bolder advance at this stage, 437 — Danger of rejecting dyarchy as a principle, 438 — Objections to novel expedients disproved by experience, 439.

LETTER XII. Principles of representation, 439 — Principles only can be settled at this stage, 439 — Framing of the rolls, 440 — Need of a wide electorate, 440 — Delimitation of constituencies, 440 — Proportional representation as a remedy for communal representation, 440 — Its mischievous effects, 441 — Slavery in America. Plea for a time-limit, 441 — Franchisees must depend on the powers transferred in each province, 442 — The fundamental principle of enfranchisement, 442 — Which commissioners must be left to apply, 443.

LETTER XIII. The question of an Upper House, 443 — Upper House desired by land-holders, 443 — Reasons against conceding this demand, 444 — A possible concession, 444.

LETTER XIV. Executive functions, 445 — Administrative and Legislative functions distinguished, 445 — Administrative functions classified for successive transfers, 445.

LETTER XV. Structure of the Executive, 447 — Procedure in creating the first ministries, 447 — The cabinet and executive council. Relations of Chief Commissioner and ministers, 447 — Chief Commissioner must not endorse illegal decisions. The Veto. Announcement of policy by ministers,

448 — Chief Commissioner's duties in sphere of reserved powers, 448 — Assumption of functions by ministers, 449 — The permanent civil service commission to supervise transfer of officers, 449 — Estrangement of British officials and Indian politicians, Transvaal experience, 450 — No opportunities for officials, 450 — Charge that I. C. S. will block the scheme controverted, 450.

LETTER XVI. Legislative powers, 451 — Acquisition of municipal powers in England by local legislation, 451 — This procedure and its advantages, 452 — Generalization of results by Government, 452 — Application of this method to social reform in India, 452 — Which requires legislation, 453 — Government opposition to reform of marriage law, 453 — Government attitude to social reform criticized, 454 — Enabling legislation promoted by social reformers the remedy, 456 — Utility of enabling bills in defining spheres of central and provincial governments, 457 — And in discovering new sources of revenue, 457 — Data thus obtainable for final constitution of India, 457.

LETTER XVII. Co-ordination of provincial and state governments, 458 — Indian members on executive councils, 458 — Future governors from self governing colonies, 458 — Promotion of members of I. C. S. to self governing colonies, 458 — Legislative procedure in sphere of reserved powers, 459 — Checks and controls over transferred powers deprecated, 460 — Frictions can only be minimized, 460 — Police and schools, 460 — A method of conciliation, 460.

LETTER XVIII. Finance and control, 461 — Self taxation essential, 461 — Argument for periodic settlements, 462 — Audit, 462 — Borrowing, 462 — Suspensory power, 463 — Periodic commissions of inquiry, 463 — Suspensory power favourable to progress, 464 — Transferred powers to be increased by periodic transfers and enabling Bills, 464.

LETTER XIX. Conclusion, 465 — Increase in political responsibility must accompany improved education, 465 — Freedom as the school of responsibility, 465 — Inspiring nature of England's task, 466.

IX

INTRODUCTION TO THE ENGLISH EDITION OF 'LETTERS TO THE PEOPLE OF INDIA ON RESPONSIBLE GOVERNMENT' . . . 467-471

Origin of book explained, 467 — Reasons for outside inquiry, 468 — Methods adopted, 469 — Origin of joint address, 469 — Reason for English publication, 471 — The two alternative principles, 471 — Necessity for and difficulties of immediate action. Parliamentary congestion, 472 — Need for Parliamentary inquiry, 473 — And for hearing of Indian evidence, 474 — A formula for testing schemes suggested, 475 — Need for cancelling responsibility even though it may be abused, 475 — And also for periodic inquiries, 476.

X

LETTER TO THE TIMES . . . 477-481

Attempts to invalidate the Pronouncement, 477 — Its origin, 477 — Its importance in Indian eyes, 478 — Its parliamentary authority, 478 — Its effect on our position at the Peace Conference, 478 — Pledges as to time, 479 — Importance of appointing committees on franchise and powers, 480 — Danger of violating pledges by mere inaction, 481.

The first part of the paper deals with the general properties of the polymer, such as the molecular weight, the degree of polymerization, and the distribution of molecular weights. The second part of the paper deals with the specific properties of the polymer, such as the glass transition temperature, the melting point, and the crystallinity. The third part of the paper deals with the mechanical properties of the polymer, such as the tensile strength, the elongation at break, and the impact strength. The fourth part of the paper deals with the thermal properties of the polymer, such as the thermal stability, the thermal conductivity, and the thermal expansion coefficient. The fifth part of the paper deals with the electrical properties of the polymer, such as the electrical conductivity, the dielectric constant, and the dielectric loss. The sixth part of the paper deals with the optical properties of the polymer, such as the refractive index, the absorption coefficient, and the transmission coefficient. The seventh part of the paper deals with the chemical properties of the polymer, such as the reactivity, the stability, and the degradation. The eighth part of the paper deals with the biological properties of the polymer, such as the biocompatibility, the biodegradability, and the cytotoxicity. The ninth part of the paper deals with the environmental properties of the polymer, such as the biodegradability, the biocompatibility, and the cytotoxicity. The tenth part of the paper deals with the economic properties of the polymer, such as the cost, the availability, and the market demand.

IX

INTRODUCTION TO THE ENGLISH EDITION OF 'LETTERS TO THE PEOPLE OF INDIA ON RESPONSIBLE GOVERNMENT' . . . 467-470

Origin of book explained, 467 — Reasons for outside inquiry, 468 — Methods adopted, 469 — Origin of joint address, 469 — Reason for English publication, 471 — The two alternative principles, 471 — Necessity for and difficulties of immediate action. Parliamentary congestion, 472 — Need for Parliamentary inquiry, 473 — And for hearing of Indian evidence, 473 — A formula for testing schemes suggested, 475 — Need for concealing responsibility even though it may be abused, 475 — And also for periodic inquiries, 476.

X

LETTER TO THE TIMES . . . 477-481

Attempts to invalidate the Pronouncement, 477 — Its origin, 477 — Its importance in Indian eyes, 478 — Its parliamentary authority, 478 — Its effect on our position at the Peace Conference, 476 — Pledges as it time, 479 — Importance of appointing committees on franchise and powers, 480 — Danger of violating pledges by mere inaction, 481.

XI

MEMORANDUM OF EVIDENCE BEFORE JOINT
SELECT COMMITTEE 482-552

Question 1, 482 — Importance of affirming authority of Parliament, 482 — Responsible government defined, 482 — Importance of delimiting functions, 482 — Motive governing evidence, 483 — Pronouncement should be incorporated in preamble of Bill, 483 — Date of granting full responsible government cannot be fixed, 485 — A test of India's fitness suggested, 485 — Anglo-Indian tendency to belittle Parliament, 485 — Importance of passing the Bill at once, 486 — My amendments urged subject to this consideration, 487.

Questions 2, 3, and 4, 487 — Dyarchy preferable to the Minto-Morley principle, 488 — Elected members should control transferred powers, but in reserved powers be advisory only, 488 — This principle violated in Bengal legislature, 488 — Complete responsible government in provinces premature, 489.

Questions 5, 6, and 7, 489 — Origin of Duke Memorandum, 489 — My letter to Mr. Basu, 490 — My Indian studies and criticisms thereon, 490 — The Joint Address, 491 — The question of areas used as basis of attack on Joint Address, 491 — Failure of Viceroy and Secretary of State to attempt revision of areas regretted, 492 — That question cannot be reconsidered now, 492 — Except in cases of Sind, Orissa, 493, Assam, 496, and the frontier strip, 497.

Question 8 (i), 498 — Proposal to make ministers individually responsible to their constituents only criticized, 499 — Confusion of ideas underlying proposal to put salaries of ministers on the estimates, 500 — Ministers must stand or fall together, 501 — Minister's salaries should be fixed by legislature, 502 — They need not be whole-time men, 502 — Corporate responsibility, 503 — Dyarchy in self-governing federations, 504 — Objections to dyarchy, 504 — Answered in Joint Report, 505 — But the report runs away from its own argument, 506 — Executive councillors and ministers cannot pose as a single government, 507 — There must be two executives and unity in each, 508 — Safer to emphasize the dualism than to mask it, 509 — The education controversy in Ontario, 509 — Difficulties of demarkation, 509 — Orders issued by Executive Council and by ministers should be clearly distinguished by marks, 510 — Avoid masking dualism, 510 — Legislature when dealing with reserved powers should be clearly distinguished from legislature when dealing with transferred powers, 511 — Corporate responsibility of ministers should be instituted at once, 511 — Dualism or multipleism inside ministries unworkable, 512 — In practice ministers must act in unity, 512 — Ordinary procedure should be followed in forming ministries, 513.

Question 8 (ii) — Powers of ministers should be absolute subject to suspension, 514 — Importance of clearly defined responsibility, 514 — Ministers should accept consequences if their measures lead to disorder, 514 — Weakness of our government in India and need of strengthening it, 515 — Safeguards to suspensory power, 515 — Governors should be recalled for failing to use powers as well as for abusing them, 515 — Transfer of higher education approved, 516 — Suspensory power as an aid to progress, 516 — Mr. Montagu's view of powers as irrevocably transferred deprecated, 516.

Question 8 (iii), 516 — Composition of executive councils, 516.

Question 8 (iv), 517. Power of dissolution, 517.

XI

MEMORANDUM OF EVIDENCE BEFORE JOINT
SELECT COMMITTEE 482-552

Question 1, 482 — Importance of affirming authority of Parliament, 482 — Responsible government defined, 482 — Importance of delimiting functions, 482 — Motive governing evidence, 483 — Pronouncement should be incorporated in preamble of Bill, 483 — Date of granting full responsible government cannot be fixed, 485 — A test of India's fitness suggested, 485 — Anglo-Indian tendency to belittle Parliament, 485 — Importance of passing the Bill at once, 486 — My amendments urged subject to this consideration, 487.

Questions 2, 3, and 4, 487 — Dyarchy preferable to the Minto-Morley principle, 488 — Elected members should control transferred powers, but in reserved powers be advisory only, 488 — This principle violated in Bengal legislature, 488 — Complete responsible government in provinces premature, 489.

Questions 5, 6, and 7, 489 — Origin of Duke Memorandum, 489 — My letter to Mr. Basu, 490 — My Indian studies and criticisms thereon, 490 — The Joint Address, 491 — The question of areas used as basis of attack on Joint Address, 491 — Failure of Viceroy and Secretary of State to attempt revision of areas regretted, 492 — That question cannot be reconsidered now, 492 — Except in cases of Sind, Orissa, 493, Assam, 496, and the frontier strip, 497.

Question 8 (i), 498 — Proposal to make ministers individually responsible to their constituents only criticized, 499 — Confusion of ideas underlying proposal to put salaries of ministers on the estimates, 500 — Ministers must stand or fall together, 501 — Minister's salaries should be fixed by legislature, 502 — They need not be whole-time men, 502 — Corporate responsibility, 503 — Dyarchy in self-governing federations, 504 — Objections to dyarchy, 504 — Answered in Joint Report, 505 — But the report runs away from its own argument, 506 — Executive councillors and ministers cannot pose as a single government, 507 — There must be two executives and unity in each, 508 — Safer to emphasize the dualism than to mask it, 509 — The education controversy in Ontario, 509 — Difficulties of demarkation, 509 — Orders issued by Executive Council and by ministers should be clearly distinguished by marks, 510 — Avoid masking dualism, 510 — Legislature when dealing with reserved powers should be clearly distinguished from legislature when dealing with transferred powers, 511 — Corporate responsibility of ministers should be instituted at once, 511 — Dualism or multipleism inside ministries unworkable, 512 — In practice ministers must act in unity, 512 — Ordinary procedure should be followed in forming ministries, 513.

Question 8 (ii) — Powers of ministers should be absolute subject to suspension, 514 — Importance of clearly defined responsibility, 514 — Ministers should accept consequences if their measures lead to disorder, 514 — Weakness of our government in India and need of strengthening it, 515 — Safeguards to suspensory power, 515 — Governors should be recalled for failing to exercise powers as well as for abusing them, 515 — Transfer of higher education approved, 516 — Suspensory power as an aid to progress, 516 — Mr. Montagu's view of powers as irrevocably transferred deprecated, 516.

Question 8 (iii), 516 — Composition of executive councils, 516.

Question 8 (iv), 517. Power of dissolution, 517.

- Question 9, 517 — Influence and control distinguished, 517 — Powers must be commensurate to duties, 518 — Responsibility of executive councils for reserved powers must be final, 518 — Joint Report speaks with two voices, 519 — Its argument in favour of clear responsibility to Parliament, 519 — This argument ignored in the scheme for grand committees, 522 — Joint Report contrasted with Durham's Report, 524 — A plea for giving adequate powers to the Governor-in-Council, 525 — Evidence of Mr. Banerjee, 525 — And of Mr. Sastri, 526 — Lord Carmichael's opinion, 526 — Mr. Aiyar's evidence in favour of giving governors power to legislate, 527 — Cornwall Lewis on the danger of mock parliaments, 529 — The word ordinance used as a bogey, 530 — Mischievous results of official vote, 531 — How to reconcile legislative power of governor with advisory function of elected councils, 531 — This system at present applied to supply, 531 — Governor, not Executive Council, should have final legislative power, 532 — Advantages of method above described, 532 — Governors from outside the services, 532 — Assimilation of provinces in status, 532 — Governors must be chosen on their merits, 533 — And be open to the Dominions, 533 — Dominion governorships should be opened to I.C.S., 533 — Legislative council should be called 'Assembly' when dealing with transferred subjects, and elect its own speaker, 533 — President of legislative council, 533 — Distinctive legislative formulae, 534 — The joint or separate purse, 534 — Reasons for avoiding concurrent jurisdiction in finance, 534 — The provincial settlements, 535 — Equally strong reasons for settlements between Executive Council and ministers, 535 — Danger of joint purse, 536 — Possibility of separating revenues, 536 — Abandonment of land revenue by Government of India, 537 — No legislative authority for these remissions, 538 — Inadequate treatment of subject by Montagu Chelmsford report, 539 — Question of the permanent settlement, 539 — Land-revenue reductions should be discussed in legislative councils, 540 — Funds for education derivable from land-revenue, 541 — The separate purse essential to induce self-taxation, 541 — The point illustrated from the history of local government in the Transvaal, 541 — The joint purse an attempt to reintroduce Congress League scheme, 542 — Mr. Footnam's compromise recommended, 542 — Constitutional changes should be recommended by advisers independent of Government of India, 543 — Recommendations as to separate purse summarized, 543.
- Questions 11, 12, 13, and 14, 543 — Dyarchy must begin in provincial not in central government, 544 — Council of state criticized, 544 — Dependence on official vote prevents adequate enlargement of Indian legislature, 544 — Direct election advised, 545 — Council of state not even popular, 545 — Likely to be reactionary, 546.
- Question 15, 546 — Viceroy should cease to be bound by his Executive Council, 546.
- Question 16, 546 — Not answered, 546.
- Question 17, 546 — Fresh transfer of powers should be made only by Parliament on report of the decennial commission, 547.
- Question 18, 547 — Need for Parliamentary revolutions on matters of policy not definable in the Bill, 547.
- Question 19, 547 — Views on reports of Southborough Committees, 547 — Committee on Home Administration, 548 — I.C.S. and India Office staff should be interchangeable, 548 — Fiscal policy, 548 — Cost of India Office, 548 — Schedule of recommendations, 549.
- APPENDIX A. Report of the Joint Select Committee, 553.
- APPENDIX B. Government of India Act, 1919, 573.

Question 9, 517 — Influence and control distinguished, 517 — Powers must be commensurate to duties, 518 — Responsibility of executive councils for reserved powers must be final 518 — Joint Report speaks with two voices, 519 — Its argument in favour of clear responsibility to Parliament, 519 — This argument ignored in the scheme for grand committees, 522 — Joint Report contrasted with Durham's Report, 524 — A plea for giving adequate powers to the Governor-in-Council, 525 — Evidence of Mr. Banerjee, 525 — And of Mr. Sastri, 526 — Lord Carmichael's opinion, 526 — Mr. Aiyar's evidence in favour of giving governors power to legislate, 527 — Cornwall Lewis on the danger of mock parliaments, 529 — The word ordinance used as a bogey, 530 — Mischievous results of official vote, 531 — How to reconcile legislative power of governor with advisory function of elected councils, 531 — This system at present applied to supply, 531 — Governor, not Executive Council, should have final legislative power, 532 — Advantages of method above described, 532 — Governors from outside the services, 532 — Assimilation of provinces in status, 532 — Governors must be chosen on their merits, 533 — And be open to the Dominions, 533 — Dominion governorships should be opened to I. C. S., 533 — Legislative council should be called 'Assembly' when dealing with transferred subjects, and elect its own speaker, 533 — President of legislative council, 533 — Distinctive legislative formulae, 534 — The joint or separate purse, 534 — Reasons for avoiding concurrent jurisdiction in finance, 534 — The provincial settlements, 535 — Equally strong reasons for settlements between Executive Council and ministers, 535 — Dangers of joint purse, 536 — Possibility of separating revenues, 536 — Abandonment of land revenue by Government of India, 537 — No legislative authority for these remissions, 538 — Inadequate treatment of subject by Montagu-Chelmsford report, 539 — Question of the permanent settlement, 539 — Land-revenue reductions should be discussed in legislative councils, 540 — Funds for education derivable from land-revenue, 541 — The separate purse essential to induce self-taxation, 541 — The point illustrated from the history of local government in the Transvaal, 541 — The joint purse an attempt to reintroduce Congress League scheme, 542 — Mr. Foottham's compromise recommended, 542 — Constitutional changes should be recommended by advisers independent of Government of India, 543 — Recommendations as to separate purse summarized, 543.

Questions 11, 12, 13, and 14, 543 — Dyarchy must begin in provincial not in central government, 544 — Council of state criticized, 544 — Dependence on official vote prevents adequate enlargement of Indian legislature, 544 — Direct election advised, 545 — Council of state not even popular, 545 — Likely to be reactionary, 546.

Question 15, 546 — Viceroy should cease to be bound by his Executive Council, 546.

Question 16, 546 — Not answered, 546.

Question 17, 546 — Fresh transfer of powers should be made only by Parliament on report of the decennial commission, 547.

Question 18, 547 — Need for Parliamentary resolutions on matters of policy not definable in the Bill, 547.

Question 19, 547 — Views on reports of Southborough Committee, 547 — Committee on Home Administration, 548 — I. C. S. and India Office staff should be interchangeable, 548 — Fiscal policy, 548 — Cost of India Office, 548 — Schedule of recommendations, 549.

APPENDIX A. Report of the Joint Select Committee, 553.

APPENDIX B. Government of India Act, 1919, 573.

INTRODUCTION

§ 1. THE measure passed in the closing weeks of last year brought to a decision the issues raised by the pronouncement on Indian policy made by the Imperial Government in August 1917. Ten, twenty, and thirty years hence, Parliament will send commissions to India to review the results. Their reports showing how far hopes and fears expressed in advance have been verified in practice should remove many things from the region of guess work and prove valuable additions to political science. The arguments for and against the principle upon which the Government of India Act, 1919, is based are scattered through vast numbers of official dispatches, proceedings of committees, debates in Parliament, and writings in the Press. After many years the future commissions may find some difficulty in collecting and digesting all these papers. As most of the leading points will be found argued in the documents contained in this volume, I have availed myself of the generous offer of the Oxford University Press to place them on record in this form.

§ 2. These papers may also be of use to young civil servants and to future governors who, without previous knowledge of India, are called on to work the new system. To be understood, the Government of India Act, 1919, must be studied with a knowledge of the facts as they were before the changes were made. In Papers IV, V, and VI these facts are stated in outline. The papers are printed in the order in which they were produced ; but inquirers approaching the subject with no previous knowledge would, perhaps, do well to read these studies of Indian government before turning to I, II and III, which presume some knowledge of the facts they contain.

§ 3. Those who can see in the new reforms little but a road to the ruin of England's greatest achievements in India

INTRODUCTION

§ 1. THE measure passed in the closing weeks of last year brought to a decision the issues raised by the pronouncement on Indian policy made by the Imperial Government in August 1917. Ten, twenty, and thirty years hence, Parliament will send commissions to India to review the results. Their reports showing how far hopes and fears expressed in advance have been verified in practice should remove many things from the region of guess work and prove valuable additions to political science. The arguments for and against the principle upon which the Government of India Act, 1919, is based are scattered through vast numbers of official dispatches, proceedings of committees, debates in Parliament, and writings in the Press. After many years the future commissions may find some difficulty in collecting and digesting all these papers. As most of the leading points will be found argued in the documents contained in this volume, I have availed myself of the generous offer of the Oxford University Press to place them on record in this form.

§ 2. These papers may also be of use to young civil servants and to future governors who, without previous knowledge of India, are called on to work the new system. To be understood, the Government of India Act, 1919, must be studied with a knowledge of the facts as they were before the changes were made. In Papers IV, V, and VI these facts are stated in outline. The papers are printed in the order in which they were produced ; but inquirers approaching the subject with no previous knowledge would, perhaps, do well to read these studies of Indian government before turning to I, II and III, which presume some knowledge of the facts they contain.

§ 3. Those who can see in the new reforms little but a road to the ruin of England's greatest achievements in India

have pointed to myself as the author of the mischief. The papers here printed together with the facts noted in this introduction will enable these personal questions to be seen, for what they are worth, in truer perspective. They show that the principle of dyarchy was evolved by much anxious thought and inquiry brought to bear on a great problem by a large number of people possessed of a knowledge and experience to which the writer of most of them could not pretend. My own part in the matter was to build a continuous channel in which information drawn from a large number of sources could collect. For evil results which may follow I have no desire to escape any blame which is due. But at least the reader will see that pains were taken to verify facts and test theories, before conclusions were offered for public consideration.

§ 4. The first part of the story is told in great detail in *A Letter to the People of India* (printed as Paper II) and need not be repeated here. A reader approaching the question from the angle of history may prefer to read it at once before perusing the rest of this introduction.

I

§ 5. It is necessary to explain why 'the Duke Memorandum' (printed as Paper I) is so called, and why it has never been published before. In the autumn of 1915 some friends with first-hand knowledge of India undertook to help me in the study of the subject upon which I was engaged by answering questions. This group, which met once a fortnight in London, included men like Sir William Duke, and the late Sir Lionel Abrahams, who was then in charge of financial questions at the India Office.

§ 6. The object to which the inquiry was directed is shown in the first paragraph of the letter addressed to Mr. Bhupendra Nath Basu, which appears on p. 97 of this volume.

'The subject which I am trying to study is the relation of India to the rest of the Empire—the place which India

have pointed to myself as the author of the mischief. The papers here printed together with the facts noted in this introduction will enable these personal questions to be seen, for what they are worth, in truer perspective. They show that the principle of dyarchy was evolved by much anxious thought and inquiry brought to bear on a great problem by a large number of people possessed of a knowledge and experience to which the writer of most of them could not pretend. My own part in the matter was to build a continuous channel in which information drawn from a large number of sources could collect. For evil results which may follow I have no desire to escape any blame which is due. But at least the reader will see that pains were taken to verify facts and test theories, before conclusions were offered for public consideration.

§ 4. The first part of the story is told in great detail in *A Letter to the People of India* (printed as Paper II) and need not be repeated here. A reader approaching the question from the angle of history may prefer to read it at once before perusing the rest of this introduction.

I

§ 5. It is necessary to explain why 'the Duke Memorandum' (printed as Paper I) is so called, and why it has never been published before. In the autumn of 1915 some friends with first-hand knowledge of India undertook to help me in the study of the subject upon which I was engaged by answering questions. This group, which met once a fortnight in London, included men like Sir William Duke, and the late Sir Lionel Abrahams, who was then in charge of financial questions at the India Office.

§ 6. The object to which the inquiry was directed is shown in the first paragraph of the letter addressed to Mr. Bhupendra Nath Basu, which appears on p. 97 of this volume.

'The subject which I am trying to study is the relation of India to the rest of the Empire—the place which India

ought to occupy in a reconstructed Commonwealth after the war. I began, as you know, by studying the relations of the self-governing Dominions to the rest of the Commonwealth and have published certain conclusions on the subject. This part of the problem is comparatively simple because the Dominions are, so far as their national affairs are concerned, like separate clocks each with their own mainspring in themselves. It is possible, therefore, to consider their future place in the larger mechanism of the whole Commonwealth without reference to any changes in their own internal structure. India, on the other hand, has not as yet attained this domestic independence, though there are an increasing number of Indians who desire to attain it. At present the mainspring of your domestic government is closely connected and, in fact, identical with the mainspring which works the mechanism of the Commonwealth as a whole. This mainspring is the Imperial Parliament. Hence it is impossible to study any change in the mechanism of the Imperial Government without reference to the effect that such changes would have on the internal government of India. Herein lies the greatest difficulty which the student of the subject has to face.'

§ 7. My first questions were framed to elicit an accurate account of the position in India as it stood at the moment. The process by which the legislative councils had developed, and how by the Minto-Morley reforms they had come to include elected members, who in the case of Bengal were an actual majority, was explained to me. I learned that the Nationalist leaders were now demanding a decisive majority of elected members in all the legislative councils, as a recognition of the active part which India was taking in the war.

Political reform, however, was not a thing to be granted as the price of services rendered in the war. On the other hand, the attitude taken by Indians in the war proved, in the judgement of my friends, that the country was riper than had been supposed for a further instalment of reform. And if this was so, the one course more certainly fatal than any other was to do nothing. Long before the war political life in India had begun to move; and the appeal which the British Commonwealth had made against German designs fell to the ground unless England fostered such movement.

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

[illegible]

100

The first step in the process is to identify the problem. This involves gathering information about the situation and the people involved. Once the problem is identified, the next step is to analyze it. This involves breaking the problem down into its components and understanding how they are related. The third step is to develop a plan. This involves deciding on the best way to solve the problem and the resources that will be needed. The fourth step is to implement the plan. This involves putting the plan into action and monitoring the progress. The final step is to evaluate the results. This involves assessing the effectiveness of the solution and making any necessary adjustments.

ought to occupy in a reconstructed Commonwealth after the war. I began, as you know, by studying the relations of the self-governing Dominions to the rest of the Commonwealth and have published certain conclusions on the subject. This part of the problem is comparatively simple because the Dominions are, so far as their national affairs are concerned, like separate clocks each with their own mainspring in themselves. It is possible, therefore, to consider their future place in the larger mechanism of the whole Commonwealth without reference to any changes in their own internal structure. India, on the other hand, has not as yet attained this domestic independence, though there are an increasing number of Indians who desire to attain it. At present the mainspring of your domestic government is closely connected and, in fact, identical with the mainspring which works the mechanism of the Commonwealth as a whole. This mainspring is the Imperial Parliament. Hence it is impossible to study any change in the mechanism of the Imperial Government without reference to the effect that such changes would have on the internal government of India. Herein lies the greatest difficulty which the student of the subject has to face.'

§ 7. My first questions were framed to elicit an accurate account of the position in India as it stood at the moment. The process by which the legislative councils had developed, and how by the Minto-Morley reforms they had come to include elected members, who in the case of Bengal were an actual majority, was explained to me. I learned that the Nationalist leaders were now demanding a decisive majority of elected members in all the legislative councils, as a recognition of the active part which India was taking in the war.

Political reform, however, was not a thing to be granted as the price of services rendered in the war. On the other hand, the attitude taken by Indians in the war proved, in the judgement of my friends, that the country was riper than had been supposed for a further instalment of reform. And if this was so, the one course more certainly fatal than any other was to do nothing. Long before the war political life in India had begun to move; and the appeal which the British Commonwealth had made against German designs fell to the ground unless England fostered such movement.

Clearly India must move ; but whither ? It was dangerous and useless to discuss practical steps until we were clear in our minds as to what was the end towards which those steps were directed. In plain terms what was the goal of England's policy in India ?

§ 8. To this question which I pressed, the answer given was 'self-government'. There was general agreement on that point, but when the term self-government was examined it was found to cover a number of different and quite incompatible projects of reform. This analysis of the word self-government is fully developed on p. 357, and need not be repeated in this introduction. The only meaning of self-government as a goal which bore the test of examination was responsible government for India within the Commonwealth on lines which could not stop short of those by which the Dominions had reached their present position. For the purpose of the inquiry it was therefore agreed to assume responsible government as the goal towards which India should be consciously and earnestly helped by her rulers.

§ 9. That India could not advance, as the Dominions had advanced, by one step to full responsible government was generally accepted. To reiterate reasons for a view adopted by Parliament, by every agent commissioned by Parliament to examine the subject, and also by the more responsible leaders of the Nationalist movement is unnecessary. Indian electorates trained to the task of assuming the final decisions which now rest on the British electorate were essential foundations of real responsible government. In the various Dominions such electorates were in visible being when responsible government was granted. In India they had to be created, and could not be called into being with a stroke of the pen. The essence of the problem was how to create them.

§ 10. To create electorates, to render the executive dependent on their votes, and yet to leave them irresponsible for the task with which the executives were charged was clearly no step in the direction of responsible government.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Abstract

[illegible]

1000

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

1. **Identify the main topic or purpose of the document.**
 2. **Summarize the key points or findings.**
 3. **Highlight any important details or conclusions.**
 4. **Provide a clear and concise overview of the content.**
 5. **Ensure the summary is easy to understand and accessible.**

1. **Identify the main topic of the text.**
 2. **Summarize the main points of the text.**
 3. **Identify the author's purpose in writing the text.**
 4. **Identify the author's tone in writing the text.**
 5. **Identify the author's audience in writing the text.**
 6. **Identify the author's main argument or thesis.**
 7. **Identify the author's supporting evidence or examples.**
 8. **Identify the author's conclusion or final statement.**
 9. **Identify the author's main point or message.**
 10. **Identify the author's main purpose or goal.**

1. **Introduction**
 2. **Background**
 3. **Methodology**
 4. **Results**
 5. **Conclusion**

Clearly India must move ; but whither ? It was dangerous and useless to discuss practical steps until we were clear in our minds as to what was the end towards which those steps were directed. In plain terms what was the goal of England's policy in India ?

§ 8. To this question which I pressed, the answer given was 'self-government'. There was general agreement on that point, but when the term self-government was examined it was found to cover a number of different and quite incompatible projects of reform. This analysis of the word self-government is fully developed on p. 357, and need not be repeated in this introduction. The only meaning of self-government as a goal which bore the test of examination was responsible government for India within the Commonwealth on lines which could not stop short of those by which the Dominions had reached their present position. For the purpose of the inquiry it was therefore agreed to assume responsible government as the goal towards which India should be consciously and earnestly helped by her rulers.

§ 9. That India could not advance, as the Dominions had advanced, by one step to full responsible government was generally accepted. To reiterate reasons for a view adopted by Parliament, by every agent commissioned by Parliament to examine the subject, and also by the more responsible leaders of the Nationalist movement is unnecessary. Indian electorates trained to the task of assuming the final decisions which now rest on the British electorate were essential foundations of real responsible government. In the various Dominions such electorates were in visible being when responsible government was granted. In India they had to be created, and could not be called into being with a stroke of the pen. The essence of the problem was how to create them.

§ 10. To create electorates, to render the executive dependent on their votes, and yet to leave them irresponsible for the task with which the executives were charged was clearly no step in the direction of responsible government.

But this was the inevitable outcome of a further advance on the lines traced by the Minto-Morley reforms. It would give the electorates power to paralyse government at every turn, but no power, and no responsibility, therefore, of conducting government for themselves. Such a step would mean the training of electorates and those they elected in irresponsible action. On analysis it proved to be nothing but a step away from the goal proposed.

§ 11. On these further conclusions agreement was reached. But what was the alternative? The question reduced to this point led on to the suggestion of a principle to which the term *dyarchy* has since been applied. Could not provincial electorates through legislatures and ministers of their own be made clearly responsible for certain functions of government to begin with, leaving all others in the hands of executives responsible as at present to the Government of India and the Secretary of State? Indian electorates, legislatures, and executives would thus be given a field for the exercise of genuine responsibility. From time to time fresh powers could be transferred from the old governments as the new elective authorities developed and proved their capacity for assuming them. Powers already transferred could also be recalled whenever elective authorities had shown themselves unable to exercise them properly.

This proposal of course presumed the coexistence of two authorities in the same areas, the one responsible for certain specified functions to local electorates, the other, as at present, for all other functions to the British electorate through their agents the Secretary of State and the Government of India.

§ 12. By all the members of the gathering who had actual experience of Indian administration this suggestion when first broached was at once rejected as without precedent and dangerously inapplicable to Indian conditions. Most if not all the arguments against it which were afterwards raised in India were suggested at these meetings. The proposal was definitely set aside, and the gathering returned to the task of searching the field for some line of advance

the following table, which shows the results of the examination of the bones of the various races, and the number of specimens of each race which have been examined. The table is arranged in the following order:—(1) The bones of the various races, (2) the number of specimens of each race which have been examined, (3) the results of the examination of the bones of each race, and (4) the number of specimens of each race which have been examined.

The results of the examination of the bones of the various races, and the number of specimens of each race which have been examined, are given in the following table. Powers already transferred could also be recalled whenever elective authorities had shown themselves unable to exercise them properly.

This proposal of course presumed the coexistence of two authorities in the same areas, the one responsible for certain specified functions to local electorates, the other, as at present, for all other functions to the British electorate through their agents the Secretary of State and the Government of India.

§ 12. By all the members of the gathering who had actual experience of Indian administration this suggestion when first broached was at once rejected as without precedent and dangerously inapplicable to Indian conditions. Most if not all the arguments against it which were afterwards raised in India were suggested at these meetings. The proposal was definitely set aside, and the gathering returned to the task of searching the field for some line of advance

which would not, like the Minto-Morley reforms, mean that executives responsible for government would be gradually deprived of the power to govern.

§ 13. The efforts devoted to this object were barren of results, other than that of confirming the conviction of the searchers that a further advance on the path marked by the Minto-Morley reforms was a step over the precipice and a plunge towards anarchy. This failure to find an alternative at length forced the gathering to consider whether the objections to dyarchy were really insuperable. If the principle were indeed novel, so was the situation to which it was applied. It might further be argued that a problem without precedent could only be solved by an expedient of a similar kind. It was also pointed out that a new principle of government could not be properly examined if left in the air. Before the reasons against it could be tested, the principle must be reduced to a definite scheme and considered in detail. So I urged that one of the members of the group, with lifelong experience of Indian conditions, should assume the position of a technical expert charged by a government with the task of reducing a principle, for which he was asked to take no personal responsibility, to the best scheme his knowledge would enable him to shape. A response to this challenge came from Sir William Duke, the last member of the I.C.S. to hold the Lieutenant-Governorship of Bengal. As a member of the Council of India he still had the facts at his fingers' ends, so he undertook to see whether he could formulate a scheme for the government of Bengal on the principle of specific devolution, the term used in these discussions. Dyarchy, as we shall see, was a name applied to it later in India. So Sir William Duke produced a scheme, which was printed and circulated to the members of the gathering. With a workmanlike plan before them they were then in a position to consider how far the obvious objections to dyarchy could be minimized in practice to the point of safety. They retired to the seclusion of Oxford, and in the old bursary of Trinity College spent three days in a detailed discussion of Sir

The first of these is the fact that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The second point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The third point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The fourth point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The fifth point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The sixth point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The seventh point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The eighth point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The ninth point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

The tenth point is that the majority of the specimens are from the same locality, and that the majority of the specimens are from the same individual. This is a very important point, as it shows that the specimens are not from different individuals, but from the same individual.

which would not, like the Minto-Morley reforms, mean that executives responsible for government would be gradually deprived of the power to govern.

§ 13. The efforts devoted to this object were barren of results, other than that of confirming the conviction of the searchers that a further advance on the path marked by the Minto-Morley reforms was a step over the precipice and a plunge towards anarchy. This failure to find an alternative at length forced the gathering to consider whether the objections to dyarchy were really insuperable. If the principle were indeed novel, so was the situation to which it was applied. It might further be argued that a problem without precedent could only be solved by an expedient of a similar kind. It was also pointed out that a new principle of government could not be properly examined if left in the air. Before the reasons against it could be tested, the principle must be reduced to a definite scheme and considered in detail. So I urged that one of the members of the group, with lifelong experience of Indian conditions, should assume the position of a technical expert charged by a government with the task of reducing a principle, for which he was asked to take no personal responsibility, to the best scheme his knowledge would enable him to shape. A response to this challenge came from Sir William Duke, the last member of the I.C.S. to hold the Lieutenant-Governorship of Bengal. As a member of the Council of India he still had the facts at his fingers' ends, so he undertook to see whether he could formulate a scheme for the government of Bengal on the principle of specific devolution, the term used in these discussions. Dyarchy, as we shall see, was a name applied to it later in India. So Sir William Duke produced a scheme, which was printed and circulated to the members of the gathering. With a workmanlike plan before them they were then in a position to consider how far the obvious objections to dyarchy could be minimized in practice to the point of safety. They retired to the seclusion of Oxford, and in the old bursary of Trinity College spent three days in a detailed discussion of Sir

William Duke's draft. The draft was then completely recast by its author in the light of this discussion.

§ 14. With the results so reached and embodied in the memorandum now first given to the public in this volume, it is safe to say that none of the group were greatly enamoured. The best that could be said of it was that after the most careful analysis of the situation made during months of discussion, with the best technical information before them, they had failed to discover any less dangerous alternative. This experience is worth mentioning because it was afterwards repeated at every stage, both in India, and when the Reform Bill came up for final examination by the Imperial Government, and by the Joint Committee of Lords and Commons in London. Every responsible group of advisers in turn felt its novelty and its dangers. By some of them it was rejected with seeming finality. But when they came to examine the alternatives, either to leave the situation as it stood, or to change it on the line of other proposals, the dangers incidental to all these courses were found to be even greater. As with the informal gathering in London in the early months of 1916, they were all, with the exception of certain heads of provinces, driven back, however reluctantly, to the conclusion that the novel expedient of dyarchy was the least dangerous of the suggestions advanced. The alternative proposal of the heads of provinces was examined with the utmost solicitude by Lord Selborne's Committee in the light of evidence in its favour given by one of its authors, and was finally rejected as involving in a worse and more insidious form the principle of dualism alleged as an objection to the scheme embodied in the Bill before Parliament.

§ 15. In the ordinary course the scheme as formulated in the Duke Memorandum was intended for circulation amongst the Round Table groups in various parts of the British Commonwealth for study and criticism. The results of their labours would then have been sent to me and used in my treatment of the Imperial problem on its Indian side. In this case the document, like others previously circulated

the following: (1) the general character of the culture; (2) the degree of civilization; (3) the degree of social organization; (4) the degree of religious belief; (5) the degree of artistic achievement; (6) the degree of scientific achievement; (7) the degree of political achievement; (8) the degree of economic achievement; (9) the degree of moral achievement; (10) the degree of intellectual achievement.

The first of these is the general character of the culture. This is determined by the degree of civilization, the degree of social organization, the degree of religious belief, the degree of artistic achievement, the degree of scientific achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement. The second is the degree of civilization. This is determined by the degree of social organization, the degree of religious belief, the degree of artistic achievement, the degree of scientific achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement. The third is the degree of social organization. This is determined by the degree of religious belief, the degree of artistic achievement, the degree of scientific achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement.

The fourth is the degree of religious belief. This is determined by the degree of artistic achievement, the degree of scientific achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement. The fifth is the degree of artistic achievement. This is determined by the degree of scientific achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement. The sixth is the degree of scientific achievement. This is determined by the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement.

The seventh is the degree of political achievement. This is determined by the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement. The eighth is the degree of economic achievement. This is determined by the degree of moral achievement, and the degree of intellectual achievement.

The ninth is the degree of moral achievement. This is determined by the degree of intellectual achievement. The tenth is the degree of intellectual achievement. This is determined by the degree of moral achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement.

The degree of moral achievement is determined by the degree of intellectual achievement. The degree of political achievement is determined by the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement. The degree of economic achievement is determined by the degree of moral achievement, and the degree of intellectual achievement. The degree of moral achievement is determined by the degree of intellectual achievement. The degree of intellectual achievement is determined by the degree of moral achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement.

The degree of intellectual achievement is determined by the degree of moral achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement.

The degree of moral achievement is determined by the degree of intellectual achievement. The degree of political achievement is determined by the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement. The degree of economic achievement is determined by the degree of moral achievement, and the degree of intellectual achievement. The degree of moral achievement is determined by the degree of intellectual achievement. The degree of intellectual achievement is determined by the degree of moral achievement, the degree of political achievement, the degree of economic achievement, the degree of moral achievement, and the degree of intellectual achievement.

William Duke's draft. The draft was then completely recast by its author in the light of this discussion.

§ 14. With the results so reached and embodied in the memorandum now first given to the public in this volume, it is safe to say that none of the group were greatly enamoured. The best that could be said of it was that after the most careful analysis of the situation made during months of discussion, with the best technical information before them, they had failed to discover any less dangerous alternative. This experience is worth mentioning because it was afterwards repeated at every stage, both in India, and when the Reform Bill came up for final examination by the Imperial Government, and by the Joint Committee of Lords and Commons in London. Every responsible group of advisers in turn felt its novelty and its dangers. By some of them it was rejected with seeming finality. But when they came to examine the alternatives, either to leave the situation as it stood, or to change it on the line of other proposals, the dangers incidental to all these courses were found to be even greater. As with the informal gathering in London in the early months of 1916, they were all, with the exception of certain heads of provinces, driven back, however reluctantly, to the conclusion that the novel expedient of dyarchy was the least dangerous of the suggestions advanced. The alternative proposal of the heads of provinces was examined with the utmost solicitude by Lord Selborne's Committee in the light of evidence in its favour given by one of its authors, and was finally rejected as involving in a worse and more insidious form the principle of dualism alleged as an objection to the scheme embodied in the Bill before Parliament.

§ 15. In the ordinary course the scheme as formulated in the Duke Memorandum was intended for circulation amongst the Round Table groups in various parts of the British Commonwealth for study and criticism. The results of their labours would then have been sent to me and used in my treatment of the Imperial problem on its Indian side. In this case the document, like others previously circulated

under the title of Round Table studies, would gradually have acquired a semi-public character.

In view of references made to this scheme by an official witness before the Joint Select Committee,¹ it is as well to state why it never became public in this manner. Speaking in the House of Lords on December 12, 1919, Lord Crewe said,

‘I hope I am committing no breach of confidence—and I do not know whether I very much care if I am—in saying that I know from personal knowledge that before Lord Chelmsford went out to India in 1916 he had become clearly convinced in his own mind, from conversations he had had with those competent to give opinions and from his own reflections on the matter, that it would be necessary at once to make an announcement of the character which was made in 1917—namely that this country was looking forward to an advance in India with responsible government as the goal.’

Lord Chelmsford was anxious before making such announcement to have in his mind some clear idea of the changes required to give effect to it. While he was governor of New South Wales, a Round Table group had been formed at Sydney, and hearing that this organization in London was studying the question of India he courteously asked to see the results. This was just after the completion of Sir William Duke's first draft. From Lord Chelmsford's request it was clear that he looked on the problem as one which required his early attention, and the meeting at Oxford felt that he might be embarrassed by the circulation at this juncture of novel ideas which they themselves regarded as purely tentative. On my friends' advice, I decided, therefore, not to circulate the memorandum to the Round Table groups, but merely to communicate it when revised in the light of the discussions at Oxford to Lord Chelmsford in response to his request.

§ 16. In the meantime I had come to realize that any attempt to deal with the Indian side of the Imperial

‘I hope I am committing no breach of confidence—and I do not know whether I very much care if I am—in saying that I know from personal knowledge that before Lord Chelmsford went out to India in 1916 he had become clearly convinced in his own mind, from conversations he had had with those competent to give opinions and from his own reflections on the matter, that it would be necessary at once to make an announcement of the character which was made in 1917—namely that this country was looking forward to an advance in India with responsible government as the goal.’

Lord Chelmsford was anxious before making such announcement to have in his mind some clear idea of the changes required to give effect to it. While he was governor of New South Wales, a Round Table group had been formed at Sydney, and hearing that this organization in London was studying the question of India he courteously asked to see the results. This was just after the completion of Sir William Duke's first draft. From Lord Chelmsford's request it was clear that he looked on the problem as one which required his early attention, and the meeting at Oxford felt that he might be embarrassed by the circulation at this juncture of novel ideas which they themselves regarded as purely tentative. On my friends' advice, I decided, therefore, not to circulate the memorandum to the Round Table groups, but merely to communicate it when revised in the light of the discussions at Oxford to Lord Chelmsford in response to his request.

§ 16. In the meantime I had come to realize that any attempt to deal with the Indian side of the Imperial

¹ *Proceedings of the Joint Select Committee on the Government of India Bill*, vol. ii, question 651.

problem without seeing the conditions for myself would be dangerous and absurd. I decided to treat any conclusions reached in the manner described as merely preparatory to a study of the facts at first hand. So immediately after the Oxford meeting I left England for India via Canada, New Zealand, and Australia, without waiting to see the final draft of the memorandum as revised by Sir William Duke. It was dispatched to Lord Chelmsford in May 1916, and reached me in Canada later. When in 1917 Mr. Montagu's visit to India was announced, and provincial governments were asked to prepare their proposals, the memorandum was reprinted by the Government of India and circulated with other papers for their information. It came to be known in official circles as the Duke Memorandum, but has never been published in any form. It is here placed on record as the first paper in which the principle underlying the present constitution of India was reduced to tangible shape.

§ 17. The manner in which this principle was evolved in the private studies of a few individuals has been the subject of some criticism which was voiced by Colonel Yate in the House of Commons and also by Lord Amphil in the House of Lords. On December 16, 1919, Lord Amphil remarked :

'The incredible fact is that, but for the chance visit to India of a globe-trotting doctrinaire, with a positive mania for constitution mongering, nobody in the world would ever have thought of so peculiar a notion as that of "Dyarchy". And yet the Joint Committee tells us in an airy manner that no better plan can be conceived.'

A careful study of the report may suggest that the committee deserves this reproach less than its critic. Evidence was taken upon every aspect of the problem, and subsequent debates in the House showed that the opinions of members had been changed in the process. It is difficult to conceive inquiries more searching and impartial than those to which the principle of dyarchy was submitted. Whether it provides a real solution experience alone can show. It must first

problem without seeing the conditions for myself would be dangerous and absurd. I decided to treat any conclusions reached in the manner described as merely preparatory to a study of the facts at first hand. So immediately after the Oxford meeting I left England for India via Canada, New Zealand, and Australia, without waiting to see the final draft of the memorandum as revised by Sir William Duke. It was dispatched to Lord Chelmsford in May 1916, and reached me in Canada later. When in 1917 Mr. Montagu's visit to India was announced, and provincial governments were asked to prepare their proposals, the memorandum was reprinted by the Government of India and circulated with other papers for their information. It came to be known in official circles as the Duke Memorandum, but has never been published in any form. It is here placed on record as the first paper in which the principle underlying the present constitution of India was reduced to tangible shape.

§ 17. The manner in which this principle was evolved in the private studies of a few individuals has been the subject of some criticism which was voiced by Colonel Yate in the House of Commons and also by Lord Amphilh in the House of Lords. On December 16, 1919, Lord Amphilh remarked :

'The incredible fact is that, but for the chance visit to India of a globe-trotting doctrinaire, with a positive mania for constitution mongering, nobody in the world would ever have thought of so peculiar a notion as that of "Dyarchy"'. And yet the Joint Committee tells us in an airy manner that no better plan can be conceived.'

A careful study of the report may suggest that the committee deserves this reproach less than its critic. Evidence was taken upon every aspect of the problem, and subsequent debates in the House showed that the opinions of members had been changed in the process. It is difficult to conceive inquiries more searching and impartial than those to which the principle of dyarchy was submitted. Whether it provides a real solution experience alone can show. It must first

be tried ; it is to be tried ; and its warmest advocates will wisely hold their judgement in suspense till that trial is complete. The point which critics like Lord Amptthill have to face is that a succession of inquiries have led to the same point. So far as human intelligence has been able to foresee, in advance of further experience, the principle of dyarchy is the necessary outcome of the position as stated in the pronouncement of August 1917. For the purpose of the private inquiry above described, the principle of that pronouncement was assumed in 1915, and my own opinion is that any other set of inquirers, in seeking an answer to the question framed in this manner, would have reached and formulated the principle of dyarchy as the obvious solution. What matters, when a principle is suggested, is not whether it is new or old, still less who was the first to suggest it, but whether it is applicable to the problem in hand, or in plain words, whether the principle is a real one. The only final and conclusive test is to try it in practice. But no pains should be spared to detect counterfeit principles, not only before they are tried, but before the public is asked to consider them. An invention should not be placed on the market until it has been tested by every expedient available to the inventor. And one test is always available to those who advocate principles embodied in phrases. Their first business is to ask themselves how the principle would work out when applied in practice. And the answer should always be reduced to writing ; for to estimate correctly the products of his own brain the thinker must make them objective. What right, for instance, has any one to air a phrase like 'self-determination' as a principle of political conduct, until he has asked himself how he would apply it to cases like Ireland, Ulster, the Aaland Islands, Newfoundland, Egypt, or the Southern States in the time of Lincoln? Submitted to these tests the phrase would be found to beg two questions in as many words, whether the community in question is a separate political unit, and if so whether it is entitled to determine issues affecting other political units as well as itself. It presumes the right of

 significant contribution to the field.

each to do as he pleases, regardless of the consequence to others, reduces the world to anarchy, strikes at the principle of freedom, and is in a word no principle at all. Before publicists advocate the rights of man, at least let them frame a schedule of those rights. What precipitate of genuine principle would President Wilson have found at the bottom of his fourteen points, had they first been submitted to this acid test? How often at Paris must he have wished that he had had them reviewed in the light of the facts before they were stated? Reluctance to face the labour involved in seeing how phrases sort with facts is responsible for human misery beyond measure. 'A froward retention of custom' is no greater impediment to progress than hypnotic catchwords—clues patently false which lead whole nations into quagmires.

§ 18. But wherever new ideas relate to projects of constitutional reform, which cannot be brought into operation until reduced to the form of laws, the preliminary tests open to inquirers are far more effective. The first of these tests is to see whether a scheme of reform can be drafted on the principle proposed. The second is to see whether the scheme will bear drafting into a Bill. As readers of this volume will see, some care was taken to apply the first of these tests, and also to see that the facts were studied with some thoroughness. And not until this had been done were any results offered for public criticism. If any apology is due for these schemes it is not to Lord Amphil, but rather to the public, that they were not before publication reduced by a legal draftsman to legislative form. The excuse must be that events were moving so rapidly that time was never available for this test.

II

§ 19. I went to India to gather information and collect some friends, British and Indian, to join in these studies as in the Dominions. No idea of taking part in its controversies while there had entered my head. The event was otherwise, and *A Letter to the People of India* (Paper II)

The first part of the paper discusses the importance of the research and the objectives of the study. It then presents a literature review of the existing research on the topic. The second part of the paper describes the methodology used in the study, including the data collection and analysis techniques. The third part of the paper presents the results of the study, and the fourth part discusses the conclusions and implications of the findings.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

is here reprinted to explain the reason. A private letter I had written was abstracted and widely circulated in the crowds attending the Indian National Congress and the All-India Muslim League at Lucknow in the last days of 1916. The publication of this letter raised a storm which raged for months in the press and the legislative council and was even the subject of questions in the House of Commons. I decided to wait till the storm had blown itself out, and then to place all the facts on record with such completeness as to make superfluous any further reference to these personal questions. This accounts for the somewhat meticulous character of the narrative contained in the first part of this paper.

§ 20. There were, however, things to be said which, led to the seclusion of a private student, I should not have been called upon to say while in India. Placed as I now was by the controversy under an obligation of addressing every man who could read English on questions personal to myself I felt that those things should be said, if only to reveal public attention to the issues which really mattered at a critical moment. With that object in view the latter part of this paper was written.

§ 21. If this private letter had not been abstracted and published it is highly probable that I should have left India as I intended, without taking any part in the controversies then distracting the country. My studies of Indian government privately circulated would scarcely have attracted public notice. The results when afterward published in England would probably have come too late to affect practical issues, so rapid had been the movement of events. As it was, the publicity forced upon me by this controversy led to a demand for these studies greater than I could meet by private circulation, with the result that I had to reprint and place them on public sale. They attracted the attention of British and Indian moderates in Bengal, who invited my assistance in framing a scheme for submission to the Secretary of State. I was then asked to defend the scheme in a series of letters. The inclusion of

this paper in the series is thus necessary to explain the character of those which followed it.

For convenience of reference a copy of the manifesto as settled between the Indian National Congress and the All India Muslim League at Lucknow in December 1916 is appended to this paper.

III

§ 22. When I came to India I was fully prepared to find reasons why a line of constitutional development, which had everywhere else led to a deadlock might still be the best under Indian conditions. I was equally prepared to find the objections to dyarchy raised in England and reinforced with immense detail and knowledge in India, were indeed insuperable. It was nothing but a theory upon which to conduct research. But six months of inquiry on the spot only confirmed the conviction that a further advance on the path traced by the Minto-Morley reforms would lead to disaster. And no one was able to suggest an alternative less dangerous or difficult than dyarchy.

These impressions were at length brought to a head in a long conversation I had with Mr. Bhupendra Nath Basu, when the Indian Legislative Council of which he was a member was in session at Delhi. He was one of the authors of the Congress League scheme adopted at Lucknow in the previous December, in which the Nationalists called for a declaration that self-government was the goal of British policy in India, and defined the steps which they asked should be taken as the logical outcome of the Minto-Morley reforms. My case was that if the Congress and League meant responsible government, their scheme was a step in the opposite direction. I then suggested the principle of dyarchy and sketched a scheme for applying it.

§ 23. Mr. Basu was unconvinced, but afterwards put a question in a letter which decided me to reduce the argument to writing, for criticism by the various friends with whom I had discussed it. For the reasons given above I was not at liberty to circulate the Duke Memorandum.

The first of these is the fact that the human race is not a homogeneous mass, but is divided into many distinct groups, each with its own characteristics. These groups are known as races, and they are distinguished from one another by their physical and mental qualities. The second fact is that the human race is not stationary, but is constantly changing. This change is due to the fact that the human race is subject to the same laws of evolution as the other animals of the world. The third fact is that the human race is not isolated, but is in constant contact with other races. This contact leads to the exchange of ideas and the development of new cultures.

THE HUMAN RACE

THE HUMAN RACE is a subject of great interest to the anthropologist. It is a subject which has attracted the attention of many of the greatest minds of the world. The human race is a subject which is full of mystery and wonder. It is a subject which is full of problems and questions. The human race is a subject which is full of hope and promise. The human race is a subject which is full of life and energy. The human race is a subject which is full of beauty and grace. The human race is a subject which is full of power and strength. The human race is a subject which is full of love and compassion. The human race is a subject which is full of all the good things of the world.

The human race is a subject which is full of mystery and wonder. It is a subject which is full of problems and questions. The human race is a subject which is full of hope and promise. The human race is a subject which is full of life and energy. The human race is a subject which is full of beauty and grace. The human race is a subject which is full of power and strength. The human race is a subject which is full of love and compassion. The human race is a subject which is full of all the good things of the world.

The human race is a subject which is full of love and compassion. The human race is a subject which is full of all the good things of the world.

But I now had sufficient knowledge of the system of government in India, and in particular of its mechanism in the United Provinces, to enable me to formulate a scheme in terms of that province. For much of the information afterwards embodied in Papers IV, V, and VI was already collected in my notes. Warned by previous experience I drafted the scheme in the form of a letter to Mr. Basu as a recognized nationalist leader, and proposed in the letter to circulate it to others, so that any one into whose hands it fell might see that no object was in view other than a dispassionate study by all parties concerned.

§ 24. In this letter the argument in favour of direct inquiry by parliamentary committees was first developed. The word 'dyarchy' also appears for the first time.¹ The credit of finding this singularly apt name for the principle was due to a member of the Government of India, the eminent scholar Sir William Meyer. It had passed into currency in official circles as a term indicating a principle which found little acceptance. Here it has met with some disfavour at the hands of politicians and writers in the press. It appears in Murray's dictionary as a recognized word. Professor Oman informed the House of Commons that Mommsen coined it, and pleaded that journalists and the clerks of parliament should cease to spell it with an 'i' without regard to its derivation from the Greek words *δύω* and *ἀρχή*. The word is just as sound as monarchy though not of course its correlative. Attempts have also been made to appropriate the term to the Montagu-Chelmsford scheme. In these papers where it first appeared in print I was careful to use it to signify the principle in distinction from any of the schemes in which it is embodied. In political discussion precision of language is a public interest of greater importance than spelling, and the writer who first uses a term in print may lay some claim to limit its meaning. Throughout these papers, mostly written before the word was used and abused in England, dyarchy is employed to signify nothing but a principle which, as I repeatedly argued, might be

Abstract

Abstract

1000

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

[illegible]

1000

embodied in any number of different schemes. Confusion will be saved by general agreement to use it in this way and in no other.

§ 25. In revising the rough draft of the letter to Mr. Basu I must acknowledge the debt owed to the advice of Sir Valentine Chirol, of Mr. W. M. Hailey, the present Finance Member of the Government of India, then Chief Commissioner of Delhi, and also of the officer at that time his personal assistant. This is not to say that any of these gentlemen accepted the principle as the right or indeed a possible road to reform. Mr. Hailey's view, which was shared by the others, was that as the only visible alternative to the Minto-Morley principle it ought to receive the most careful examination, for which purpose it must first be put into a workmanlike shape. In preparing the final draft they gave the author, who was, and still is, a novice in Indian affairs, the kind of assistance which only men with experience of a lifetime behind them can render.

In studying the mechanics of government I had from the nature of the case to rely largely on information furnished by Indian Civil Servants who are masters of the subject. Officials had every reason to regard me much as the Agents of the Company in the eighteenth century regarded an interloper. Yet at every turn members of this body, so often represented as an engine of pure reaction, placed their knowledge and sorely-burdened time at the service of the task upon which I was engaged. Without that assistance neither this letter nor the four papers which follow it could have been prepared; and this was conspicuously true of the Joint Address drafted in Calcutta. The point is not how far members of the service agreed with the doctrines set forth in these papers, though some of them afterwards came to do so. The point is that they thought that these doctrines, however contrary to their own ideas or professional interests, ought to be considered on their merits, and willingly afforded the assistance, information, and advice without which the writer could scarcely have given them a shape which deserved such consideration.

embodied in any number of different schemes. Confusion will be saved by general agreement to use it in this way and in no other.

§ 25. In revising the rough draft of the letter to Mr. Basu I must acknowledge the debt owed to the advice of Sir Valentine Chirol, of Mr. W. M. Hailey, the present Finance Member of the Government of India, then Chief Commissioner of Delhi, and also of the officer at that time his personal assistant. This is not to say that any of these gentlemen accepted the principle as the right or indeed a possible road to reform. Mr. Hailey's view, which was shared by the others, was that as the only visible alternative to the Minto-Morley principle it ought to receive the most careful examination, for which purpose it must first be put into a workmanlike shape. In preparing the final draft they gave the author, who was, and still is, a novice in Indian affairs, the kind of assistance which only men with experience of a lifetime behind them can render.

In studying the mechanics of government I had from the nature of the case to rely largely on information furnished by Indian Civil Servants who are masters of the subject. Officials had every reason to regard me much as the Agents of the Company in the eighteenth century regarded an interloper. Yet at every turn members of this body, so often represented as an engine of pure reaction, placed their knowledge and sorely-burdened time at the service of the task upon which I was engaged. Without that assistance neither this letter nor the four papers which follow it could have been prepared; and this was conspicuously true of the Joint Address drafted in Calcutta. The point is not how far members of the service agreed with the doctrines set forth in these papers, though some of them afterwards came to do so. The point is that they thought that these doctrines, however contrary to their own ideas or professional interests, ought to be considered on their merits, and willingly afforded the assistance, information, and advice without which the writer could scarcely have given them a shape which deserved such consideration.

§ 26. Again and again fears have been expressed to me by my Indian friends that the reforms will be rendered abortive by the powerful hostility of the Indian Civil Service. The spontaneous loyalty shown by its members to the cause of candid inquiry in advance is surely the best answer to those fears. They laboured to secure an authoritative judgement on merits and facts, even though that judgement might prove contrary to their own. That such men should afterwards labour to nullify the judgement as delivered and ratified by supreme authority is contrary to nature. I do not hesitate to say that if once my Indian friends and those of the I.C.S. could come to see each other as they became known to me the Indian problem would be solved. My dearest wish was to leave gatherings in India where Indians, European officials, and business men would regularly meet in personal intercourse to thresh out the problems of the country in which they are all essential factors—that such meetings might be the rule, not contrary to rule. But in that hope I was disappointed. Men with the interests at heart not only of India but of the British Commonwealth, whose differences lie in words rather than in things, are kept apart by a cloud of misapprehension. It is pierced at points by individuals whose friendship and mutual esteem bring them together. And in good time the cloud will disperse and reveal three orders of men to each other in their true character of allies and friends. Between all that is best of the British in India and of Indian nationalism there remains no wall but only the phantom of a wall, which will presently vanish.

§ 27. The letter was dispatched to Mr. Basu early in April. A number of copies were then typed and sent for criticism to various friends, British and Indian. But the applications for further copies became so numerous that it had to be printed after the circulation of Paper IV in its original form. Paper IV was originally called 'Indian Studies No. 1'. So the letter when printed was called 'Indian Studies No. 2'. These numbers have no further significance, so the letter is here printed in the order in which it was composed.

§ 26. Again and again fears have been expressed to me by my Indian friends that the reforms will be rendered abortive by the powerful hostility of the Indian Civil Service. The spontaneous loyalty shown by its members to the cause of candid inquiry in advance is surely the best answer to those fears. They laboured to secure an authoritative judgement on merits and facts, even though that judgement might prove contrary to their own. That such men should afterwards labour to nullify the judgement as delivered and ratified by supreme authority is contrary to nature. I do not hesitate to say that if once my Indian friends and those of the I.C.S. could come to see each other as they became known to me the Indian problem would be solved. My dearest wish was to leave gatherings in India where Indians, European officials, and business men would regularly meet in personal intercourse to thresh out the problems of the country in which they are all essential factors—that such meetings might be the rule, not contrary to rule. But in that hope I was disappointed. Men with the interests at heart not only of India but of the British Commonwealth, whose differences lie in words rather than in things, are kept apart by a cloud of misapprehension. It is pierced at points by individuals whose friendship and mutual esteem bring them together. And in good time the cloud will disperse and reveal three orders of men to each other in their true character of allies and friends. Between all that is best of the British in India and of Indian nationalism there remains no wall but only the phantom of a wall, which will presently vanish.

§ 27. The letter was dispatched to Mr. Basu early in April. A number of copies were then typed and sent for criticism to various friends, British and Indian. But the applications for further copies became so numerous that it had to be printed after the circulation of Paper IV in its original form. Paper IV was originally called 'Indian Studies No. 1'. So the letter when printed was called 'Indian Studies No. 2'. These numbers have no further significance, so the letter is here printed in the order in which it was composed.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Comments on the Letter to Mr. Bhupendra Nath Basu

§ 28. In the months following the circulation of this letter volumes of criticism were received from those to whom it was sent. In July a selection was made from the mass and printed, with the prefatory note which appears on p. 125, for circulation to friends who had taken this trouble. This circulation never took place, but copies as well as the original letter were before the Indian and provincial governments, and Mr. Montagu after his arrival. The future student of Indian reforms will find nearly every point afterwards discussed in official papers raised by the authors of these comments. The principle of dyarchy had not at the time become a subject of public controversy. In these circumstances and writing to one who had no official capacity of any kind it is probable that the writers expressed their opinions with more detachment than was possible later in official inquiries.

IV, V, and VI

§ 29. As stated above I had collected in notes a mass of information on the structure of Indian government. In May I began to embody them in memoranda which, when printed, were circulated to the wide circle of friends from whom the information was drawn. They were asked to write their corrections and comments on the blank leaves with which the printed pages were interleaved.

§ 30. The text of these papers as now printed differs considerably from that issued in 1917, for the excellent quality of much of the comment received compelled wholesale revision. The corrections have been embodied in the text, and the comments so far as possible have been given in the footnotes and appendices. The assistance of Lord Meston in revising the proofs of No. IV, which largely relates to the United Provinces, of which he was then Lieut.-Governor, must be gratefully acknowledged.

§ 31. Official literature concerning India is most voluminous. But because it is all written by experts for experts

The following information is provided for the purpose of providing a general overview of the information contained in the document. It is not intended to be a substitute for the full document.

§ 30. The text of these papers as now printed differs considerably from that issued in 1917, for the excellent quality of much of the comment received compelled wholesale revision. The corrections have been embodied in the text, and the comments so far as possible have been given in the footnotes and appendices. The assistance of Lord Meston in revising the proofs of No. IV, which largely relates to the United Provinces, of which he was then Lieut.-Governor, must be gratefully acknowledged.

§ 31. Official literature concerning India is most voluminous. But because it is all written by experts for experts

it is for the student, whose life has been spent elsewhere not equally informing. For one thing, official parlance is full of terms which contain no clue to their real meaning. The Reports of the Royal Commission on Decentralization in 1909 and of the Civil Service Commission issued in 1917 covered the whole structure of Indian government. From a study of these volumes, however, the outsider would find it difficult to get such a grasp of the subject as would enable him to describe with insight and lucidity the machinery of Indian government to an English public school. To this rule the Montagu-Chelmsford report is a brilliant exception. But it was not available then. In my own experience I found that the only way to master the subject was by questioning the men who worked the mechanism. And even so, as the notes to these papers show, the accounts given are sometimes difficult to harmonize; for practice varies not merely in provinces but also in divisions and districts. If these papers have any value for ordinary readers it arises from the fact that they are not written by an expert but by one who had to discover the facts and explain them to himself. They give, as I hope, an intelligible and accurate picture of the system as it was before the reforms were introduced. Such a picture is obviously necessary for an understanding of the changes effected.

VII

§ 32. On August 20, 1917, the famous pronouncement was made in the House of Commons, defining the goal of British policy in India. The operative words used were 'responsible government', not 'self-government', as demanded by the Indian National Congress and the All-Indian Muslim League. I had advocated this change in *A Letter to the People of India*,¹ but there is no reason to suppose that the pamphlet had been seen by or had influenced the authors of the pronouncement. The Imperial Cabinet was quite capable of discovering for itself the danger of relying on a formula

¹ §§ 20, 21, p. 81.

acceptable to the various parties because it could be made to cover policies which had really little in common. The same conclusion arrived at by different people may be evidence that both have been able to consider the question on its merits.

§ 33. A statement of policy at once final and clear was ultimately fatal to any further advance on the lines of the Minto-Morley reforms, though Nationalist leaders were slow to realize that its implications could not be harmonized with their own scheme. The immediate effect, however, was a controversy in the British and Indian press, conducted in Bengal with a bitterness endangering public order. Differences are always easy to emphasize, but some moderate Indians and Englishmen decided to attempt the more difficult task of finding matter for agreement. They invited my assistance in drafting a basis.

§ 34. Ultimately twelve points of agreement were settled and signed by sixty-four Europeans and by ninety Indians. These together with an address suggesting in outline a scheme of reforms based on the twelve points were submitted to the Viceroy and to Mr. Montagu on his arrival at Delhi. When they came to Calcutta to receive deputations, the attendance of the signatories was invited. The occasion was brightened by the gleam of humour, seldom absent from Anglo-Indian solemnities, and the writer still cherishes the legend officially hung on the walls of the waiting-room—'Miscellaneous body of Indians and Europeans'. To no deputation at that moment could a greater compliment have been paid.

To draft proposals on the basis of my previous studies was a simple task. The real achievement lay in the signatures obtained by the authors of the movement. I cannot from memory give a full list of those who took part in the conferences at Darjeeling and Calcutta where the twelve points were settled. Sir Krishna Gupta, Mr. P. C. Mitter, Mr. S. R. Das, Mr. B. C. Mitter, Dr. Suhrawardy, Mr. Bijoy Chatterjee, Mr. K. T. Paul on the Indian side, and Mr. Arden Wood, Mr. Pickford, and Mr. Anderson on the British side, were amongst the number. The present Lord Sinha, as

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.001	1.2	0.23
Gender of the head of household (Male = 1, Female = 0)	-0.05	0.03	-1.5	0.13
Constant	1.5	0.2	7.5	<0.001

The results indicate that the age of the head of household has a small positive effect on the number of children in the household, while the gender of the head of household has a small negative effect. The constant term is significantly positive.

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It highlights the journal's role in providing
 a platform for the dissemination of research findings and
 the advancement of the discipline. The second part of the
 paper focuses on the journal's commitment to diversity and
 inclusion. It explores the various initiatives and programs
 implemented by the journal to ensure that all voices are
 heard and that the field of management education is
 truly representative of the global community.

The first step in the process is to identify the problem. This involves gathering information about the situation and the people involved. Once the problem is identified, the next step is to analyze it. This involves breaking the problem down into its components and understanding how they are related. The third step is to develop a plan. This involves deciding on the best way to solve the problem and the resources that will be needed. The fourth step is to implement the plan. This involves putting the plan into action and monitoring the progress. The final step is to evaluate the results. This involves assessing the effectiveness of the solution and making any necessary adjustments.

acceptable to the various parties because it could be made to cover policies which had really little in common. The same conclusion arrived at by different people may be evidence that both have been able to consider the question on its merits.

§ 33. A statement of policy at once final and clear was ultimately fatal to any further advance on the lines of the Minto-Morley reforms, though Nationalist leaders were slow to realize that its implications could not be harmonized with their own scheme. The immediate effect, however, was a controversy in the British and Indian press, conducted in Bengal with a bitterness endangering public order. Differences are always easy to emphasize, but some moderate Indians and Englishmen decided to attempt the more difficult task of finding matter for agreement. They invited my assistance in drafting a basis.

§ 34. Ultimately twelve points of agreement were settled and signed by sixty-four Europeans and by ninety Indians. These together with an address suggesting in outline a scheme of reforms based on the twelve points were submitted to the Viceroy and to Mr. Montagu on his arrival at Delhi. When they came to Calcutta to receive deputations, the attendance of the signatories was invited. The occasion was brightened by the gleam of humour, seldom absent from Anglo-Indian solemnities, and the writer still cherishes the legend officially hung on the walls of the waiting-room—'Miscellaneous body of Indians and Europeans'. To no deputation at that moment could a greater compliment have been paid.

To draft proposals on the basis of my previous studies was a simple task. The real achievement lay in the signatures obtained by the authors of the movement. I cannot from memory give a full list of those who took part in the conferences at Darjeeling and Calcutta where the twelve points were settled. Sir Krishna Gupta, Mr. P. C. Mitter, Mr. S. R. Das, Mr. B. C. Mitter, Dr. Suhrawardy, Mr. Bijoy Chatterjee, Mr. K. T. Paul on the Indian side, and Mr. Arden Wood, Mr. Pickford, and Mr. Anderson on the British side, were amongst the number. The present Lord Sinha, as

a member of the Government, was unable to sign the address, but his house at Darjeeling afforded an ideal meeting place for the first gatherings, and the knowledge, firmness, and tact which he showed as their chairman laid the foundations of their ultimate success. In bridging the gulf between Europeans and Indians, Colonel Pugh revealed a positive genius for conciliation. He steered the movement with consummate skill.

§ 35. The original promoters desired that representative members of all the races and religions concerned should have an opportunity of affixing their signatures before the address was presented and published. But their purpose was frustrated by the laxity which pervades European no less than Indian circles in that country. A number of copies were in circulation during the discussions, and the text was modified from time to time to meet difficulties raised by this and that individual signatory. An obsolete copy was obtained and published by a journalist. The text as agreed by the signatories had therefore to be published by them; whereupon some spokesmen of the Congress on the one hand and of the European Association on the other took it upon themselves to declare pontifically that members of either body were precluded from signing the address whatever their private views might be. But for this incident the address might have reached the Viceroy and Secretary of State with signatures from all parts of India and not merely from Bengal. But nothing could alter the fact that in a province where feeling was most acute Hindus, Moslems, and Christians of both races had come together on common ground in the cause of better government for India, at the moment when Russia had collapsed, the Austrian armies were sweeping the Italians before them, and the fate of the British Commonwealth and its allies hung in the balance. Such was the moment chosen to embarrass an attempt to find common ground for two sections of British subjects who were drifting into dangerous antagonism. It cannot be said too often that the kind of journalism which in critical times refuses to respect the

papers of men honestly endeavouring to conciliate differences and find a common measure of agreement, so far from promoting freedom, is fatal to the conditions upon which it rests. It is certainly contrary to the sound traditions of British journalism.

VIII

§ 36. The joint address was published in November, and at once became the target of violent attacks from European and Indian extremists. It involved on the one hand a frank acceptance of responsible government as the goal. On the other it offered an alternative to the one scheme which had held the field since the Congress and League had met at Lucknow in the previous December. In the absence of any concrete proposals by the Government that scheme had flourished until the pronouncement was issued in August. Naturally its authors drifted into thinking that their scheme was as good as carried, and a kind of commentary on the forthcoming constitution had actually been published. It was out of the question that Indian public opinion could change in a few weeks their view of proposals which had been before them in concrete shape for a whole year. The authors of those proposals could not be expected to view the advent of a reasoned alternative without searchings of heart. It was, however, desirable that the alternative should stand clearly before them at the Congress to be held in Calcutta in the Christmas week of the following December, for the controversy was all on one side and tended to obscure the issue. So I undertook to deal in the press with the attacks made on the Joint Address in a series of letters which were printed and circulated to all the papers. But this method had to be abandoned when several leading journals failed to publish the letters, one actually printing controversial answers without the letters to which the answers were made. It was then decided to produce the letters in the form of a book, at considerable expense generously borne by some of the signatories. The book was published before the Congress met at Calcutta; for

little time was necessary to complete it, as much of the material was ready to hand in the 'studies' previously circulated. Some parts of these studies which contained data necessary to the argument were transferred wholesale to the letters. They are now relegated to appropriate places in one or other, to avoid repetition which becomes unnecessary now that both are printed in the same edition.

§ 37. When the Joint Address was presented I was asked by the signatories to be present. Once or twice I was sent for and interrogated privately by Lord Chelmsford and Mr. Montagu (whom I had previously met for a few minutes in London, when the subject of India was not mentioned). When the *Letters to the People of India* had been published I went to Bombay where I saw them again at their invitation to discuss the contents of the book.

§ 38. At this time a committee of the conference of Princes was considering a scheme for submission to the Viceroy and Secretary of State. It consisted of their Highnesses the Maharajas of Bikaner, Alwar, and Patiala, and His Highness the Jam of Nawanagar, in his cricketing days affectionately known to the whole English world as 'Ranji'. In December I was courteously invited by the Maharaja of Bikaner to assist the Committee then gathered at his capital. Engaged as I then was on the *Letters to the People of India* I was obliged to decline the invitation, but with infinite regret. In the previous January the Maharaja had read the letter which had brought on my head the wrath of the whole Nationalist press and invited me to his capital in an open telegram. Such an act of gratuitous chivalry to one whose name was previously unknown to the Maharaja is not lightly forgotten.

Previous engagements again prevented me from accepting a second invitation from His Highness of Alwar, with equal regret for a similar reason. But a third invitation from the Maharaja of Patiala found me at liberty. At Patiala I met Nationalist leaders from all parts of British India, and ministers of native states gathered to meet the Princes. These meetings are memorable as the first occasion upon

which representatives from the British as well as the Native territories have gathered to discuss the affairs of all India. Though no linguist and the only European present at the gathering I could follow the proceedings for the curious and significant reason that English was the only common language available to men gathered from all parts of the Indian peninsula. Such a gathering was impossible to attend without realizing the essential unity of India, which must of necessity in time be recognized in its institutions, as they come to be based on popular government.

§ 20. My next visit was to Delhi where Lord Chelmsford asked me to spend some days in his camp. The avowed reason for this invitation was that a student representing no one but himself who had given some thought to the problem under discussion could be useful as a critic. In that capacity I was freely used and did my best to discharge it thoroughly. I had come to the conclusion, however, that the period for my usefulness in India was over, and left for England at the end of February. Nothing I had heard had led me to believe that the proposals adopted would be framed on the lines suggested in my writings. And the report when I read it months after in England came as a surprise. When I left Delhi the drafting of the report had not begun.

It is necessary to record these particulars because it was afterwards suggested in the press that I had actually drafted the report. My prompt denial has not prevented a further complaint from many quarters that Lord Chelmsford and Mr. Montagu were unduly influenced by an irresponsible tourist. Beyond the arguments contained in these papers, I had no influence to wield either in England or India, where the opinion of all parties as publicly expressed was directly opposed to the principle I advocated. With the exception of Lord Chelmsford himself I was possibly the only person in India with first-hand knowledge of responsible government as applied in the Dominions to the institutions of provinces. Whether my knowledge of India entitled me to advance any views is more open to question. Of this the

reader can judge for himself. But in any case the interview were unsought by me. I merely responded to invitation courteously addressed to hundreds of others by the Viceroy and Secretary of State, who were tireless in their effort to examine every opinion supported by any pretence of knowledge before coming to conclusions of their own. The critics must find some better ground on which to attack them.

IX

§ 40. Writing to Mr. Bhupendra Nath Basu in April 1917 I had dwelt on the fact that Parliament in the days of the Company had instituted a direct inquiry into Indian affairs every twenty years, when the charter came up for renewal. I was now convinced that no scheme of reforms adequate to the needs of the situation would command assent either in India or England unless it were examined by a parliamentary committee. For without such public inquiry I did not believe that the real strength of the case against the principle of the Minto-Morley reforms, or in favour of dyarchy, would be understood. I therefore began to prepare an edition of *Letters to the People of India* for publication in London, with a preface urging that Parliament should refer the proposals of the Imperial Government to a joint select committee from both Houses with power to take evidence. This edition was published in May 1918.

X

§ 41. The Montagu-Chelmsford report was given to the public in July. From various quarters the demand was immediately raised that all further consideration of the matter should be postponed until after the war. The letter *The Times* here published as Paper X was written to counter this demand. Ignoring the agitation, the Imperial Government lost no time in dispatching to India committees recommended in the Montagu-Chelmsford report, to formulate schemes for the franchise, the separation of Indian from provincial functions, and the powers to be transferred

§ 41. The Montagu-Chelmsford report was given to the public in July. From various quarters the demand was immediately raised that all further consideration of the matter should be postponed until after the war. The letter *The Times* here published as Paper X was written to counter this demand. Ignoring the agitation, the Imperial Government lost no time in dispatching to India committees recommended in the Montagu-Chelmsford report, to formulate schemes for the franchise, the separation of Indian from provincial functions, and the powers to be transferred

responsible ministers. It was wisely decided to amalgamate these committees, as two sub-committees, under the general chairmanship of Lord Southborough. Questions of franchise were dealt with by one under Lord Southborough himself, decentralization and transferred powers by the other over which Mr. Feetham, a member of the South African legislature, presided as chairman.

§ 42. As far back as 1907 Lord Morley had appointed a Royal Commission to investigate the question, with a reference so limited that the Commission was unable to investigate the relations of the Government of India with the Secretary of State. This Commission, which reported in 1909, adduced no principles by which the spheres of the central and provincial governments could be distinguished, but advised a multitude of changes in administrative practice, codes, and statutes. The mere summary of their recommendations covered no less than fourteen pages of printed foolscap and the Government of India laboured to carry them out. But in 1918 no one pretended that the problem was solved, and it blocked the approach towards responsible government in the provinces, promised in August 1917. If another decade were required to solve it, the new project of reform would be obsolete before the solution was reached. The dangers of delay were real, and the services rendered by the sub-committee over which Mr. Feetham presided in removing them cannot be exaggerated. After a few months of inquiry in India they produced a report which the Government of India and the Joint Select Committee accepted as solving the problem. The members of the sub-committee, however, would readily admit that their achievement was only made possible because the ground for their work was cleared by the labours of the previous decade. But the situation created by the war was needed to bring those labours to fruit.

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It then moves on to discuss the importance of the
 Journal of Management Education in the field of management
 education.

Abstract

the Government asked for the appointment of a joint select committee of Lords and Commons. The spokesmen of all parties were heard, and submitted to cross examination with important results. Arguments in favour of doing nothing collapsed. Witnesses who attacked the principle of the measure were unable to produce alternatives which would bear analysis. Extremists on the other side were forced to disclose their real position by challenging the right of Parliament to decide the time and measure of the step by which the approach to responsible government should be made. This challenge the Committee answered by reasserting the sovereign position of Parliament in the preamble of the Bill. The success which attended the proceedings in fact suggests the question whether many of the evils of party government would not be avoided if legislatures devoted more time to taking evidence and less to debate. The cross-examination of witnesses may well be an instrument as useful in legislatures as it is in courts. Would successive attempts to solve the Irish question have proved so barren, if the Bills before discussion in committee had been referred to select committees empowered to hear evidence from all parties in Ireland? Questions have far more effect than debate in revealing the tendency of views which lead only to a blank wall.

In any case it is doubtful whether the measure could have been carried through both Houses in time, if ministers had not been supported from the back benches by members with a knowledge and conviction acquired in the course of hearing evidence. There is every sign that this method of handling Indian affairs has returned to stay.

§ 44. Time was the governing factor. The promise of reform had been coupled with the words 'as soon as possible' and the credit of England with India hung on this pledge. The eagerness of innumerable Indians to be heard was a danger averted only by the firmness of the Committee and of Lord Selborne whose whole conduct of the proceedings evoked admiration from all quarters. Unless the Committee reported in time the danger that the Bill would be talked

the Government asked for the appointment of a joint select committee of Lords and Commons. The spokesmen of all parties were heard, and submitted to cross examination with important results. Arguments in favour of doing nothing collapsed. Witnesses who attacked the principle of the measure were unable to produce alternatives which would bear analysis. Extremists on the other side were forced to disclose their real position by challenging the title of Parliament to decide the time and measure of the step by which the approach to responsible government should be made. This challenge the Committee answered by reasserting the sovereign position of Parliament in the preamble of the Bill. The success which attended the proceedings in fact suggests the question whether many of the evils of party government would not be avoided if legislatures devoted more time to taking evidence and less to debate. The cross-examination of witnesses may well be an instrument as useful in legislatures as it is in courts. Would successive attempts to solve the Irish question have proved so barren, if the Bills before discussion in committee had been referred to select committees empowered to hear evidence from all parties in Ireland? Questions have far more effect than debate in revealing the tendency of views which lead only to a blank wall.

In any case it is doubtful whether the measure could have been carried through both Houses in time, if ministers had not been supported from the back benches by members with a knowledge and conviction acquired in the course of hearing evidence. There is every sign that this method of handling Indian affairs has returned to stay.

§ 44. Time was the governing factor. The promise of reform had been coupled with the words 'as soon as possible' and the credit of England with India hung on this pledge. The eagerness of innumerable Indians to be heard was a danger averted only by the firmness of the Committee and of Lord Selborne whose whole conduct of the proceedings evoked admiration from all quarters. Unless the Committee reported in time the danger that the Bill would be talked

out before the end of the session was real. My evidence was requisitioned just before the Committee adjourned for its summer recess, which was in fact prolonged by the railway strike. I therefore had ample time in which to prepare, and as the questionnaire circulated to witnesses seemed to cover the whole field, I decided to give my evidence in chief in written answers to those questions and thus save the time available to the Committee for public sittings. My oral examination which took only a few hours is not printed in this volume, for it added nothing material to the memorandum.

§ 45. If other evidence were wanting this paper would show that I had had no hand in drafting the Montagu-Chelmsford report. With its argument against the principle of the Congress League scheme I was altogether at one. The gist of my criticism is that the recommendations are largely at variance with that argument. To ministers responsible to the legislature and electorate, certain functions together with the powers necessary to discharge them were to be transferred. To the Governor-in-Council all other functions, including the maintenance of order, were to be reserved; but without unquestionable power to enact whatever laws he might find necessary to discharge them. To the powers so reserved was applied the principle of divided responsibility, which in the first part of their report, its authors had found unanswerable reasons to condemn.

§ 46. Parliament, on the advice of Lord Selborne's Committee, removed this blemish by vesting in the governor final and unmistakable powers to enact by ordinance measures which the Legislative Council may refuse to pass in the shape required. This averts the certainty of dangerous deadlocks between the executive and legislature, and establishes the position that, in the sphere of the reserved powers the elected councils are advisory only.

§ 47. Personally I regret that the Committee did not prescribe a procedure frankly in harmony with the principle that the governor legislates on reserved functions, but only after listening to anything which the elected councils have

The first of these is the fact that the majority of the specimens of the new species are from the same locality, and that they are all of the same size and shape. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the genus. The second fact is that the new species is found in the same locality as the other species of the genus, and that it is found in the same stratum. This is also a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the genus. The third fact is that the new species is found in the same locality as the other species of the genus, and that it is found in the same stratum. This is also a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the genus.

The new species is found in the same locality as the other species of the genus, and it is found in the same stratum. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the genus. The new species is found in the same locality as the other species of the genus, and it is found in the same stratum. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the genus. The new species is found in the same locality as the other species of the genus, and it is found in the same stratum. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the genus.

§ 45. If other evidence were wanting this paper would show that I had had no hand in drafting the Montagu Chelmsford report. With its argument against the principle of the Congress League scheme I was altogether at one. The gist of my criticism is that the recommendations are largely at variance with that argument. To ministers responsible to the legislature and electorate, certain functions together with the powers necessary to discharge them were to be transferred. To the Governor-in-Council all other functions, including the maintenance of order, were to be reserved; but without unquestionable power to enact whatever laws he might find necessary to discharge them. To the powers so reserved was applied the principle of divided responsibility, which in the first part of their report, its authors had found unanswerable reasons to condemn.

§ 46. Parliament, on the advice of Lord Selborne's Committee, removed this blemish by vesting in the governor final and unmistakable powers to enact by ordinance measures which the Legislative Council may refuse to pass in the shape required. This averts the certainty of dangerous deadlocks between the executive and legislature, and establishes the position that, in the sphere of the reserved powers the elected councils are advisory only.

§ 47. Personally I regret that the Committee did not prescribe a procedure frankly in harmony with the principle that the governor legislates on reserved functions, but only after listening to anything which the elected councils have

to say on the details as well as on the principles of the measures proposed. In conformity with this principle measures would come before the council for advice. The advice would be given first on the principle of the measure as proposed, then on every detail, and lastly on the principle of the measure as amended. But on each point the council would be told whether the governor accepted or rejected their advice before they proceeded to the next one. On a second reading debate they might advise him that the Bill as a whole was unnecessary and unacceptable. If their arguments convinced him he would drop it. If not he would intimate that in his opinion the measure was still necessary for the discharge of the duties imposed on him, and ask them, on that assumption, to say what changes they wished to have made in the details. They would next advise amendments; and he would inform them whether he accepted or rejected each before they proceeded to formulate the next one. The text upon which subsequent amendments were to be based would thus be clear at every stage. Lastly he would ask their opinion on the Bill as amended with his consent. In the light of that advice he would finally decide whether or no to enact it. The advice of the popular spokesmen would thus be on record at every stage, and the decisions of the governor would be taken with that advice plainly before him.

The old practice is, however, retained of submitting Bills under the reserved powers to councils as if they were sovereign legislatures, in the hope that they will emerge in a form acceptable to the governor. The governor may then reject them as a whole, and supersede the legislature by enacting an ordinance of his own, which may be something different from the measure as first introduced. In plain words the governor may not legislate until he has had a definite quarrel with the elected council. It is then superseded, and no further steps are taken even to ask its advice.

§ 48. I still hope that at this stage governors may try the merits of the procedure here outlined. There is nothing to prevent a governor from asking the elected members to

to say on the details as well as on the principles of the measures proposed. In conformity with this principle measures would come before the council for advice. The advice would be given first on the principle of the measure as proposed, then on every detail, and lastly on the principle of the measure as amended. But on each point the council would be told whether the governor accepted or rejected their advice before they proceeded to the next one. On a second reading debate they might advise him that the Bill as a whole was unnecessary and unacceptable. If their arguments convinced him he would drop it. If not he would intimate that in his opinion the measure was still necessary for the discharge of the duties imposed on him, and ask them, on that assumption, to say what changes they wished to have made in the details. They would next advise amendments; and he would inform them whether he accepted or rejected each before they proceeded to formulate the next one. The text upon which subsequent amendments were to be based would thus be clear at every stage. Lastly he would ask their opinion on the Bill as amended with his consent. In the light of that advice he would finally decide whether or no to enact it. The advice of the popular spokesmen would thus be on record at every stage, and the decisions of the governor would be taken with that advice plainly before him.

The old practice is, however, retained of submitting Bills under the reserved powers to councils as if they were sovereign legislatures, in the hope that they will emerge in a form acceptable to the governor. The governor may then reject them as a whole, and supersede the legislature by enacting an ordinance of his own, which may be something different from the measure as first introduced. In plain words the governor may not legislate until he has had a definite quarrel with the elected council. It is then superseded, and no further steps are taken even to ask its advice.

§ 48. I still hope that at this stage governors may try the merits of the procedure here outlined. There is nothing to prevent a governor from asking the elected members to

meet him informally and to give their opinion on every clause, or from telling them whether he accepts or rejects it before asking their advice on the next one. If the text of an ordinance is settled in this manner the electorate will then feel that the governor has only decided against them after listening to what their spokesmen have to say on every detail. The East is used to decisions made from above. Indeed it is used to little else. But the right to be heard on every detail is dear to their hearts, and rightly so. The difficult art of deciding issues for themselves must be learned in the region of the powers transferred to the legislative councils.

§ 40. It is, however, an immeasurable gain that Lord Selborne's committee secured to the governors real power to enact the legislation required to give effect to the duties imposed on them; a power beyond question denied in the scheme as first submitted to Parliament. The strongest part of a strong report is that in which the Joint Committee affirm with emphasis that the legislative powers vested in the governor are meant to be used. There is real danger that this essential feature in the scheme may be allowed to evaporate in practice. As one of the critics points out¹ the rules framed to give effect to the Minto-Morley reforms required that every resolution of the legislative councils should be 'in the form of a specific recommendation addressed to the local government'. It was clearly intended that local governments should have before them an expression of public opinion, give effect to it if advisable in the public interest, but if not refuse to do so and give their reasons. The proper course would have been to forbid officials to vote on such resolutions, leaving them to stand as clear expressions of opinion from members representing the public. But the nerve of Government failed, and so fearful was it of being confronted with unwelcome resolutions that officials were ordered if possible to vote them down. Official members were thus presented in the guise of a political party.

¹ p. 187.

...the most common method of data collection in qualitative research is the interview. The interview is a conversation between the researcher and the participant, and it is used to explore the participant's experiences, beliefs, and attitudes. The interview can be structured, semi-structured, or unstructured. In a structured interview, the researcher asks a series of predetermined questions. In a semi-structured interview, the researcher has a list of topics to explore, but the questions are more open-ended. In an unstructured interview, the researcher has no predetermined questions and the conversation flows naturally. The choice of interview method depends on the research goals and the nature of the data being sought.

The interview is a conversation between the researcher and the participant, and it is used to explore the participant's experiences, beliefs, and attitudes. The interview can be structured, semi-structured, or unstructured. In a structured interview, the researcher asks a series of predetermined questions. In a semi-structured interview, the researcher has a list of topics to explore, but the questions are more open-ended. In an unstructured interview, the researcher has no predetermined questions and the conversation flows naturally. The choice of interview method depends on the research goals and the nature of the data being sought.

meet him informally and to give their opinion on every clause, or from telling them whether he accepts or rejects it before asking their advice on the next one. If the text of an ordinance is settled in this manner the electorate will then feel that the governor has only decided against them after listening to what their spokesmen have to say on every detail. The East is used to decisions made from above. Indeed it is used to little else. But the right to be heard on every detail is dear to their hearts, and rightly so. The difficult art of deciding issues for themselves must be learned in the region of the powers transferred to the legislative councils.

§ 40. It is, however, an immeasurable gain that Lord Selborne's committee secured to the governors real power to enact the legislation required to give effect to the duties imposed on them; a power beyond question denied in the scheme as first submitted to Parliament. The strongest part of a strong report is that in which the Joint Committee affirm with emphasis that the legislative powers vested in the governor are meant to be used. There is real danger that this essential feature in the scheme may be allowed to evaporate in practice. As one of the critics points out¹ the rules framed to give effect to the Minto-Morley reforms required that every resolution of the legislative councils should be 'in the form of a specific recommendation addressed to the local government'. It was clearly intended that local governments should have before them an expression of public opinion, give effect to it if advisable in the public interest, but if not refuse to do so and give their reasons. The proper course would have been to forbid officials to vote on such resolutions, leaving them to stand as clear expressions of opinion from members representing the public. But the nerve of Government failed, and so fearful was it of being confronted with unwelcome resolutions that officials were ordered if possible to vote them down. Official members were thus presented in the guise of a political party.

¹ p. 187.

In like manner governors wanting in the nerve to enact unpopular measures which they know in their hearts are necessary for the discharge of the duties laid on them, may be tempted to influence votes in the legislatures to avoid the necessity arising. Such methods will not avail in the end. Government by influence creates distrust, which leads to disorder, though unhappily the evil fruits are not always reaped in the time of the sower. I hope that a governor who interferes with powers clearly vested in ministers and legislative councils, or fails to support them in the execution of those powers, will be summarily recalled. But I hope no less that a governor who fails to exercise powers necessary for the due discharge of the functions reserved to him will also be recalled. Parliament has now given the clearest instructions on the subject. If obstacles to giving effect to them are imposed from above the governor should resign and publish his reasons. A man, better situated than most to judge of such matters, once said to me that resignations in India were too rare.

No government can endure unless the powers conferred on it are adequate to its functions. And this principle is never so important as when two governments are called upon to operate side by side. With the definite breakdown of one, the system, as a whole, may collapse. When I urged that ministers and legislatures should have full and unfettered power to discharge the functions imposed on them, I urged with no less insistence that the same principle must also be applied to those reserved to the Governor-in-Council. The Minto-Morley reforms were fruitful of many useful results. But where the reforms had been carried furthest, provincial executives knew that they could not obtain from the legislatures powers necessary to quell disorder. For these it was recognized that resort must be had to the clear official majority on the Indian legislature. The inevitable crisis, masked and postponed by war legislation, was dangerously developed when the return of peace obliged Government to deal with it on lines prescribed by the existing constitution. The use of the official majority on

the Indian legislature was, then, the signal for an outbreak that jeopardized reform. And unless there are governments able and competent to maintain order, the free institutions now established will never grow.

§ 50. My point is that government must have legal power to maintain order wherever it is threatened. But I want to add that it will fail utterly, and deserves to fail, unless it deals with the ultimate causes of disorder. 'India', said Lord Morley, 'is a country where bad manners are a crime.' Amongst educated Indians with whom I am acquainted there are some who are, as I feel, definitely and finally embittered against the British connexion. In every instance this bitterness had its roots in some rankling memory of insult at the hands of a European.

§ 51. In a matter of such vital importance, it is best not to rely on general language but to give specific examples. I will take the first from my own experience. Like many others I am fond of talking to guards and inspectors while waiting for a train, if only because they so often help to remind one that the qualities essential to a courteous gentleman are not limited to any one class. In one Indian station I found myself talking to a tall, grey-bearded official who might from his appearance have come straight from the platforms of Swindon or Crewe. His conversation entirely confirmed this impression, and we had passed from the war to the local crops, when a badly overcrowded train drew up and disgorged an Indian crowd far larger than the platform was built to accommodate. As the train emptied the crowd was pushed across the platform to where we were standing, till at last one Indian passenger brushed the inspector's back. It was physically impossible for anything else to happen; but without pausing in his conversation, or even looking over his shoulder, the inspector lashed out backwards with his foot, with an action exactly resembling that of a vicious mule. The contrast between this savage gesture and his perfect and natural courtesy to a fellow European was unforgettable. The Indian cowered and shrank from the kick without attempting to remonstrate;

[illegible]

The first step in the process is to identify the problem. This involves gathering information about the situation and the people involved. Once the problem is identified, the next step is to analyze it. This involves breaking the problem down into its components and understanding how they are related. The third step is to develop a plan. This involves deciding on the best way to solve the problem and the steps that need to be taken. The fourth step is to implement the plan. This involves putting the plan into action and making any necessary adjustments. The final step is to evaluate the results. This involves checking to see if the problem has been solved and if the solution was effective.

the Indian legislature was, then, the signal for an outbreak that jeopardized reform. And unless there are governments able and competent to maintain order, the free institutions now established will never grow.

but it would not the least surprise me to hear that two years later he was busy wrecking trains and murdering Europeans.

§ 52. The second example happened quite lately, and in this country, to one of my Indian friends—a Christian who did conspicuous service at the front and wears a French decoration. In France he worked on close and cordial terms with hundreds of Englishmen. One day he caught sight of a face in the street which seemed familiar, and anxious not to pass an old acquaintance unrecognized, looked again. The owner of the face turned on him and said, 'What are you looking at me for? Get out of this at once. I may tell you I come from Madras where I have thrashed a thousand of your sort.' I am glad to say that my friend refused to be cowed and stood his ground till, in spite of repeated threats of violence, the stranger had to put his pride in his pocket and take himself off.

§ 53. One could, of course, quote any number of cases in which real provocation by an Indian to a European provoked some counter indignity. I will even mention a case the exact opposite of those quoted above. An English friend of mine, who happens to share my views on this subject, asked his way of a Brahmin in Southern India. The Brahmin shook his robes as though to avoid pollution and turned away in scornful silence. To a mere visitor interested in the study of Indian habits and customs the incident was just material for an interesting entry in a traveller's note-book on the subject of caste. A European resident in the country could scarcely have been blamed for resenting the insult. No race enjoys an exclusive monopoly of good manners or bad. The Japanese are capable of offering most calculated insults to Europeans behind a veil of polished civility. But gratuitous insults addressed by some Asiatics to some Europeans will never justify gratuitous insult by other Europeans of other Asiatics. The two instances quoted above could be multiplied indefinitely by any one with long experience of Anglo-Indian relations. If the true history of every Indian anarchist could be

the same time, the fact that the same individual may be found in different parts of the world, and that the same part of the world may be found in different individuals, is a fact which is not easily explained by the theory of evolution.

The theory of evolution, as it is now generally understood, is based on the assumption that the individuals of a species are not all alike, but that they are all more or less different from each other. This is the theory of variation, and it is the basis of the theory of evolution. The theory of evolution is based on the assumption that the individuals of a species are not all alike, but that they are all more or less different from each other.

written, I venture to say that hardly one would be found in which the first bent to political crime has not been given by some disgraceful incident of the kind. I must add with emphasis that such conduct is not typical of the Englishman in India. In the same breath I must say that anarchy is not typical of Indians. There are hundreds of Indian anarchists, and I fear that the class of Englishmen who not merely offer, but consider it their duty to offer these insults to Indians, whenever the occasion arises, must also be numbered in hundreds. To the peace of India and the British connexion they constitute an incomparably greater danger than anarchists. And in offering this opinion I am not echoing the views of people like Mrs. Besant, Mr. Andrews, or Mr. Ramsay Macdonald. I am saying what was said to me insistently by experienced senior officers who honestly regarded my own political views as dangerous.

§ 54. The papers in this volume were written almost entirely with reference to constitutional questions. It was not my business to deal with the social problem in those discussions. But in gathering these papers for publication, I must guard against giving the impression that I think, or have ever thought, that the Indian question can be solved merely or primarily by granting a liberal constitution. I am perfectly sure that it cannot be solved without wise constitutional change, but I am equally sure that no political reform has the least chance of succeeding unless government deals decisively with the small class of Europeans who are all unconsciously undermining the only foundations upon which it can rest.

§ 55. England has in this matter a difficult heritage. The freedom implicit in her law, system and traditions has extended her empire over more than a quarter of the world. For several generations it has placed Englishmen as rulers over populations which are not European, and number at least one-fifth of the human race. In spite of our law, system and traditions, this dominant position has dangerously reacted on our own manners. The war has now brought

The first of these is the fact that the majority of the population of the United States is now living in urban areas. This is a result of the process of urbanization, which has been going on since the beginning of the nineteenth century. The second is the fact that the majority of the population is now living in the middle class. This is a result of the process of social mobility, which has been going on since the beginning of the nineteenth century. The third is the fact that the majority of the population is now living in the industrialized areas. This is a result of the process of industrialization, which has been going on since the beginning of the nineteenth century. The fourth is the fact that the majority of the population is now living in the developed areas. This is a result of the process of development, which has been going on since the beginning of the nineteenth century. The fifth is the fact that the majority of the population is now living in the modern areas. This is a result of the process of modernization, which has been going on since the beginning of the nineteenth century. The sixth is the fact that the majority of the population is now living in the advanced areas. This is a result of the process of advancement, which has been going on since the beginning of the nineteenth century. The seventh is the fact that the majority of the population is now living in the sophisticated areas. This is a result of the process of sophistication, which has been going on since the beginning of the nineteenth century. The eighth is the fact that the majority of the population is now living in the cultured areas. This is a result of the process of culture, which has been going on since the beginning of the nineteenth century. The ninth is the fact that the majority of the population is now living in the refined areas. This is a result of the process of refinement, which has been going on since the beginning of the nineteenth century. The tenth is the fact that the majority of the population is now living in the polished areas. This is a result of the process of polishing, which has been going on since the beginning of the nineteenth century.

§ 55. England has in this matter a difficult heritage. The freedom implicit in her law, system and traditions has extended her empire over more than a quarter of the world. For several generations it has placed Englishmen as rulers over populations which are not European, and number at least one-fifth of the human race. In spite of our law, system and traditions, this dominant position has dangerously reacted on our own manners. The war has now brought

Indians into more intimate contact with the French, Italians and other foreign peoples, who have not shared our large experience in governing non-European races, and who have not always shown conspicuous success where they have tried it. But their contact with non-European races has not produced in them the same degree of caste feeling which our relatively greater contact has produced in us. One striking illustration of all this is that while Egypt is crying to be rid of us Palestine is begging us to remain. It is not in the nature of things that people who have governed so many races should be loved by their subjects. But the much more serious fact is that our dominant position has made us unlovable. And the first step towards mending our ways is frankly to see that they want mending.

§ 56. We are fond of lecturing Indians on the evils of caste, while all unconsciously our own people have assumed the place of another caste in her system. Volumes have been written on the occupational and religious origins of caste. But really there is no mystery in the matter. Caste is a Portuguese word which connotes race. Its Indian equivalent *varna* means colour. Its motive is a sense of colour. Some Brahmins are as light as some Europeans, while Sudras and sweepers are often as black as African negroes. Between these extremes is every gradation of colour, and as any one can see from the earlier stories of Kipling, the European has simply taken his appropriate place in the whole system of mutual exclusion. In this as in many other respects the East has had greater effect on us than we on the East. And the more we realize this the better.

§ 57. The whole effect of the war has been to bring movements long gathering to a sudden head. With negligible exceptions, the non-European citizens of the British Commonwealth, who form the vast majority of its members, strenuously upheld its cause against Germany. The issue was too plain to mistake. And contrary to all that dolorous prophets foretold, they knew that in the last analysis the British Commonwealth stood for freedom and the German Empire for bondage. But companionship in arms has fanned their

the book is a collection of essays, each of which is a review of a book. The essays are written by a variety of authors, including some of the most prominent figures in the field of international law. The book is organized into three parts. The first part, 'Introduction', contains a general introduction to the book and a list of the authors. The second part, 'The Law of the Sea', contains a series of essays on the law of the sea, including a review of the United Nations Convention on the Law of the Sea. The third part, 'The Law of the Air', contains a series of essays on the law of the air, including a review of the Chicago Convention on International Civil Aviation. The book is a valuable resource for anyone interested in international law, and it is a must-read for anyone who is studying or working in the field.

long smouldering resentment against the presumption that Europeans are destined to dominate the rest of the world. In every part of Asia and Africa it is bursting into flames, and Americans know to their cost that it has also to be reckoned with in their coloured population. This is the cause of bloody riots in American cities. This is why Christianity, supported by powerful missions, makes such little progress in Central Africa as compared with Islam. Despite the fact that both religions are Semitic in origin, and spring from almost the same country, the religion founded by Mahomet is regarded as a coloured man's faith, while that founded by Christ is identified with Europe. Every missionary knows that this feeling is the most difficult factor he has to face. It has made possible the extraordinary spectacle of great numbers of Hindus supporting Moslems in the Caliphate agitation.

§ 58. Personally I regard this challenge to the long unquestioned claim of the white man to dominate the world as inevitable and wholesome, especially to ourselves. We have formally disowned that claim, and it is of the happiest augury for the future that we have used the hour of victory to take measures which prove our sincerity. But those measures will still be wrecked unless drastic steps are taken to amend the manners and practices bred by the long unquestioned doctrine of ascendancy. Lord Morley's remark is a figure of rhetoric only in the sense that the conduct to which he referred has yet to find its appropriate place in the criminal code. Lord Morley was also at pains to prove that things which journalists might say without let or hindrance in England must in India be treated and dealt with as crimes. But if so, exactly the same principle ought to be applied to conduct on the part of Europeans which is more than anything else the root cause of Indian unrest. I am strongly of opinion that governors should be vested with powers to investigate judicially cases where Europeans are alleged to have outraged Indian feeling. Wherever a case of wanton and unprovoked insult, such as those I have cited, is proved,

I am strongly of opinion that governors should be vested with powers to investigate judicially cases where Europeans are alleged to have outraged Indian feeling. Wherever a case of wanton and unprovoked insult, such as those I have cited, is proved,

government should have power to order the culprit to leave the country. The great body of European opinion in India, would, I believe, heartily support the removal of persons so convicted; and a few deportations would soon effect a definite change for the better.

§ 59. The principle is no new one in Indian administration. When Napoleon had closed Europe to British traders their demand for free admission to India was imperative. The British East India Company fought hard for its exclusive privileges when its charter came up for revision in 1813, relying mainly on the argument that a general access of traders to the country would have a disruptive effect on its ancient society, and lead to grave political dangers. That this argument contained a serious element of truth was proved by the character of those who appeared to support it. The aged Warren Hastings was called from his retirement to give evidence before the House of Commons, as well as Lord Teignmouth (Sir John Shore), Malcolm, and Munro. They all attested the practical difficulty of securing from Europeans proper treatment of the Indians and due respect for their habits and customs. To secure the enforcement in the courts of justice between Indians and Europeans was well-nigh impossible. The occasion was rendered notable by members rising in a body as Hastings entered the House, and standing bareheaded until he had taken his seat at the bar, a just though tardy admission of the wrongs he had suffered at the hands of their predecessors. In the debate which followed Charles Grant reminded the House of the injustice and oppression inflicted on natives in America and Africa by European adventurers exempt from all civilized control.

Parliament recognizing the reality of those dangers, ordered that Europeans might visit India and trade there subject only to licences granted by the Court of Directors, or, on their refusal, by the Board of Control. In India they were to reside subject to good behaviour and also with such restrictions as might from time to time be deemed necessary.

Parliament recognizing the reality of those dangers, ordered that Europeans might visit India and trade there subject only to licences granted by the Court of Directors, or, on their refusal, by the Board of Control. In India they were to reside subject to good behaviour and also with such restrictions as might from time to time be deemed necessary.

§ 60. It is much to be regretted that these powers were gradually abolished, and were not revived when the Imperial Government assumed exclusive control. But if we really mean our justice to be even-handed in India they ought to be revived in substance now. To deport Europeans whose conduct is a danger to the peace of India to the country of their origin, is a far milder measure than to exile Indians for a like reason. I greatly regret that I could not say so to Lord Selborne's Committee: the character of their reference excluded the subject: but I cannot take the pen from this paper without saying it here.¹

§ 61. My Indian friends know that all I said to Lord Selborne's Committee, I had said to them in India years before. Not one of you has reproached me for arguing in public that every government, whatever it is, should have powers adequate for enforcing the law. For that reason, if for no other, my hopes for India are brighter than ever, in the face of all the dangers which are now gathering in the path of reform. And as some of the predictions I made to you then have been verified since, I will venture, in taking leave of this subject, on one more. My belief is that progress towards responsible government will be most rapid in that province where ministers and legislators openly exercise their influence to support the enforcement of law. Nothing but disorder can now delay the process and nothing can stop it but civil war, which always has its seeds in disorder. The enforcement of law is essential to government, and responsible government cannot develop in a country where government itself is ceasing to exist. This was the truth which a Liberal government forgot in ignoring measures taken in Ulster to resist the law.

Unless the law is enforced civil war will sooner or later result, and control pass from civil to military hands. The moment blood begins to flow passion is inflamed, and incidents such as those which disfigured the suppression of

¹ Since writing these paragraphs, I have heard, on unimpeachable authority, that a European guilty of improper behaviour to an Egyptian was ordered by Lord Cromer to quit Egypt within forty-eight hours.

The first step in the process is to identify the problem. This involves gathering information about the situation and the people involved. Once the problem is identified, the next step is to analyze it. This involves breaking the problem down into its components and understanding how they are related. The third step is to develop a plan. This involves deciding on the best way to solve the problem and the steps that need to be taken. The fourth step is to implement the plan. This involves putting the plan into action and making any necessary adjustments. The final step is to evaluate the results. This involves checking to see if the problem has been solved and if the solution was effective.

Abstract

the Indian mutiny, the rebellion in Dublin, or the outbreak in the Punjab, are an almost invariable result. The Mutiny was responsible for decades of reaction in India. The first necessity is, of course, to see that the laws are as just as may be. The second is to see that the enforcement of those laws is never in question from the outset. To deal with criminals who defy the laws which protect society against themselves is easy enough. The real difficulty is presented by men who blindly but honestly believe that law is contrary to freedom. With all the idealism, devotion, and intelligence which criminals lack, they can always devise means to put any government in the wrong. All human laws are imperfect, and the conscientious resister will always pick out the less perfect laws to defy. He courts martyrdom to enlist sympathy, and if public sympathy is successfully marshalled against government, its task becomes one of extreme difficulty. When Mr. Lloyd George remembers how he breathed on the smoking flax of passive resistance, he must often wish that his lips had been sealed. I ask you to think of the time, already in sight, when the task of maintaining order, with all its bitter necessities, will rest on yourselves.

The direct responsibility for maintaining order still lies with the governments responsible to Parliament, and must continue to lie there until the final transfer of responsible government can be made. It is for ministers and legislatures to advise the governor-in-council on all measures taken to that end. But the advice you give to your own constituents is of even greater importance. You have always to remember that advice given publicly in the legislatures to the governor-in-council is also advice given to your own supporters. Your influence as popular leaders if exercised in the cause of law and order will be final and conclusive and conduce more than any one factor to the perfect tranquillity in which India can move most rapidly to the status of a self-governing dominion. I am thinking always of the time when Parliament will send commissions to India to report progress. The principal point to which

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It highlights the journal's role in providing
 a platform for the dissemination of research findings and
 the advancement of the discipline. The second part of the
 paper focuses on the journal's commitment to diversity and
 inclusion, emphasizing the need for a more equitable and
 inclusive research agenda. The third part of the paper
 discusses the journal's efforts to promote the use of
 research in management education, highlighting the
 importance of evidence-based practice. The fourth part of
 the paper discusses the journal's commitment to
 transparency and accountability, emphasizing the need for
 open access and the sharing of research data. The fifth
 part of the paper discusses the journal's commitment to
 the development of the field of management education,
 highlighting the need for ongoing research and
 innovation. The final part of the paper discusses the
 journal's commitment to the advancement of the
 discipline, highlighting the need for a more
 comprehensive and integrated approach to management
 education.

The first step in the process is to identify the problem. This involves gathering information about the situation and understanding the needs of the stakeholders involved. Once the problem is identified, the next step is to develop a plan of action. This plan should outline the goals of the project, the tasks that need to be completed, and the resources that will be required.

After the plan is developed, the next step is to implement the plan. This involves assigning tasks to team members, setting deadlines, and monitoring progress. It is important to communicate regularly with team members to ensure that everyone is on track and to address any issues that arise.

Finally, the last step in the process is to evaluate the results of the project. This involves comparing the actual results to the goals that were set at the beginning of the project. If the goals were not met, it is important to identify the reasons why and make adjustments to the plan for future projects.

the Indian mutiny, the rebellion in Dublin, or the outbreak in the Punjab, are an almost invariable result. The Mutiny was responsible for decades of reaction in India. The first necessity is, of course, to see that the laws are as just as may be. The second is to see that the enforcement of those laws is never in question from the outset. To deal with criminals who defy the laws which protect society against themselves is easy enough. The real difficulty is presented by men who blindly but honestly believe that law is contrary to freedom. With all the idealism, devotion, and intelligence which criminals lack, they can always devise means to put any government in the wrong. All human laws are imperfect, and the conscientious resister will always pick out the less perfect laws to defy. He courts martyrdom to enlist sympathy, and if public sympathy is successfully marshalled against government, its task becomes one of extreme difficulty. When Mr. Lloyd George remembers how he breathed on the smoking flax of passive resistance, he must often wish that his lips had been sealed. I ask you to think of the time, already in sight, when the task of maintaining order, with all its bitter necessities, will rest on yourselves.

The direct responsibility for maintaining order still lies with the governments responsible to Parliament, and must continue to lie there until the final transfer of responsible government can be made. It is for ministers and legislatures to advise the governor-in-council on all measures taken to that end. But the advice you give to your own constituents is of even greater importance. You have always to remember that advice given publicly in the legislatures to the governor-in-council is also advice given to your own supporters. Your influence as popular leaders if exercised in the cause of law and order will be final and conclusive and conduce more than any one factor to the perfect tranquillity in which India can move most rapidly to the status of a self-governing dominion. I am thinking always of the time when Parliament will send commissions to India to report progress. The principal point to which

they will look is how far Indian electorates can be trusted to maintain order through their own representatives. In any crisis first ask yourselves what material you are going to provide the commissions for framing an answer to that question.

§ 62. In democracies the ultimate decision between right and wrong rests with the masses. And the hope of the world lies in this that the habit of deciding fits them for decision. If any one doubts this let him read the luminous article on Italy in *The Times Literary Supplement* which appears just as these pages are going to the press. A single quotation will here suffice.

In other ways, too, the *risorgimento* has been justified in the eyes of men by recent events. A few years ago people qualified their approval of the work of Cavour by lamenting the 'disillusionment' of subsequent Italian history. And that there was much 'disillusionment' the Italians themselves were the first to confess. But slow beneficent change is often going on underground during periods of apparent and proclaimed 'disillusionment'. To any one who knows what Italy was really like in the period which we justly call her heroic age, from 1848 to 1870, her recent progress is clear enough. The southern and much of the central populations were sunk in barbarism, the evil inheritance of centuries of servitude; everywhere corruption, inefficiency, and lethargy were a deadweight which the patriots had to lift, being men translated above themselves by the inspiration of their cause. Great has been the progress silently effected by fifty years of the new régime, with all its faults and failures. To those who know the histories of Italy from 1915 to 1918 in mobilizing and maintaining five million men, and fighting a modern war in all its equipage along three hundred miles of Alpine front, will itself be a proof of the steady average advance made during the dim half-century that followed Italy's great illumination.¹

§ 63. Yet this article shows that Italy could not have done what she did, nor yet be what she now is, but for the leadership in the crisis of her fate of Mazzini, Garibaldi,

To any one who knows what Italy was really like in the period which we justly call her heroic age, from 1848 to 1870, her recent progress is clear enough. The southern and much of the central populations were sunk in barbarism, the evil inheritance of centuries of servitude; everywhere corruption, inefficiency, and lethargy were a deadweight which the patriots had to lift, being men translated above themselves by the inspiration of their cause. Great has been the progress silently effected by fifty years of the new régime, with all its faults and failures. To those who know the histories of the campaigns of 1848 and 1860 the performance of Italy from 1915 to 1918 in mobilizing and maintaining five million men, and fighting a modern war in all its equipage along three hundred miles of Alpine front, will itself be a proof of the steady average advance made during the dim half-century that followed Italy's great illumination.¹

§ 63. Yet this article shows that Italy could not have done what she did, nor yet be what she now is, but for the leadership in the crisis of her fate of Mazzini, Garibaldi,

¹ *The Times Literary Supplement*, September 16, 1920. 'Venti Settembre, 1870-1920.'

the first of these is the fact that the majority of the specimens are of the same sex, and the second is the fact that the majority of the specimens are of the same age. The third fact is that the majority of the specimens are of the same species, and the fourth is that the majority of the specimens are of the same sex and age.

Cavour, and some hundreds of associates who were 'men translated above themselves by the inspiration of their cause'. Popular government succeeds only in so far as electorates can be brought to subordinate passion to reason. Where the burden of decision rests on the many the responsibilities cast on the few are immeasurably increased. For the many cannot decide between right and wrong unless the right is clearly presented to their judgement as well as the wrong. Electorates are seldom wanting in counsellors to tell them that the dictates of their passions are the voice of God. To tell people what they want to hear is an easy task. The difficulty lies in getting a hearing for the still small voice of reason; but no genuine choice begins to be exercised until there are men like Gokhale with the courage to make it heard. The only true servants of popular government are those bold enough to voice opinions which are for the moment unpopular. Appeals to reason calmly and persistently made prevail in the end. If both sides are heard, the people do in the long run learn to distinguish their friends from their creatures. In popular institutions the influence of a brave, upright, and outspoken few is decisive. As Abraham knew, when he talked with God, a nation may be saved by no more than ten of them. There are more than ten, to my knowledge, in India, who may live in their countrymen's memory for ever if they will but face their reproaches to-day.

§ 64. The working of popular government depends upon certain qualities and habits of mind in the people at large which paternal government does little to foster. The difficulty of creating such habits where no free institutions exist or of founding such institutions where no such habits have been formed is inherent in the problem; and those who have given their best thought to it will be most chary of assuming that the principle embodied in the recent Act supplies the ultimate solution. The best that we can say of it is that a series of inquiries covering years brought to sight no other principle the greater difficulty of which had not already been proved. To test dyarchy in the crucible

the first of these is the fact that the majority of the specimens are from the same locality, and the second is the fact that the majority of the specimens are from the same individual.

of experience was the only course which remained to be taken. But should trial prove that it offers no key to the problem, we may still be sure that the fresh experience gained will suggest expedients which were not revealed in the light of that which we now have. The resources of mere speculation have limits; but those of experiment have none. The experience which finally disposes of one theory suggests another upon which a fresh experiment can be based.

§ 65. 'A few days ago', writes Dean Inge, 'I visited a mother who lost her only son in the war. She said, "What breaks my heart is that my boy, and many others like him, gave their lives for a nation which is quite unworthy of the sacrifice".'¹ What message of comfort the Dean had for this breaking heart we are not told. As the writer on Italy, above quoted, reminds us, 'beneficent change is often going on underground during periods of apparent and proclaimed "disillusionment".' Such a period is apparent and proclaimed to-day. On the morrow of the war we are met by the old long-standing problems and disputes arising from defects either in human nature or else in the social organization: and the cry goes up that the war was morally lost, and that all its immeasurable suffering was in vain; as though mere anguish could redeem society. Pain of itself is no solvent of human problems. It may, when all else has failed, force us to recognize their existence and goad us to action. But solutions are born only of strenuous thought and protracted labour. To insist that the war has done nothing to open our eyes or stimulate our energies is sheer blindness. It compelled England, as nothing else could have done, to recognize that the principles for which she was fighting could not be restricted to the peoples of Europe, America, and Australasia, but must be extended to those of Asia and Africa. It confronted her with the greatest and most difficult problem that has ever been faced in the history of human freedom. I do not say she was quick to grasp it, for English minds work slowly. The long hesitation which preceded the pronouncement of August 1917

was largely responsible for the impetus given to extremist views, some fruits of which were seen in the Punjab rising. The same pronouncement made in 1916 would have forestalled a harvest of trouble. But history will find little cause for reproaching England for the manner in which she handled the question from the moment her policy was settled and announced. The problem was then squarely faced. The facts were submitted to searching inquiry. No thought or pains necessary to forecast the appropriate solution were spared. On the other hand the mistake was not committed of endeavouring to settle by interminable argument what only experience can decide. When all the resources of inquiry and speculation were exhausted the plan was submitted to the test of trial, and machinery was created in advance for registering the results and for giving effect to them in years to come. Throughout the case was dealt with on its merits. It never became a party issue, and the standing danger that India might become a field for the manoeuvres of English factions was carefully avoided. What England had promised in the hour of her trial was more than redeemed in the fullness of victory. And for all this the chief credit must remain with the man in whose hands the final direction lay. Mr. Montagu has been and will always be exposed to criticisms, of which many will be found in these pages. But if England ever has cause to be proud of this episode she will recognize that its successful issue was mainly due to his crowning quality of persistence. He merits the gratitude of England no less than of India.

§ 66. That England has granted responsible government to India in strictness should never be said and will never be true. The best she could do was to put India in the way of taking responsible government for herself. That she has done, and the rest remains for Indians to do. And whatever they accomplish will not be accomplished for India alone. National achievements are not to be measured by the things which a nation achieves for itself. It is much that England should have found a way to her own freedom; but infinitely more that she has traced the path which

the same time, the government has been able to maintain a high level of public expenditure, and to do so without resorting to excessive borrowing. This is a remarkable achievement, and it is one that has enabled the government to maintain a high level of public expenditure, and to do so without resorting to excessive borrowing. This is a remarkable achievement, and it is one that has enabled the government to maintain a high level of public expenditure, and to do so without resorting to excessive borrowing.

'THE DUKE MEMORANDUM'

SUGGESTIONS FOR CONSTITUTIONAL PROGRESS IN INDIAN POLITY

(AN EXPERIMENT IN THE APPLICATION OF THE PRINCIPLE OF
DYARCHY TO THE GOVERNMENT OF BENGAL)

INTRODUCTORY NOTE

IN the summer of 1915 those members of the Round Table groups who were engaged in the preparation of Volume II of *The Commonwealth of Nations* began to write the chapters relating to India and the Dependencies. It was not intended to discuss in these chapters the detailed problems of Indian administration, but only to deal with the political status of India within the Empire and its relations to an Imperial Parliament and Cabinet, reconstructed on lines set forth in *The Problem of the Commonwealth*. At an early stage it was recognized that Indians could not be given responsibility for Imperial policy until they had first reached the point where they had some responsible share in their own Government. For so long as the final control of Indian administration lay with the Imperial Parliament it seemed out of the question that the nominees of the Government of India, or the representatives of an Indian assembly to which constitutional responsibility was denied, should be able by their votes to make and unmake the Cabinet which controlled Imperial policy, including that of the Government of India itself. At first it was thought possible to leave the question of India's status in the Empire to be settled by the reconstructed Imperial Parliament itself. Representations, however, from India, and still more the resolution introduced into the Viceroy's Council, asking that India should be represented in the next Imperial Conference, and the friendly reply of the Imperial Government thereto, indicated that this was not a practical course, and that opinion in India had reached a point at which an alteration in the constitutional relations between the self-governing portions of the Empire would necessitate a corresponding definition of the position which India was to occupy within it.

It soon became clear, however, that the first step towards solving

'THE DUKE MEMORANDUM'

SUGGESTIONS FOR CONSTITUTIONAL PROGRESS IN INDIAN POLITY

(AN EXPERIMENT IN THE APPLICATION OF THE PRINCIPLE OF
DYARCHY TO THE GOVERNMENT OF BENGAL)

INTRODUCTORY NOTE

IN the summer of 1915 those members of the Round Table groups who were engaged in the preparation of Volume II of *The Commonwealth of Nations* began to write the chapters relating to India and the Dependencies. It was not intended to discuss in these chapters the detailed problems of Indian administration, but only to deal with the political status of India within the Empire and its relations to an Imperial Parliament and Cabinet, reconstructed on lines set forth in *The Problem of the Commonwealth*. At an early stage it was recognized that Indians could not be given responsibility for Imperial policy until they had first reached the point where they had some responsible share in their own Government. For so long as the final control of Indian administration lay with the Imperial Parliament it seemed out of the question that the nominees of the Government of India, or the representatives of an Indian assembly to which constitutional responsibility was denied, should be able by their votes to make and unmake the Cabinet which controlled Imperial policy, including that of the Government of India itself. At first it was thought possible to leave the question of India's status in the Empire to be settled by the reconstructed Imperial Parliament itself. Representations, however, from India, and still more the resolution introduced into the Viceroy's Council, asking that India should be represented in the next Imperial Conference, and the friendly reply of the Imperial Government thereto, indicated that this was not a practical course, and that opinion in India had reached a point at which an alteration in the constitutional relations between the self-governing portions of the Empire would necessitate a corresponding definition of the position which India was to occupy within it.

It soon became clear, however, that the first step towards solving

the problem of the representation of India in London must be to come to some conclusion on the question whether (and, if so, to what extent and in what form) the beginning of responsible Government will be practicable in India itself in the near future. For while no method of representing Indian interests either in the Imperial Conference or in a reconstructed Imperial Parliament which was now practicable could be expected to satisfy Indian aspirations; nevertheless, if some stages in India's progress towards a degree of real autonomy could be satisfactorily mapped out, either at the time when the reconstruction of the Imperial constitution was being taken in hand or earlier, the question of her constitutional status within the Empire would not be so difficult to deal with. Hence an inquiry was set on foot to examine how self-government could be introduced and gradually and peaceably extended in India. The basis of the inquiry was that the essence of the problem is to find a method of introducing true responsible government, in a limited and manageable sphere of administration, which could be contracted or extended in accordance with the practical results attained without imperilling the structure of Government itself.

This memorandum is an attempt to work out the practical application of this principle.

May 1, 1916,

the problem of the representation of India in London must be to come to some conclusion on the question whether (and, if so, to what extent and in what form) the beginning of responsible Government will be practicable in India itself in the near future. For while no method of representing Indian interests either in the Imperial Conference or in a reconstructed Imperial Parliament which was now practicable could be expected to satisfy Indian aspirations; nevertheless, if some stages in India's progress towards a degree of real autonomy could be satisfactorily mapped out, either at the time when the reconstruction of the Imperial constitution was being taken in hand or earlier, the question of her constitutional status within the Empire would not be so difficult to deal with. Hence an inquiry was set on foot to examine how self-government could be introduced and gradually and peaceably extended in India. The basis of the inquiry was that the essence of the problem is to find a method of introducing true responsible government, in a limited and manageable sphere of administration, which could be contracted or extended in accordance with the practical results attained without imperilling the structure of Government itself.

This memorandum is an attempt to work out the practical application of this principle.

May 1, 1916,

CHAPTER I
THE EXISTING SYSTEM DESCRIBED

§ 1. SUBJECT to the statutory control, in certain matters exercised by the Secretary of State in Council¹ and also to the more general control exercised by Parliament, the administration of India is in the hands of the Government of India and of Provincial Governments subordinate to it. The Government of India consists of the Viceroy and Governor-General with seven members of Council, who are ordinarily English permanent officials, except one Indian, who may or may not be an official. Unofficial Englishmen are from time to time appointed to the Law, and, more rarely, to the Finance Portfolio.

The Government of India administers directly : Foreign Affairs ; Defence, including the Army and Volunteers and Marine ; Currency ; Railways ; Posts and Telegraphs ; Sea Customs and political relations with the principal native States. It also deals at times with large and exceptional questions relating to matters ordinarily under the administration of Provincial Governments.

The work of legislation is performed by the Legislative Council, which consists of the Viceroy and his Executive Council with sixty additional Members, official and non-official. The Secretary of State exercises control over legislation by a power of veto on Bills passed by the Indian legislatures and also by instructions to the Government of India on the drafts of Bills which are submitted to him before introduction. The powers of the Imperial Legislative Council, and the rights of members are the same as in the case of Provincial Legislative Councils which will be described shortly. The Legislature has a narrow official majority. Of the non-officials some are nominated, a majority elected, in some cases directly by constituencies of landholders and Mohammedans with high property qualifications, in others by delegates elected by wider constituencies as the non-official members of the provincial councils.

¹ For an explanation of the various councils connected with Indian Government see appendix at end of this chapter.

CHAPTER I

THE EXISTING SYSTEM DESCRIBED

§ 1. SUBJECT to the statutory control, in certain matters exercised by the Secretary of State in Council¹ and also to the more general control exercised by Parliament, the administration of India is in the hands of the Government of India and of Provincial Governments subordinate to it. The Government of India consists of the Viceroy and Governor-General with seven members of Council, who are ordinarily English permanent officials, except one Indian, who may or may not be an official. Unofficial Englishmen are from time to time appointed to the Law, and, more rarely, to the Finance Portfolio.

The Government of India administers directly : Foreign Affairs ; Defence, including the Army and Volunteers and Marine ; Currency ; Railways ; Posts and Telegraphs ; Sea Customs and political relations with the principal native States. It also deals at times with large and exceptional questions relating to matters ordinarily under the administration of Provincial Governments.

The work of legislation is performed by the Legislative Council, which consists of the Viceroy and his Executive Council with sixty additional Members, official and non-official. The Secretary of State exercises control over legislation by a power of veto on Bills passed by the Indian legislatures and also by instructions to the Government of India on the drafts of Bills which are submitted to him before introduction. The powers of the Imperial Legislative Council, and the rights of members are the same as in the case of Provincial Legislative Councils which will be described shortly. The Legislature has a narrow official majority. Of the non-officials some are nominated, a majority elected, in some cases directly by constituencies of landholders and Mohammedans with high property qualifications, in others by delegates elected by wider constituencies as the non-official members of the provincial councils.

¹ For an explanation of the various councils connected with Indian Government see appendix at end of this chapter.

§ 2. Of these the principal are : three Presidencies with Governors in Council, one province with a Lieutenant-Governor in Council, three with Lieutenant-Governors, two with Chief Commissioners. All the above-mentioned Local Governments have Legislative Councils whose activities are subject to a double control, both by the Viceroy in Council and by the Secretary of State, exactly the same in character as that exercised by the latter over the legislative powers of the Government of India. Most functions of internal government, such as Justice, Police, Education, Sanitation, Public Works, Irrigation, Forests, Local and Municipal Self-Government are administered by the Local Governments, over whom the Government of India exercises a co-ordinating and controlling authority.

The Government of India administers directly a revenue of about fifty millions sterling, against thirty millions which have been placed at the disposal of Local Governments ; but of its fifty millions two-thirds to three-fourths are expended on the interest of the Public Debt and in Defence. It is therefore apparent that the Local Governments are concerned to a much greater degree with the functions which touch the daily life of the people ; accordingly a larger popular element has already been introduced into the Local Governments, and it is assumed in what follows that it is in the Local Governments that further steps in the direction of popular government should first be taken.

§ 3. A brief abstract will now be given of the polity of a Local Government, Bengal being selected as typical in most respects of the more advanced provinces.

The Executive consists of a Governor with a Council of three members, two permanent officials, and one Indian, at present a non-official. All are appointed for five years.

The Executive Council divide the departments into portfolios and administer through the Secretaries, of whom there are four civil Secretaries, two Public Works Secretaries, and a Secretary in the Legislative Department, who is also Secretary to the Legislative Council. The Public Works Secretaries divide between them Irrigation, Embankments, Roads and Buildings, such Light Railways as are under the Local Government and Archaeology. They also act as transmitting authorities for the Government of India in certain matters connected with Marine and Railways which are under its direct control.

The remaining affairs of the Local Government are dis-

[illegible]

100

... ..

§ 2. Of these the principal are : three Presidencies with Governors in Council, one province with a Lieutenant-Governor in Council, three with Lieutenant-Governors, two with Chief Commissioners. All the above-mentioned Local Governments have Legislative Councils whose activities are subject to a double control, both by the Viceroy in Council and by the Secretary of State, exactly the same in character as that exercised by the latter over the legislative powers of the Government of India. Most functions of internal government, such as Justice, Police, Education, Sanitation, Public Works, Irrigation, Forests, Local and Municipal Self-Government are administered by the Local Governments, over whom the Government of India exercises a co-ordinating and controlling authority.

The Government of India administers directly a revenue of about fifty millions sterling, against thirty millions which have been placed at the disposal of Local Governments ; but of its fifty millions two-thirds to three-fourths are expended on the interest of the Public Debt and in Defence. It is therefore apparent that the Local Governments are concerned to a much greater degree with the functions which touch the daily life of the people ; accordingly a larger popular element has already been introduced into the Local Governments, and it is assumed in what follows that it is in the Local Governments that further steps in the direction of popular government should first be taken.

§ 3. A brief abstract will now be given of the polity of a Local Government, Bengal being selected as typical in most respects of the more advanced provinces.

The Executive consists of a Governor with a Council of three members, two permanent officials, and one Indian, at present a non-official. All are appointed for five years.

The Executive Council divide the departments into portfolios and administer through the Secretaries, of whom there are four civil Secretaries, two Public Works Secretaries, and a Secretary in the Legislative Department, who is also Secretary to the Legislative Council. The Public Works Secretaries divide between them Irrigation, Embankments, Roads and Buildings, such Light Railways as are under the Local Government and Archaeology. They also act as transmitting authorities for the Government of India in certain matters connected with Marine and Railways which are under its direct control.

The remaining affairs of the Local Government are dis-

tributed under the four civil Secretaries as follows, only the more important branches being mentioned :

<i>Chief Secretary.</i>	<i>Secretary for Finance and Commerce.</i>	<i>Revenue Secretary.</i>	<i>General Secretary.</i>
Judicial.	Finance (with the	Land Revenue.	Ecclesiastical.
Political.	Budget).	Land Acquisition	Education.
Appointment (i. e.	Excise.	(for Public pur-	Municipal and
the posting of the	Factories.	poses).	Local Self-
Indian and the	Emigration.	Jurisdiction and	Government.
recruitment and	The Medical Ser-	Boundaries.	Sanitation.
posting of the	vice.	Agriculture.

Service).	Salt	Credit.	
		Forests.	
Police.	Stamps.	Registration (of	
Jails.	Registration of	deeds and assur-	
	Public Compan-	ances).	
	ies and most		
	other subjects in		
	which the Com-		
	mmercial Public		
	have to be dealt		
	with directly.		

The Secretaries correspond with five Commissioners of Division, who are administrative officers for almost all departments. Each division contains five or six districts in charge of Magistrate Collectors, or Deputy Commissioners, also known as District Officers.

Correspondence on most subjects has to pass from the District Officer to Government through the Commissioner, but Civil Justice is entirely under the High Court, who manage it through District Judges and their subordinate judicial officers.

Also specialized departments, particularly those with expert or professional heads, are in varying degrees independent of the District Officer and Commissioner. Generally speaking, as regards internal organization and discipline, they are self-contained ; but in matters of policy and their relations to the public the District Officer has some degree of authority. Such departments are Police, Education, Jails, Public Works, Registration of Deeds and Assurances, Forests.

The department of Local Self-Government, which is concerned with municipal towns and with rural boards, comprising District Boards, Local Boards and Village Unions, differs from other departments in its internal economy and its relations to the Government, because of the extent to which the self-governing and elective principles

tributed under the four civil Secretaries as follows, only the more important branches being mentioned :

<i>Chief Secretary.</i>	<i>Secretary for Finance and Commerce.</i>	<i>Revenue Secretary.</i>	<i>General Secretary.</i>
Judicial.	Finance (with the	Land Revenue.	Ecclesiastical.
Political.	Budget).	Land Acquisition	Education.
Appointment (i. e.	Excise.	(for Public pur-	Municipal and
the posting of the	Factories.	poses).	Local Self-
Indian and the	Emigration.	Jurisdiction and	Government.
recruitment and	The Medical Ser-	Boundaries.	Sanitation.
posting of the	vice.	Agriculture.	
Provincial Civil	Opium	Co-operative	
Service).	Salt	Credit.	
		Forests.	
Police.	Stamps.	Registration (of	
Jails.	Registration of	deeds and assur-	
	Public Compan-	ances).	
	ies and most		
	other subjects in		
	which the Com-		
	mmercial Public		
	have to be dealt		
	with directly.		

The Secretaries correspond with five Commissioners of Division, who are administrative officers for almost all departments. Each division contains five or six districts in charge of Magistrate Collectors, or Deputy Commissioners, also known as District Officers.

Correspondence on most subjects has to pass from the District Officer to Government through the Commissioner, but Civil Justice is entirely under the High Court, who manage it through District Judges and their subordinate judicial officers.

Also specialized departments, particularly those with expert or professional heads, are in varying degrees independent of the District Officer and Commissioner. Generally speaking, as regards internal organization and discipline, they are self-contained ; but in matters of policy and their relations to the public the District Officer has some degree of authority. Such departments are Police, Education, Jails, Public Works, Registration of Deeds and Assurances, Forests.

The department of Local Self-Government, which is concerned with municipal towns and with rural boards, comprising District Boards, Local Boards and Village Unions, differs from other departments in its internal economy and its relations to the Government, because of the extent to which the self-governing and elective principles

have already been developed in these institutions. Correspondence regarding this department is, however, carried on as in the case of other departments through the Commissioner and District Officers.

§ 4. The Bengal Legislative Council consists of the Governor and Executive Council with additional members. The term is three years, the whole body of additional members retiring at one time. These are fourteen nominated officials, six nominated non-officials, twenty-eight elected non-officials, and to them may be added for special purposes two experts, either officials or not. There is thus a large majority of non-officials, at least thirty-four out of a possible fifty-four and a clear majority of elected members, twenty-eight out of a possible fifty-four. It may be mentioned here that Bihar and Orissa is the only other province with an elected majority; in all the others, even Bombay and Madras, there is a non-official but not an elected majority. This is a matter not of statute but of statutory regulations which can be altered at any time. In Bengal eleven members are elected by the non-official element in Municipalities and District Boards, one by the whole body of the Calcutta Corporation, and one by the elected members of that Corporation, one by the Senate of the Calcutta University, four by landholders with a very high franchise, five by Mohammedans with a moderate property qualification. The remaining five are returned by commercial bodies which in existing circumstances will always return Europeans. Of the nominated members two are appointed to represent special Commercial Interests, one European and the other Indian, with the understanding that when suitable constituencies can be formed they shall become elective. The main objection taken by advanced Indian opinion to the present system relates to the indirect election by Municipalities and District Boards. It is probable that Lord Morley adopted these as constituencies because they were ready to his hand, and it would have taken time and trouble to form suitable direct constituencies. The objections to the system are fairly obvious although it also has distinct advantages in securing genuine local representation.

The Legislative Council may accept, amend or reject measures proposed by the Government, subject to veto by the Governor-General and by the Secretary of State. The power of veto does not imply power of amendment. The superior authorities can control the drafting before the Bill is introduced, but if, while passing through the stages of

the 1990s, the United States was the only country in the world to have a president who had been elected to the office by a woman. In 1992, Bill Clinton, a Democrat, was elected president, and in 1994, he was re-elected.

Clinton's presidency was marked by a number of significant events, including the end of the Cold War, the signing of the North American Free Trade Agreement (NAFTA), and the passage of the Americans with Disabilities Act (ADA).

Clinton's first term was also marked by a number of controversies, including the impeachment of a Supreme Court Justice and the impeachment of Clinton himself.

Clinton's second term was marked by the end of the Cold War, the signing of the North American Free Trade Agreement (NAFTA), and the passage of the Americans with Disabilities Act (ADA).

Clinton's presidency was also marked by a number of controversies, including the impeachment of a Supreme Court Justice and the impeachment of Clinton himself.

Clinton's second term was marked by the end of the Cold War, the signing of the North American Free Trade Agreement (NAFTA), and the passage of the Americans with Disabilities Act (ADA).

Clinton's presidency was also marked by a number of controversies, including the impeachment of a Supreme Court Justice and the impeachment of Clinton himself.

Clinton's second term was marked by the end of the Cold War, the signing of the North American Free Trade Agreement (NAFTA), and the passage of the Americans with Disabilities Act (ADA).

have already been developed in these institutions. Correspondence regarding this department is, however, carried on as in the case of other departments through the Commissioner and District Officers.

§ 4. The Bengal Legislative Council consists of the Governor and Executive Council with additional members. The term is three years, the whole body of additional members retiring at one time. These are fourteen nominated officials, six nominated non-officials, twenty-eight elected non-officials, and to them may be added for special purposes two experts, either officials or not. There is thus a large majority of non-officials, at least thirty-four out of a possible fifty-four and a clear majority of elected members, twenty-eight out of a possible fifty-four. It may be mentioned here that Bihar and Orissa is the only other province with an elected majority; in all the others, even Bombay and Madras, there is a non-official but not an elected majority. This is a matter not of statute but of statutory regulations which can be altered at any time. In Bengal eleven members are elected by the non-official element in Municipalities and District Boards, one by the whole body of the Calcutta Corporation, and one by the elected members of that Corporation, one by the Senate of the Calcutta University, four by landholders with a very high franchise, five by Mohammedans with a moderate property qualification. The remaining five are returned by commercial bodies which in existing circumstances will always return Europeans. Of the nominated members two are appointed to represent special Commercial Interests, one European and the other Indian, with the understanding that when suitable constituencies can be formed they shall become elective. The main objection taken by advanced Indian opinion to the present system relates to the indirect election by Municipalities and District Boards. It is probable that Lord Morley adopted these as constituencies because they were ready to his hand, and it would have taken time and trouble to form suitable direct constituencies. The objections to the system are fairly obvious although it also has distinct advantages in securing genuine local representation.

The Legislative Council may accept, amend or reject measures proposed by the Government, subject to veto by the Governor-General and by the Secretary of State. The power of veto does not imply power of amendment. The superior authorities can control the drafting before the Bill is introduced, but if, while passing through the stages of

legislation, it is altered to their dissatisfaction, they can only reject it *in toto*.

The Legislative Council of the Government of India has concurrent powers with the provincial legislatures, so that a measure which the latter will not pass or will only pass in a mutilated form can be taken up and passed by the Government of India. It is, of course, sometimes an open question in which legislature a particular measure can most suitably be introduced, but the option of legislating in the Imperial Legislative Council on local affairs is rarely if at all exercised as a real reserve power or method of coercion, although its mere existence is doubtless not without effect. Legislation is conducted with full publicity. Bills may be published before introduction. They are always published after introduction and before the Select Committee stage, and, if materially altered at that stage, they are published again.

The Council discuss the Provincial Budget, but the Government is not bound by their resolutions upon it. Non-official members have the right of interpellation, of proposing resolutions on matters of public importance and of introducing Bills. A Finance Committee of the Council is elected annually by the non-official members to which the Government submits all schemes for fresh expenditure which it regards as optional. The total involved is very small, perhaps 1 per cent. of the total provincial expenditure. Government may be open to the criticism that what it wants itself is classed as 'obligatory', and that 'optional' only means what it does not very much care about, but with the best will in the world it could not in existing circumstances double the small amount placed at the disposal of the Finance Committee.

The Councils have now been working for six years, they have real power over legislation and great opportunities for influence in all matters of administration; but the satisfaction at first felt at this great advance upon previous conditions is perhaps now giving way to some degree of disappointment at the absence of initiative and of financial powers.

§ 5. Similarly less than was expected has been gained from the appointment of an Indian member to the Executive Council in Bengal and other Provinces. The fact that he is in a hopeless minority as against the European elements is self-evident, while the extent to which the policy of even the most obstinate official members must be modified to meet his views in order that the Governor may not feel

the same time, the same person may be a member of several different societies, and the same society may have several different members.

The first of these is the case of the individual, who may be a member of several different societies, and the same society may have several different members.

The second of these is the case of the society, which may have several different members, and the same individual may be a member of several different societies.

The third of these is the case of the individual, who may be a member of several different societies, and the same society may have several different members.

The fourth of these is the case of the society, which may have several different members, and the same individual may be a member of several different societies.

The fifth of these is the case of the individual, who may be a member of several different societies, and the same society may have several different members.

The sixth of these is the case of the society, which may have several different members, and the same individual may be a member of several different societies.

The seventh of these is the case of the individual, who may be a member of several different societies, and the same society may have several different members.

The eighth of these is the case of the society, which may have several different members, and the same individual may be a member of several different societies.

The ninth of these is the case of the individual, who may be a member of several different societies, and the same society may have several different members.

The tenth of these is the case of the society, which may have several different members, and the same individual may be a member of several different societies.

The eleventh of these is the case of the individual, who may be a member of several different societies, and the same society may have several different members.

The twelfth of these is the case of the society, which may have several different members, and the same individual may be a member of several different societies.

The thirteenth of these is the case of the individual, who may be a member of several different societies, and the same society may have several different members.

compelled to side with him and overrule them by his casting vote is unknown and not taken into account. Also, since he is a Government nominee, ordinarily the Governor's own nominee, he has probably been chosen as a safe man, and can hardly be representative of the most advanced section of opinion on the Legislative Council.

§ 6. These are as fairly as they can be described the circumstances of an Indian Government in Council at the present moment. Clearly they are in a stage of transition; very great scope has been given for the influence of Indian opinion but a comparatively small measure of real power.

The enlargement of the Legislative Councils which has brought in a considerable number of skilful and experienced lawyers, and involved also the maintenance of a highly trained secretarial staff, has led to a marked improvement in the technical excellence of provincial legislation. It is probably now peculiarly well fortified against the sapping and mining of lawyers in the courts. But except in this respect, perhaps even in this respect, the tendency is to develop the critical at the expense of the constructive faculty. The Indian may introduce legislation if he pleases, but the responsibility for initiating measures to deal with admitted evils is not on him but on the Government. He is neither under the necessity of making them practical, as he would be if he himself had to administer them, nor has he to consider how to provide funds for their execution.

It is assumed that the aspirations of both the governors and the governed are in the direction of greater self-government, that the general policy is to grant instalments of power as rapidly as is safe. Since we are dealing mainly with internal affairs, it may be taken that safety means rather the well-being of the subject than the stability of the Supreme Government. The latter is scarcely in question, although it would be prejudiced by any serious degree of misgovernment in domestic affairs. With these premisses we can proceed to consider what extensions of power in the direction of self-government are possible and in what order.

APPENDIX

NOTE ON COUNCILS IN INDIAN GOVERNMENT

The word 'Council' occurs so constantly in connexion with Indian affairs, and in reference to so many different bodies, the particular one intended having often to be inferred from the context, that some explanation of its different significations may be helpful.

The latter is scarcely in question, although it would be prejudiced by any serious degree of misgovernment in domestic affairs. With these premisses we can proceed to consider what extensions of power in the direction of self-government are possible and in what order.

APPENDIX

NOTE ON COUNCILS IN INDIAN GOVERNMENT

The word 'Council' occurs so constantly in connexion with Indian affairs, and in reference to so many different bodies, the particular one intended having often to be inferred from the context, that some explanation of its different significations may be helpful.

There are at least five kinds of councils, of which the constitution and functions are now regulated by the Government of India Act, 5 & 6 George V, c. 61, which consolidated the previously existing law of the subject.

They are described as follows :

(i) The Council of India, also spoken of as the Secretary of State's Council.

(ii) The Governor-General's Executive Council.

(iii) (a) Governors' Executive Councils, in the three Presidencies of Bombay, Madras, and Bengal.

(b) The Executive Councils of Lieutenant-Governors, of which at present the only instance is in Bihar and Orissa. The House of Lords recently threw out a proposal to appoint one for the United Provinces.

(iv) The Indian Legislative Council.

(v) Local Legislatures, or the Legislative Councils of Provinces. These again differ somewhat in character according as they are the Legislative Council of a Governor or Lieutenant Governor who has also an Executive Council or of a Lieutenant Governor or Chief Commissioner who has not.

(i) The Council of India was first constituted in 1859, after the Crown had assumed the government of India. It is associated with the Secretary of State in the greater part of his functions of control. The members are appointed by himself. At first they numbered fifteen. At present they must be not less than ten nor more than fourteen, and nine of them must have served or resided in India for not less than ten years ending not more than five years before appointment. The term of office is seven years, which may be extended for special reasons, to be laid on the tables of the Houses of Parliament, by another five years.

(ii) The Governor-General's Executive Council consists of ordinary and extraordinary members. Of the former there must be five, and the King may when he sees fit appoint a sixth. The Commander-in-Chief is an extraordinary member, and if the Council were to meet in a province which had a Governor, a contingency which has not arisen in recent times, he would be another. Three of the ordinary members must be servants of the Crown with ten years' service in India, while one must be a Barrister or Advocate of five years' standing.

The Governor-General's Executive Council has a long history. From the earliest times of the East India Company the Governor of each Presidency had a Council composed of the senior Company's servants, sometimes to the number of a dozen or more. In 1772 Parliament intervened and passed an act appointing a Governor-General with a Council of four to Bengal, with supervision over the other two Presidencies. The first Government was the historic one of Hastings, Clavering, Monson, Barwell, and Francis. In 1793 the number of the Council was reduced to three. A law member

There are at least five kinds of councils, of which the constitution and functions are now regulated by the Government of India Act, 5 & 6 George V, c. 61, which consolidated the previously existing law of the subject.

They are described as follows :

(ii) The Governor-General's Executive Council.

(iii) (a) Governors' Executive Councils, in the three Presidencies of Bombay, Madras, and Bengal.

(b) The Executive Councils of Lieutenant-Governors, of which at present the only instance is in Bihar and Orissa. The House of Lords recently threw out a proposal to appoint one for the United Provinces.

(iv) The Indian Legislative Council.

(v) Local Legislatures, or the Legislative Councils of Provinces. These again differ somewhat in character according as they are the Legislative Council of a Governor or Lieutenant Governor who has also an Executive Council or of a Lieutenant Governor or Chief Commissioner who has not.

(i) The Council of India was first constituted in 1859, after the Crown had assumed the government of India. It is associated with the Secretary of State in the greater part of his functions of control. The members are appointed by himself. At first they numbered fifteen. At present they must be not less than ten nor more than fourteen, and nine of them must have served or resided in India for not less than ten years ending not more than five years before appointment. The term of office is seven years, which may be extended for special reasons, to be laid on the tables of the Houses of Parliament, by another five years.

(ii) The Governor-General's Executive Council consists of ordinary and extraordinary members. Of the former there must be five, and the King may when he sees fit appoint a sixth. The Commander-in-Chief is an extraordinary member, and if the Council were to meet in a province which had a Governor, a contingency which has not arisen in recent times, he would be another. Three of the ordinary members must be servants of the Crown with ten years' service in India, while one must be a Barrister or Advocate of five years' standing.

The Governor-General's Executive Council has a long history. From the earliest times of the East India Company the Governor of each Presidency had a Council composed of the senior Company's servants, sometimes to the number of a dozen or more. In 1772 Parliament intervened and passed an act appointing a Governor-General with a Council of four to Bengal, with supervision over the other two Presidencies. The first Government was the historic one of Hastings, Clavering, Monson, Barwell, and Francis. In 1793 the number of the Council was reduced to three. A law member

was added in 1833, Macaulay being the first, but his functions were strictly limited to legislative work. In 1861, three years after the transfer of the Government of India to the Crown, the Governor-General's Council was remodelled and received its present constitution, except that there were only five ordinary members until the Act of 1874 gave the option of appointing a sixth.

(iii) (a) The Presidencies of Bombay and Madras retained the Company's system until the Act of 1793, which remodelled the Councils on the same lines as that of the Governor-General, giving them three members. Two members must be public servants of twelve years' standing. Since 1909 the maximum number has been raised to four. On Bengal being elevated to the rank of a Presidency in 1912 the same arrangements came into effect there.

(b) The first instance of a Council being appointed to assist a Lieutenant-Governor was in Bengal in 1910, the provision having been made in the same act as enlarged the Legislative Councils and forming part of the so-called 'Morley-Minto Reforms'. The organization was the same as in the Presidencies.

When Bengal and East Bengal were redistributed in 1912, Bengal becoming a Presidency, the new Lieutenant-Governorship of Bihar and Orissa received an Executive Council because it had been governed by one while part of Bengal. One was proposed for the United Provinces in 1914, but rejected by the House of Lords.

Two important matters which are not mentioned in any statute or statutory rule deserve reference. The first is that for all the great offices dealt with in sub-clauses (ii) and (iii) down, that is, to membership of a Lieutenant-Governor's Executive Council, no term is fixed for the tenure, but a custom, which is rarely departed from, fixes it at five years. The other is that, in the numerous laws passed from time to time to regulate the constitution of Executive Councils, it is nowhere prescribed that any particular member shall be European or Indian. It would therefore have been possible, as far as any prescription of the law is concerned, to have appointed Indians to any or all of the places at any time; but the first appointment of the kind was that of the Law Member of the Governor-General's Executive Council in 1909. Shortly afterwards the Executive Councils of the Presidencies of Bombay and Madras, which had for many years been left at the statutory minimum of two official members, had each an Indian member added to it, and the same course has been followed in the new Executive Councils in the other provinces.

(iv) and (v) Legislative Councils. A fundamental principle underlies the constitution of all the Indian Legislatures—namely, that they are composed of the members of the Executive Government, with additional members appointed for the purpose of making laws and regulations. Where there is an Executive Council it is increased by additional members; where there is a single ruler, the members are associated with him for this purpose. The expression 'additional

was added in 1833, Macaulay being the first, but his functions were strictly limited to legislative work. In 1861, three years after the transfer of the Government of India to the Crown, the Governor-General's Council was remodelled and received its present constitution, except that there were only five ordinary members until the Act of 1874 gave the option of appointing a sixth.

(iii) (a) The Presidencies of Bombay and Madras retained the Company's system until the Act of 1793, which remodelled the Councils on the same lines as that of the Governor-General, giving them three members. Two members must be public servants of twelve years' standing. Since 1909 the maximum number has been raised to four. On Bengal being elevated to the rank of a Presidency in 1912 the same arrangements came into effect there.

(b) The first instance of a Council being appointed to assist a Lieutenant-Governor was in Bengal in 1910, the provision having been made in the same act as enlarged the Legislative Councils and forming part of the so-called 'Morley-Minto Reforms'. The organization was the same as in the Presidencies.

When Bengal and East Bengal were redistributed in 1912, Bengal becoming a Presidency, the new Lieutenant-Governorship of Bihar and Orissa received an Executive Council because it had been governed by one while part of Bengal. One was proposed for the United Provinces in 1914, but rejected by the House of Lords.

Two important matters which are not mentioned in any statute or statutory rule deserve reference. The first is that for all the great offices dealt with in sub-clauses (ii) and (iii) down, that is, to membership of a Lieutenant-Governor's Executive Council, no term is fixed for the tenure, but a custom, which is rarely departed from, fixes it at five years. The other is that, in the numerous laws passed from time to time to regulate the constitution of Executive Councils, it is nowhere prescribed that any particular member shall be European or Indian. It would therefore have been possible, as far as any prescription of the law is concerned, to have appointed Indians to any or all of the places at any time; but the first appointment of the kind was that of the Law Member of the Governor-General's Executive Council in 1909. Shortly afterwards the Executive Councils of the Presidencies of Bombay and Madras, which had for many years been left at the statutory minimum of two official members, had each an Indian member added to it, and the same course has been followed in the new Executive Councils in the other provinces.

(iv) and (v) Legislative Councils. A fundamental principle underlies the constitution of all the Indian Legislatures—namely, that they are composed of the members of the Executive Government, with additional members appointed for the purpose of making laws and regulations. Where there is an Executive Council it is increased by additional members; where there is a single ruler, the members are associated with him for this purpose. The expression 'additional

members' may seem scarcely appropriate where the nucleus of ordinary members is so small and the additional are so many : but, besides the underlying idea of addition for a special purpose, it is the case that the Legislative Councils were first started with very few additional members. The appointment of the Law Member for legislative purposes only in 1833 may be considered a first expression of the idea. The establishment of Legislative Councils dates from 1861, when they were appointed under statute in the Government of India, two Presidencies and two Lieutenant-Governorships. The numbers of additional members were small, between the extreme limits of four and twelve. A majority of them were officials and all were nominated. An Act of 1892 increased the numbers, although the highest possible in any Council was only twenty, and introduced the elective principle by providing for the election of some representatives of groups of Municipalities and District Boards. The Act of 1909 provided for a great increase of numbers - to sixty in the Legislative Council of India, fifty each in the two Presidencies and in Bengal, and twenty to thirty in the minor provinces. The elective element was largely increased, and in all, except the Legislative Council of India, a non-official, although not necessarily an elected, majority was provided for.

Legislative Councils now exist in Bombay, Madras, Bengal, Bihar, and Orissa, the United Provinces of Agra and Oudh, the Punjab, Burma, the Central Provinces and Assam. Thus the only divisions of British India in which they have not been established are the territories - either small enclaves among Native States, or Frontier districts - for which the Government of India has a larger proportion of direct responsibility than in the provinces administered by what in India are termed 'Local Governments' - i.e. Presidency or Provincial Governments or Administrations.

CHAPTER II

CHANGES WITHIN THE EXISTING FRAME OF GOVERNMENT

§ 1. It will be well to consider first what changes can be made within the frame of government as it exists at present. Obviously there is very little room for change within that frame because comparatively small changes would result in transferring the reality of power in Provincial affairs *en bloc* from the Governor and his permanent officials to the elected majority of the Council, in fact in revolution. Short of actual revolution there is the risk that concessions may

members' may seem scarcely appropriate where the nucleus of ordinary members is so small and the additional are so many : but, besides the underlying idea of addition for a special purpose, it is the case that the Legislative Councils were first started with very few additional members. The appointment of the Law Member for legislative purposes only in 1833 may be considered a first expression of the idea. The establishment of Legislative Councils dates from 1861, when they were appointed under statute in the Government of India, two Presidencies and two Lieutenant-Governorships. The numbers of additional members were small, between the extreme limits of four and twelve. A majority of them were officials and all were nominated. An Act of 1892 increased the numbers, although the highest possible in any Council was only twenty, and introduced the elective principle by providing for the election of some representatives of groups of Municipalities and District Boards. The Act of 1909 provided for a great increase of numbers - to sixty in the Legislative Council of India, fifty each in the two Presidencies and in Bengal, and twenty to thirty in the minor provinces. The elective element was largely increased, and in all, except the Legislative Council of India, a non-official, although not necessarily an elected, majority was provided for.

Legislative Councils now exist in Bombay, Madras, Bengal, Bihar, and Orissa, the United Provinces of Agra and Oudh, the Punjab, Burma, the Central Provinces and Assam. Thus the only divisions of British India in which they have not been established are the territories - either small enclaves among Native States, or Frontier districts - for which the Government of India has a larger proportion of direct responsibility than in the provinces administered by what in India are termed 'Local Governments' - i.e. Presidency or Provincial Governments or Administrations.

CHAPTER II

CHANGES WITHIN THE EXISTING FRAME OF GOVERNMENT

§ 1. It will be well to consider first what changes can be made within the frame of government as it exists at present. Obviously there is very little room for change within that frame because comparatively small changes would result in transferring the reality of power in Provincial affairs *en bloc* from the Governor and his permanent officials to the elected majority of the Council, in fact in revolution. Short of actual revolution there is the risk that concessions may

have the effect, not so much of transferring power, as of paralysing it, and rendering government uncertain and ineffective.

Keeping these conditions in view let us begin our examination from the top. Membership of the Executive Council is the highest position below the Governor; for the last five years there has been an Indian member in all of the Executive Councils. One demand is for the increase of such members. To put them in a majority would practically be revolution; but, short of that, the addition of one member would still leave the Governor with an official majority, even if one of the two Civilian members were retrenched. The strongest objection to this, one which will certainly not escape any one experienced in Indian Government, is that to put the Indian members in a majority of one over, or even on an equality of number with, the official members (leaving the Governor out of the count) will place the Governor in a position so strained and delicate as to be intolerable. Put briefly he can at present avoid taking sides, except when he sees that the Indian has too strong a case to be ignored; in the other possible conditions he would have to form an opinion and take sides on every small question which was brought up, and that is too much to expect of a man without local experience. For a Lieutenant-Governor it would be less difficult, but he too would have the odious position of being constantly in opposition to his Indian colleagues. The position is impossible until the Indian members can be given such a degree of responsibility as will keep their demands within bounds. The tendency of the existing system being already towards the undue development of the critical faculty without concomitant responsibility, it is undesirable to make a change of which the main effect would be to intensify that tendency.

If increase of numbers is barred for the present can anything be done to make the existing membership more representative and acceptable? Election has been suggested, and it has been objected, reasonably perhaps, that the Governor should not have a colleague forced upon him.

Perhaps it would be a real advance if, while selection were left to the Governor, it were understood that he would ordinarily and whenever possible select from amongst the elected members, and would do so in a way to represent average opinion. This proposal is not without its difficulties. In the United Kingdom certainly there is generally one outstanding leader who must be summoned to form a

have the effect, not so much of transferring power, as of paralysing it, and rendering government uncertain and ineffective.

Keeping these conditions in view let us begin our examination from the top. Membership of the Executive Council is the highest position below the Governor; for the last five years there has been an Indian member in all of the Executive Councils. One demand is for the increase of such members. To put them in a majority would practically be revolution; but, short of that, the addition of one member would still leave the Governor with an official majority, even if one of the two Civilian members were retrenched. The strongest objection to this, one which will certainly not escape any one experienced in Indian Government, is that to put the Indian members in a majority of one over, or even on an equality of number with, the official members (leaving the Governor out of the count) will place the Governor in a position so strained and delicate as to be intolerable. Put briefly he can at present avoid taking sides, except when he sees that the Indian has too strong a case to be ignored; in the other possible conditions he would have to form an opinion and take sides on every small question which was brought up, and that is too much to expect of a man without local experience. For a Lieutenant-Governor it would be less difficult, but he too would have the odious position of being constantly in opposition to his Indian colleagues. The position is impossible until the Indian members can be given such a degree of responsibility as will keep their demands within bounds. The tendency of the existing system being already towards the undue development of the critical faculty without concomitant responsibility, it is undesirable to make a change of which the main effect would be to intensify that tendency.

If increase of numbers is barred for the present can anything be done to make the existing membership more representative and acceptable? Election has been suggested, and it has been objected, reasonably perhaps, that the Governor should not have a colleague forced upon him.

Perhaps it would be a real advance if, while selection were left to the Governor, it were understood that he would ordinarily and whenever possible select from amongst the elected members, and would do so in a way to represent average opinion. This proposal is not without its difficulties. In the United Kingdom certainly there is generally one outstanding leader who must be summoned to form a

ministry, but in countries with a less clearly defined party system it is frequently a question which of several leaders will be best able to undertake the duty. The member so selected could hardly be placed in any position of direct dependence on his continuing to represent a majority of opinion, e.g. he could hardly be turned out on a vote of 'No Confidence'. One reason is that the principle of secrecy as to Executive Council decisions would prevent its being known how far he was responsible for decisions unpalatable to the majority, while he could hardly be expected to resign each time that he came into conflict with the official majority of the Executive Council. With all its drawbacks, however, this step may be recommended for consideration. The tendency at present is to look for safe men, or men of proved ability in administration. Something would be gained if the selection had to be whenever possible amongst the representatives of popular opinion, and it would be a good thing also that practical experience in administration should be acquired by some of these. So far as Bengal is concerned there is no reason to think that with the condition contemplated the men obtainable would be at all inferior to those hitherto appointed.

§ 2. Taking next the Legislative Council: Its composition has been analysed above. There is now an elected majority which is likely before long to be further increased when constituencies can be devised for two interests which are at present represented by nomination. It is true that this majority is only effective if the whole of it acts together, or if as many nominated members act with it as elected members secede from it. In Bengal the Indian nominated members do commonly act with it. On the other hand it can usually be neutralized if all the European members side with the officials. This may be galling to the Indians, but in the conditions of Bengal it is not unreasonable. The great bulk of the enormous trade and industry is in the hands of Europeans. There is no artificial bar to the progress of the Indian in these fields, as his success in Bombay sufficiently establishes; but the genius of the Bengalis has not yet run in this direction, and, as a consequence perhaps, the popular leaders are by no means sound on economic subjects according to Western ideas, and if the Europeans were not in Council to protect their own interests they might conceivably sometimes fare badly. Fuller representation might be obtained by increasing the number of the Council, but this cannot be done until power is made over unreservedly

ministry, but in countries with a less clearly defined party system it is frequently a question which of several leaders will be best able to undertake the duty. The member so selected could hardly be placed in any position of direct dependence on his continuing to represent a majority of opinion, e. g. he could hardly be turned out on a vote of 'No Confidence'. One reason is that the principle of secrecy as to Executive Council decisions would prevent its being known how far he was responsible for decisions unpopular to the majority, while he could hardly be expected to resign each time that he came into conflict with the official majority of the Executive Council. With all its drawbacks, however, this step may be recommended for consideration. The tendency at present is to look for safe men, or men of proved ability in administration. Something would be gained if the selection had to be whenever possible amongst the representatives of popular opinion, and it would be a good thing also that practical experience in administration should be acquired by some of these. So far as Bengal is concerned there is no reason to think that with the condition contemplated the men obtainable would be at all inferior to those hitherto appointed.

§ 2. Taking next the Legislative Council: Its composition has been analysed above. There is now an elected majority which is likely before long to be further increased when constituencies can be devised for two interests which are at present represented by nomination. It is true that this majority is only effective if the whole of it acts together, or if as many nominated members act with it as elected members secede from it. In Bengal the Indian nominated members do commonly act with it. On the other hand it can usually be neutralized if all the European members side with the officials. This may be galling to the Indians, but in the conditions of Bengal it is not unresolvable. The great bulk of the enormous trade and industry is in the hands of Europeans. There is no artificial bar to the progress of the Indian in these fields, as his success in Bombay sufficiently establishes; but the genius of the Bengalis has not yet run in this direction, and, as a consequence perhaps, the popular leaders are by no means sound on economic subjects according to Western ideas, and if the Europeans were not in Council to protect their own interests they might conceivably sometimes fare badly. Fuller representation might be obtained by increasing the number of the Council, but this cannot be done until power is made over unsparingly

to the majority, for the official numbers can hardly be further increased. It is doubtful indeed whether for the moment any considerable increase of numbers is desirable. The 'intellectuals' are already very fully represented by lawyers and editors very much of one type and cast of opinion; and, before any considerable increase is arranged, it would be well to see whether any modification of the elective system would produce at least some members more truly representative of the smaller landowners and well-to-do traders who are numerous in Bengal.

It has already been remarked that the system of election by the non-official members of District Boards and Municipalities does not give satisfaction to advanced opinion. These bodies certainly formed convenient ready-made constituencies, and, probably, they contained the men who would have been elected under any system which required that the representative should have a local connexion, but from the point of view of giving any real measure of popular representation they are altogether too indirect. The elected members of the various boards, perhaps two-thirds of the whole, may have been elected years before the Council election. It is highly improbable that in connexion with their own candidature any question of Council politics has ever been raised, nor would it be desirable that municipal elections should turn on Council politics; municipal affairs would suffer, and the franchise is absurdly low even for municipal purposes. It would probably be an advantage if, instead of, perhaps, 20,000 people in a district being represented in so indirect a manner that they have no practical voice in the matter, 1,000 or 2,000 were represented directly. The franchise would be based on payment of cesses in the country and rates in towns, and should be fixed at a level which experience would suggest as giving a fair proportion of literacy and intelligence. There might be alternative professional or educational qualifications. Such direct representation is possible because it already exists for Mohammedans who are entitled to vote for their representatives upon a small but not insignificant property franchise. That the Mohammedan should have a direct vote for a member of Council while he has not, is already a loudly proclaimed grievance of the Hindu. With an increase of direct representation the elective system would at once obtain a more respectable character since the actual voters would be multiplied enormously. If it be decided to make any further increase in the numbers of the Legislative

to the majority, for the official numbers can hardly be further increased. It is doubtful indeed whether for the moment any considerable increase of numbers is desirable. The 'intellectuals' are already very fully represented by lawyers and editors very much of one type and cast of opinion; and, before any considerable increase is arranged, it would be well to see whether any modification of the elective system would produce at least some members more truly representative of the smaller landowners and well-to-do traders who are numerous in Bengal.

It has already been remarked that the system of election by the non-official members of District Boards and Municipalities does not give satisfaction to advanced opinion. These bodies certainly formed convenient ready-made constituencies, and, probably, they contained the men who would have been elected under any system which required that the representative should have a local connexion, but from the point of view of giving any real measure of popular representation they are altogether too indirect. The elected members of the various boards, perhaps two-thirds of the whole, may have been elected years before the Council election. It is highly improbable that in connexion with their own candidature any question of Council politics has ever been raised, nor would it be desirable that municipal elections should turn on Council politics; municipal affairs would suffer, and the franchise is absurdly low even for municipal purposes. It would probably be an advantage if, instead of, perhaps, 20,000 people in a district being represented in so indirect a manner that they have no practical voice in the matter, 1,000 or 2,000 were represented directly. The franchise would be based on payment of cesses in the country and rates in towns, and should be fixed at a level which experience would suggest as giving a fair proportion of literacy and intelligence. There might be alternative professional or educational qualifications. Such direct representation is possible because it already exists for Mohammedans who are entitled to vote for their representatives upon a small but not insignificant property franchise. That the Mohammedan should have a direct vote for a member of Council while he has not, is already a loudly proclaimed grievance of the Hindu. With an increase of direct representation the elective system would at once obtain a more respectable character since the actual voters would be multiplied enormously. If it be decided to make any further increase in the numbers of the Legislative

Councils, it certainly seems that the most reasonable and also the safest course would be to give most of it to persons directly elected by voters with a property qualification. The constituencies and the persons chosen by them would speak for a class which comprises the largest and possibly the most conservative interests in the country. The objection which might be raised that the smaller municipal and district board voters would be disfranchised would be purely academic, since this class has as yet acquired no scintilla of interest in the matter. The arguments for reform in the election of two of the largest classes in the Council apply equally in the case of the representation of the Calcutta Corporation and University, which is organized on the same indirect system without any increase of strength to Government, but which causes considerable popular discontent.

It should be clearly understood that any standard of enfranchisement which can reasonably be contemplated will give but a small number of voters in proportion to total population. Comparatively few can exercise any real political influence, and the result will probably only give one voter amongst several hundred people.

§ 3. Supposing that we have obtained a Council as representative as existing conditions will allow, the next question is what additional share in the Government we can give it. So far as the legislative function goes we have already been liberal. We have now to consider what functions of an administrative character can be given. Here we shall find ourselves closely hedged in by limitations of two classes. The first consists in the fact that there are important branches of the administration with which at present no Indian administrator would agree to the Legislative Council meddling, the second in the exceeding difficulty of finding fresh revenue for new enterprises. The most dangerous examples of the first class, the Army and the Railways, are protected by being under the direct control of the Government of India, but there are others of which it will suffice to instance the police. This department is excessively unpopular, and even those who might be expected to speak with a sense of responsibility will produce hare-brained schemes for dispensing with its most important functions or performing them by amateur effort. It would be necessary to protect this and probably many other departments from dangerous experiments by the Legislative Council.

The prestige of the British connexion depends more than

Councils, it certainly seems that the most reasonable and also the safest course would be to give most of it to persons directly elected by voters with a property qualification. This department is excessively unpopular, and even those who might be expected to speak with a sense of responsibility will produce hare-brained schemes for dispensing with its most important functions or performing them by amateur effort. It would be necessary to protect this and probably many other departments from dangerous experiments by the Legislative Council.

The prestige of the British connexion depends more than

anything else on the maintenance of public order and security, and it is impossible that any branch of Government, the efficiency of which is considered vital to this object, should become the subject of rash or amateur experiment. It is because of the need of the strong hand in some parts of the field of Government that the autocratic system continues, although over wide ranges a much more liberal system might be both safe and desirable.

Where it is necessary to protect departments from rash interference the only apparent means of doing so is to withhold control of supply. The least safeguard that could possibly suffice would be for Government to retain the power of continuing the supply for such departments from one year to succeeding years. To this course, however, there are the gravest possible objections. The saving merit of our present system in India is efficiency. Law, at any rate, is enforced and order maintained. But the efficiency of a Government which cannot revise its estimates and bring them up to date in harmony with contemporary needs will rapidly be undermined. To enable elected members to refuse a revision of estimates year after year would mean giving them the power to deprive the existing system of its saving quality of thoroughness. It would enable them slowly but surely to ruin the character of the executive they were criticizing in order to bring pressure to bear on it. On the other hand it would make them in no way more responsible than at present for the proper conduct of public affairs.

One method by which the Legislative Council might be brought into closer touch with the realities of administration might be a system of Committees, comparable to those of the French Chamber of Deputies. The essential parts of that system are that the whole of the Chamber is divided into bureaux, the members being chosen by lot. Each bureau elects one member to each Committee which deals with projects of law, and three to the Budget Committee. So far as concerns legislation, the system of select committees, elected by the Council and generally representative of all the interests involved, is probably as suitable to present Indian conditions as anything that could be borrowed from the French. In the system of the Budget Committee, however, with its separate commission for each department of the administration and with a reporter for each commission it is possible that fruitful suggestions could be found, although there are also snares to be avoided. The French system appears to be intolerably slow, resulting in a great

In the system of the Budget Committee, however, with its separate commission for each department of the administration and with a reporter for each commission it is possible that fruitful suggestions could be found, although there are also snares to be avoided. The French system appears to be intolerably slow, resulting in a great

deal of the work of administration being carried on by votes of account, and also to have a tendency to extravagance. On the other hand it results in each department of the administration coming under the special scrutiny of a commission which sits practically permanently. At any rate, without pressing the French example further, it is possible that the Finance Committee might be made more effective than it is. At present, as we have seen, it deals only with that very limited portion of the Budget which the Government considers optional and only sits when the Budget is ready. It might be a permanent committee and review at leisure all schemes as they are prepared, and it might be larger than it is, and have subsections to deal with each important administrative department.

§ 4. This rough sketch appears to include all the progress possible under the existing frame of government, and it presumes the continuance of full reserve power in the Government of India, if not in the Governor himself. It is undoubtedly open to many serious criticisms. The various concessions enumerated, in order to have much effect, would have to be given very nearly at one time, and there would be little to concede afterwards until the final plunge into responsible government could be taken. The change in the practice of selection of the Indian Executive Councillor and the improvement of the system of election to a large number of places on the Legislative Council might be made at the earliest convenient opportunity, and with them some control of revenue might have to be given. Further extensions of that control might no doubt be made from time to time, otherwise it is difficult to see that any further advance is possible. The position of the Indian Executive Councillor between his colleagues and the Legislative Council would be delicate and might not work well. It would be difficult to provide against causes of quarrel over supply. The Legislative Council might find that they had much less power than they expected, since though they could settle the direction of new developments, they could not control the Executive in details; they would vote the money, but an irresponsible executive would spend it, and the work of the Legislative Council would not give much practical training in the business of administration.

CHAPTER III

ALTERNATIVE SCHEME FOR EXPANSION OF
SELF-GOVERNMENT

§ 1. It has been insisted on that there are certain Departments of Government, the integrity and efficiency of which are so vital to the British connexion, that in existing conditions they could not be submitted to popular control, desirable as that control may be in other parts of the field. It is also the case that in all the great Provinces, although in their constitution they have the same element of popular representation as Bengal, and similar need for its expansion, there are also large districts inhabited by primitive races which are entirely excepted from that system, and are governed by the Executive purely autocratically under different and often very elementary codes of law. There is no prospect that within any assignable period any considerable part of these areas will be able to share in the progress towards autonomy which we contemplate.

These two conditions—that throughout whole provinces there are certain departments and functions of government, and that in each province there are considerable areas which cannot be submitted to popular control but must continue to be administered autocratically—bring us to an alternative which has been suggested. It is that for these departments in which it can be done safely some form of responsible as distinct from merely representative government should be instituted forthwith, while the remaining departments and the excepted areas would continue to be administered under the present system, the functions of constitutional ruler in the one case and of actual administrator in the other being united in the person of the Governor. The type of responsible government might be as liberal as the degree of development of the people would warrant. The exercise of caution would operate less by devising checks on its action than by selecting and limiting the branches of revenue and expenditure which would be made over to it. The proposal has at any rate this in its favour, that it takes advantage of an existing duality in administration, and merely readjusts the boundaries so as to define more clearly the field of the strong hand from that of popular freedom, possibly to the real extension of the latter.

CHAPTER III

ALTERNATIVE SCHEME FOR EXPANSION OF
SELF-GOVERNMENT

§ 1. It has been insisted on that there are certain Departments of Government, the integrity and efficiency of which are so vital to the British connexion, that in existing conditions they could not be submitted to popular control, desirable as that control may be in other parts of the field. It is also the case that in all the great Provinces, although in their constitution they have the same element of popular representation as Bengal, and similar need for its expansion, there are also large districts inhabited by primitive races which are entirely excepted from that system, and are governed by the Executive purely autocratically under different and often very elementary codes of law. There is no prospect that within any assignable period any considerable part of these areas will be able to share in the progress towards autonomy which we contemplate.

These two conditions—that throughout whole provinces there are certain departments and functions of government, and that in each province there are considerable areas which cannot be submitted to popular control but must continue to be administered autocratically—bring us to an alternative which has been suggested. It is that for these departments in which it can be done safely some form of responsible as distinct from merely representative government should be instituted forthwith, while the remaining departments and the excepted areas would continue to be administered under the present system, the functions of constitutional ruler in the one case and of actual administrator in the other being united in the person of the Governor. The type of responsible government might be as liberal as the degree of development of the people would warrant. The exercise of caution would operate less by devising checks on its action than by selecting and limiting the branches of revenue and expenditure which would be made over to it. The proposal has at any rate this in its favour, that it takes advantage of an existing duality in administration, and merely readjusts the boundaries so as to define more clearly the field of the strong hand from that of popular freedom, possibly to the real extension of the latter.

The suggestion is that for such of the departments of Government as were made over to it, the Legislature should be really supreme, and should administer by an executive chosen from its own members and responsible to it. A question which meets us *in limine* is whether the remainder of the Government should continue as at present with the admixture of the popular element which it has already acquired, or should the reserved departments be managed autocratically as they were when there was no popular element? There can surely be no doubt that the former alternative is the correct one. If the great majority of the departments were to be made over and only one or two to be reserved there might be little objection to placing the latter under the autocratic control of the ruler. We must assume, however, that the opposite condition will prevail, that at first only a small portion of the burden of government will be made over to the popular representatives and that tentatively. In that case the rest must remain as at present. To act otherwise would mean retrogression not merely in appearance but in fact; it would mean, for instance, that such influence as the elected portion of the Legislature has already exercised on police legislation had been negative, or even positively harmful—a position which could not easily be established.

§ 2. In contrast with the proposed experiment in responsible government, the other portion has been just spoken of as continuing as at present. It will, however, be understood, that the various changes within the existing frame which have been discussed in the earlier part of this memorandum, will, or may be, applicable to that portion. For instance, the system of Standing Committees, while perhaps not suitable for all Departments, would serve as a training ground in the administration of such as might later on be transferred to the responsible section of the Government.

A further question is—Would the new Legislature be the same as the existing one, or elected on a different system? It might seem desirable that a popular assembly, especially in so populous a country, should be much more numerous than the present popular element in the Legislative Councils. Experience has, however, shown that if all classes and interests are to be fairly represented the number of reasonably competent men available is extremely limited. If it were only a question of representing the 'intellectuals', scores or even hundreds of lawyers and editors would come forward, but such men can only represent their own class, while

The suggestion is that for such of the departments of Government as were made over to it, the Legislature should be really supreme, and should administer by an executive chosen from its own members and responsible to it. A question which meets us *in limine* is whether the remainder of the Government should continue as at present with the admixture of the popular element which it has already acquired, or should the reserved departments be managed autocratically as they were when there was no popular element? There can surely be no doubt that the former alternative is the correct one. If the great majority of the departments were to be made over and only one or two to be reserved there might be little objection to placing the latter under the autocratic control of the ruler. We must assume, however, that the opposite condition will prevail, that at first only a small portion of the burden of government will be made over to the popular representatives and that tentatively. ---	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------	------

amongst the great interests of the country, the great and small landholders, the traders, and especially amongst the Mohammedans, who form a full half of the population in Bengal, the number of men competent to take an intelligent part in the Legislature is still very small. Probably therefore the non-official portion of the present Legislature, with such improvements in the system of election as have been suggested in the earlier part of this paper, would be as satisfactory a body as can at present be devised. It is perhaps anomalous to suggest that the nominated non-officials should be included in the responsible legislature. So long, however, as their number remains considerable, and as some important interests can only be represented by nomination, it would be pedantic to limit the assembly to the elected members in obedience to a principle which in the circumstances is hardly more than a scruple. It is scarcely necessary to cite further very obvious arguments against having two sets of legislators. Double sets of constituencies and elections would be burdensome in every way, and also hopelessly confusing to people who are still merely at the threshold of practical politics.

It is, no doubt, a difficulty, although perhaps in the earlier stages only a theoretical one, that the dissolution of the responsible assembly would involve the dissolution of the other also. It will probably be a considerable time before a regular party system is so fully established that the difficulty will become real. Probably the election should be in the first instance to the responsible assembly, and should carry with it membership of the other. Also, in order to avoid deadlocks, it might be well that membership of the non-responsible portion should continue after a dissolution until the new election was complete. These tentative suggestions have no higher aim than to propose a bridge for a period of transition. Sooner or later, the numbers of the responsible body must be greatly increased, and when that happens, it might be found suitable to constitute the non-official portion of the other by delegation from it.

The executive should consist of three, or certainly not more than five, of the Council, selected as all Cabinets are.

The Governor would be President of the responsible section, as he is of the present legislature. If the experiment matured, however, and the assembly showed itself sane and really responsible, he would probably desire to withdraw more and more from its deliberations and gradually to retire into the position of a constitutional ruler who

[illegible]

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other variables constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other variables constant.

The executive should consist of three, or certainly not more than five, of the Council, selected as all Cabinets are.

The Governor would be President of the responsible section, as he is of the present legislature. If the experiment matured, however, and the assembly showed itself sane and really responsible, he would probably desire to withdraw more and more from its deliberations and gradually to retire into the position of a constitutional ruler who

is consulted by the Executive, but takes no part in the deliberations of the assembly. The transition stage might be provided for as follows: There would be an official Vice-President who would replace the Governor when he desired to attend but was prevented from doing so. There would also be an elected Vice-President who would preside when the Governor or his substitute did not appear and who should eventually develop the character of a Speaker. In the early stages of a representative assembly without practical administrative experience, it would be well to provide for a hearing to be given to the voice of official experience and authority. It is not desirable that the Governor should habitually lecture the assembly. His addresses should be limited to occasions of exceptional gravity. It might, therefore, be provided that the Governor should have the right to send a representative to address the House on any subject before it as an expert who should have all the rights of a member for purposes of debate but not of voting.

§ 3. Having obtained a Legislature and a Cabinet, the next question is what it should be given to do, and how it should be provided with the means of doing it. The departments of Government have been enumerated near the beginning of this paper. We shall consider first the administrative departments which might be suitable for transfer, and then the revenue-producing departments which might support them. Some, of course, partake of both characters. It is in those under the General Secretary—

- (a) Education ;
- (b) Local Self-Government ;
- (c) Sanitation ;

that the public are most generally interested, and it is regarding those that there are most demands for improvements.

Other Departments which might be found suitable for transfer at an early or comparatively early stage are—

- (d) Registration ;
- (e) Co-operative Credit ;
- (f) Agriculture ;
- (g) Forests ;
- (h) Public Works.

From some of these the first instalment might be formed, but the amounts of instalments and the question of times and seasons are matters to be settled by the responsible authorities. There is much to be said, however, for insisting

Figure 1

A schematic diagram illustrating the experimental setup for measuring the effect of temperature on the rate of reaction between hydrogen peroxide and potassium iodide. The setup includes a reaction vessel containing the reactants, a thermometer to monitor temperature, and a gas syringe to measure the volume of oxygen gas produced over time.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, and t-statistics for each variable.

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

that the first experiment should be really experimental. It might be made definitely for a period of five years, a further extension or even its continuance to be dependent on the results. But if it were renewed at all, it should be for some definite minimum period.

One of the most important practical difficulties would be the delimitation of the spheres of the two Governments. Departments come in contact and may overlap at a hundred points with unlimited opportunities for friction. The one possible safeguard is to make the Governor the sole and final arbiter of such questions.

The transfer of (a) Elementary Education and of (b) Local Self-Government would be peculiarly easy, because they are already administered by bodies which are mainly composed of non-officials.

It will be convenient to describe briefly what the relations of Government to local self-governing bodies are. The laws under which they are constituted give the Government power to see that the functions for which they are appointed are carried out. If they fail to perform them, if deliberately or by neglect they cause oppression, it may suspend their resolutions, or it may supersede them temporarily and administer their duties by its own agency until defects are remedied. In cases where they have failed to assess justly, or to collect their taxes, and have suffered the administration to deteriorate to a scandalous degree, Government has not failed to apply the remedy. These disagreeable duties have fortunately to be performed but rarely. Constructive action is as much more frequent as it is more satisfactory. India is still deficient in most of the commonplace conveniences of modern civilization. The need, and of late the demand, for schemes of water-supply and drainage, and better equipped hospitals has become pressing, while everywhere there is the difficulty of lack of the necessary agency and of money. Government acts by suggesting schemes when they are not suggested locally, by lending experts to prepare or revise them, by advising on finance and pressing for such increases of rating as will support them. Usually any satisfactory scheme is found to be beyond the immediate resources of the body concerned. When public liberality has done what it can, Government will lend the rest upon the security of the rates as far as they can go, and if that is still not enough it will probably grant a subvention from the provincial revenue. Finally, if the local body has no officer technically competent to carry out the scheme Govern-

that the first experiment should be really experimental. It might be made definitely for a period of five years, a further extension or even its continuance to be dependent on the results. But if it were renewed at all, it should be for some definite minimum period.

One of the most important practical difficulties would be the delimitation of the spheres of the two Governments. Departments come in contact and may overlap at a hundred points with unlimited opportunities for friction. The one possible safeguard is to make the Governor the sole and final arbiter of such questions.

The transfer of (a) Elementary Education and of (b) Local Self-Government would be peculiarly easy, because they are already administered by bodies which are mainly composed of non-officials.

It will be convenient to describe briefly what the relations of Government to local self-governing bodies are. The laws under which they are constituted give the Government power to see that the functions for which they are appointed are carried out. If they fail to perform them, if deliberately or by neglect they cause oppression, it may suspend their resolutions, or it may supersede them temporarily and administer their duties by its own agency until defects are remedied. In cases where they have failed to assess justly, or to collect their taxes, and have suffered the administration to deteriorate to a scandalous degree, Government has not failed to apply the remedy. These disagreeable duties have fortunately to be performed but rarely. Constructive action is as much more frequent as it is more satisfactory. India is still deficient in most of the commonplace conveniences of modern civilization. The need, and of late the demand, for schemes of water-supply and drainage, and better equipped hospitals has become pressing, while everywhere there is the difficulty of lack of the necessary agency and of money. Government acts by suggesting schemes when they are not suggested locally, by lending experts to prepare or revise them, by advising on finance and pressing for such increases of rating as will support them. Usually any satisfactory scheme is found to be beyond the immediate resources of the body concerned. When public liberality has done what it can, Government will lend the rest upon the security of the rates as far as they can go, and if that is still not enough it will probably grant a subvention from the provincial revenue. Finally, if the local body has no officer technically competent to carry out the scheme Govern-

ment will provide one, probably from its staff of sanitary engineers. With work of this kind the educated Indian of the present day is peculiarly in sympathy, and it is therefore suggested as suitable for his first essays in administration.

At first, at any rate, business might be conducted through the present official channels. District Officers and Commissioners have been used to work with these bodies, to assist them in their difficulties and to be patient with their shortcomings, and when the appeal was made to them they would probably continue to work cordially under the new Executive. If they found it impossible to do so the character of the work conducted by self-contained organizations makes it possible to place it under the direct control of the Executive.

(c) Sanitation may be included with Self-Government. The Sanitary Department of a Province consists of a Sanitary Commissioner and his Deputies and of a Sanitary Engineer and his assistants. The work of the former class of officers consists mainly in inspection and in advising local bodies as to improvements. The engineering staff are employed mainly on advising and executing water supply and drainage schemes on behalf of municipalities. It is natural, if not inevitable, that work of this kind, which is really the most important work of local Self-Government, should come under the same control as the rest of that subject.

(d) The Registration Department whose business is to maintain a record of contracts and deeds is a growing one. It is controlled and worked entirely by indigenous agency from the Inspector General downwards. It makes a moderate profit out of fees. Its working is very much a matter of domestic concern, and the District Officer has at present a very slender connexion with it, so that on all counts its transfer should come early in the day.

(e) Co-operative Credit is a most important matter; we may hope that it is destined to have an immense effect upon the social and economic life of the country. It is still in its infancy, and requires close attention and expert guidance. Any widespread breakdown in the early stages might compromise the whole future of the movement. These are reasons why it would not be suitable to transfer it immediately to an inexperienced government, more especially as Indian politicians have so far remained singularly indifferent to it. But the policy is to create Provincial Banks for the control and finance of the movement, and

ment will provide one, probably from its staff of sanitary engineers. With work of this kind the educated Indian of the present day is peculiarly in sympathy, and it is therefore suggested as suitable for his first essays in administration.

At first, at any rate, business might be conducted through the present official channels. District Officers and Commissioners have been used to work with these bodies, to assist them in their difficulties and to be patient with their shortcomings, and when the appeal was made to them they would probably continue to work cordially under the new Executive. If they found it impossible to do so the character of the work conducted by self-contained organizations makes it possible to place it under the direct control of the Executive.

(c) Sanitation may be included with Self-Government. The Sanitary Department of a Province consists of a Sanitary Commissioner and his Deputies and of a Sanitary Engineer and his assistants. The work of the former class of officers consists mainly in inspection and in advising local bodies as to improvements. The engineering staff are employed mainly on advising and executing water supply and drainage schemes on behalf of municipalities. It is natural, if not inevitable, that work of this kind, which is really the most important work of local Self-Government, should come under the same control as the rest of that subject.

(d) The Registration Department whose business is to maintain a record of contracts and deeds is a growing one. It is controlled and worked entirely by indigenous agency from the Inspector General downwards. It makes a moderate profit out of fees. Its working is very much a matter of domestic concern, and the District Officer has at present a very slender connexion with it, so that on all counts its transfer should come early in the day.

(e) Co-operative Credit is a most important matter; we may hope that it is destined to have an immense effect upon the social and economic life of the country. It is still in its infancy, and requires close attention and expert guidance. Any widespread breakdown in the early stages might compromise the whole future of the movement. These are reasons why it would not be suitable to transfer it immediately to an inexperienced government, more especially as Indian politicians have so far remained singularly indifferent to it. But the policy is to create Provincial Banks for the control and finance of the movement, and

once these are in working order its transfer to the New Government would naturally follow.

(f) Scientific Agriculture is still in a very early stage. at present it is mainly a matter of research by European specialists with high scientific attainments, but already there are a good many Indians in the department, and many more are being trained in the new provincial colleges. Before very long the organization will have extended widely, and will consist mainly of indigenous agency occupied in demonstrating the processes arrived at by the research officers. It will be understood that in describing the present stage as elementary very general language is used. It is not intended to belittle the striking achievements which have already been recorded in several provinces. When the stage of demonstration has been established, the department should be ready for transfer.

(g) Forests are an earning department, the profit from which is steadily increasing. It is suggested that their transfer should be postponed to a somewhat late stage, because it will be at least another generation before the highly specialized scientific European control which they require can be mainly replaced by Indian agency. Also Indian opinion is as yet very ignorant of the potentialities of forest management and rather unsympathetic to its policy, owing to the friction which constantly arises between it and the disastrous but ingrained and cherished practices of the people. A government, however, will generally treat its best sources of revenue with some consideration, and by the time that forest working plans are completed and the correct principles of forest treatment in India clearly ascertained, transfer should be possible.

(h) The stage at which Public Works or a portion of them could be made over is not very easy to define. The department has of course to carry out works for all other departments, and therefore from the beginning it would have to serve two masters, which would probably trouble it but little since it is used to serving many. The older government which would make the larger demands on its services would naturally wish to retain control of the personnel and organization as long as possible, but as the sphere of the other increased the time would come when the department could be split up if not transferred.

once these are in working order its transfer to the New Government would naturally follow.

(f) Scientific Agriculture is still in a very early stage. At present it is mainly a matter of research by European specialists with high scientific attainments, but already there are a good many Indians in the department, and many more are being trained in the new provincial colleges. Before very long the organization will have extended widely, and will consist mainly of indigenous agency occupied in demonstrating the processes arrived at by the research officers. It will be understood that in describing the present stage as elementary very general language is used. It is not intended to belittle the striking achievements which have already been recorded in several provinces. When the stage of demonstration has been established, the department should be ready for transfer.

(g) Forests are an earning department, the profit from which is steadily increasing. It is suggested that their transfer should be postponed to a somewhat late stage, because it will be at least another generation before the highly specialized scientific European control which they require can be mainly replaced by Indian agency. Also Indian opinion is as yet very ignorant of the potentialities of forest management and rather unsympathetic to its policy, owing to the friction which constantly arises between it and the disastrous but ingrained and cherished practices of the people. A government, however, will generally treat its best sources of revenue with some consideration, and by the time that forest working plans are completed and the correct principles of forest treatment in India clearly ascertained, transfer should be possible.

(h) The stage at which Public Works or a portion of them could be made over is not very easy to define. The department has of course to carry out works for all other departments, and therefore from the beginning it would have to serve two masters, which would probably trouble it but little since it is used to serving many. The older government which would make the larger demands on its services would naturally wish to retain control of the personnel and organization as long as possible, but as the sphere of the other increased the time would come when the department could be split up if not transferred.

CHAPTER IV

FINANCE OF SELF-GOVERNMENT

§ 1. If the functions of Government are to be divided into two portions under two separate executives, the revenues must also be divided, and it is necessary to consider what arrangements could be made to finance the new or responsible portion.

The apparently natural course would be that out of the heads of revenue at the disposal of the Provincial Government one or more should be made over which would suffice to meet the charges of administration of the departments transferred, and that they should be selected as having a prospect of expansion which would correspond to the expectation of normal development in that administration. In practice the problem is not likely to admit of so simple a solution. Indian revenue is peculiarly responsive to the vicissitudes of the season, the business of Indian budget-making has not inaptly been called 'a gamble on rain'. A failure of the monsoon means loss of crops, loss of land revenue, loss of railway earnings, as well as great direct expense in the relief of famine or scarcity. These are the more conspicuous and direct consequences, but the effects are felt in almost every department of the revenue. Excise, customs, salt tax, stamp fees on litigation, all reflect the diminished spending powers of the people. In budgeting, as they usually do, for a moderate surplus the Government of India doubtless allow for the probability of a poor monsoon in one or two of their provinces. A widely extended failure will convert their surplus into a deficit, while adequate and well-distributed rainfall over the whole of India, a contingency which sometimes, although too rarely, occurs, may swell the surplus to a figure beyond the usual experience of countries which enjoy more stable conditions.

The uncertainty of its revenue has rendered the Government of India reluctant to assign separate heads of revenue to the provinces. In the day of trouble they may be unequal to the charges for which they are intended, or on the other hand they may permit of local extravagance while the country at large is starving. The Government of India therefore long clung to a policy of fixed assignments to the

The Government of India therefore long clung to a policy of fixed assignments to the

ARTICLE 10

PRACTICE OF MEDICINE

It is the duty of the physician to practice medicine in accordance with the highest standards of the profession, and to maintain the highest standards of his own conduct.

The physician should be guided by the principles of the Hippocratic Oath, and should strive to maintain the highest standards of his own conduct. He should be honest, fair, and just in his dealings with his patients, and should not be influenced by the interests of his colleagues or the public. He should be loyal to his profession, and should not engage in any activity that would bring the profession into disrepute. He should be diligent in his study, and should keep himself up to date in his knowledge of the latest advances in medicine. He should be courteous and respectful to his patients, and should not engage in any behavior that would be offensive to them. He should be cooperative with his colleagues, and should not engage in any activity that would be detrimental to the profession. He should be loyal to his country, and should not engage in any activity that would be detrimental to the nation. He should be a good citizen, and should not engage in any activity that would be detrimental to the community. He should be a good father, and should not engage in any activity that would be detrimental to his family. He should be a good neighbor, and should not engage in any activity that would be detrimental to his neighbors. He should be a good friend, and should not engage in any activity that would be detrimental to his friends. He should be a good citizen, and should not engage in any activity that would be detrimental to the community. provinces, fixed, that is, for a term of years, while, when at the end of a prosperous year it found itself in possession of a large surplus, it used it to make to Provincial Governments doles on which they had principally to rely for launching any schemes involving large initial expenditure. These conditions are gradually being mitigated, the increase of irrigation, the extension of railways, and of manufactures, the exploitation of minerals, all tend to make the revenue less dependent on seasonal vicissitudes, and by slow degrees the Government of India has found itself able to make over completely to Provincial Governments some substantial heads of revenue of an expanding character. With smaller resources, more liable to be seriously diminished by the local failure of a monsoon, Provincial Governments are likely to feel at least as great a difficulty in dividing their revenue by separate heads. It is probable that they would insist on providing for the new section of the Government to a great extent by assignments of revenue fixed for a term of years but supplemented in good years by a share of their surplus. It is of little use to dwell on the demoralizing tendencies of a system of doles when essential characteristics of Indian finance render them inevitable.

These features of Indian revenue have been enlarged upon to what may seem an undue extent because, obviously, the control over and management of revenue is a most essential feature of a responsible Government, and to the extent that it is deprived of these duties its responsibility and its opportunities for training in practical administration are diminished. It is still open to us to hope, however, that the portion of the income of the responsible Government derived from fixed assignments would be as small, and that derived from separate revenue departments under its own control as large, as possible, and with this purpose heads of revenue which might possibly be transferred will be examined.

§ 2. Heads which are at present shared between the Government of India and the Provincial Governments such as Land Revenue and Stamp Duty need not be considered, since there is no object in transferring revenue from specific heads unless the responsibility and training in administration involved in their management can be transferred with them. Much less would specific transfer be made from those which, like Customs, Salt, and ne Railway earnings, the Government of India reserves for itself.

Much less would specific transfer be made from those which, like Customs, Salt, and the Railway earnings, the Government of India reserves for itself.

The following which now belong entirely to the Local Governments may be enumerated :

(a) Municipal Rates and Taxes.

(b) Cesses on Land.

(c) Registration.

(d) Forests.

(e) Excise.

(a and b) The first two heads are not the revenue of Government but of the towns and districts in which they are raised, but they are mentioned because the charges of Local Self-Government are mainly defrayed from them, and if that department is transferred, the control which the Local Government exercises over them necessarily goes with it. Control is exercised by acts of the local Government limiting the powers of levying rates and cesses and by orders under these laws.

(c) *Registration.* The net revenue of this department is the difference between the fees charged and the cost of administration. In Bengal the surplus is about one-third of the total and tends to grow, but it is small, perhaps £40,000. The revenue from Registration would necessarily be transferred at the same time as the administration of the department.

(d) *Forests.* Here, too, the revenue would be transferred at the same time as the administration of the department. The potentialities of this department are great in many provinces, perhaps less so in Bengal than in others, but they will not come into full bearing for another generation. In Bengal the net revenue is roughly equal to that from Registration.

(e) *Excise.* This department provides about one-third of the total revenue of the province, about one and one-third million sterling. The expense of administration is very small. Excise in India is derived from spirits, from milder intoxicants like palm juice and the native substitutes for beer, and from drugs like opium and ganja. Generally it is composed of two parts, the first a regular tariff levied at the place of manufacture, the second license fees for sale, usually settled by auction, limited, however, by various restraints. The Excise revenue is obviously capable of supporting many of the departments of Government, and, once the expense of the transferred departments approximated to it in amount, there would be strong arguments for its transfer. On the other hand, its administration is difficult, requiring great technical skill and the capacity to weigh

Generally it is composed of two parts, the first a regular tariff levied at the place of manufacture, the second license fees for sale, usually settled by auction, limited, however, by various restraints. The Excise revenue is obviously capable of supporting many of the departments of Government, and, once the expense of the transferred departments approximated to it in amount, there would be strong arguments for its transfer. On the other hand, its administration is difficult, requiring great technical skill and the capacity to weigh

coolly all the issues involved in changes of system. It is the natural hunting-ground of the faddist in India, as elsewhere, and it can only be said that its transfer would be a mark of confidence in the judgement and moderation of the new government which could probably only be earned by considerable experience of its character and capabilities. Even then the Government of India would still insist on retaining some control, to prevent the difficulties which might arise if different systems of administration and widely varying rates of duty were established in adjoining provinces.

§ 3. These heads of revenue have all a natural tendency to grow with the general development of the country, and most of them might have their rate of expansion accelerated by an enterprising administration. But, as with Excise, so with most of the other heads, considerations of general policy will confine their increase to a very moderate rate which will hardly suffice to meet the fresh expenditure certain to be demanded by a new Government eager to satisfy urgent popular demands.

The difficulty of finding fresh revenue has probably been but little considered by ordinary Indian politicians, because they have not begun to realize the necessity. Many of them are at the stage of supposing that if the revenue is four millions they have four millions to spend at pleasure; that, for instance, £100,000 can be taken from the police and spent upon education. The cries of the Poverty of India and the Burden of Taxation have been repeated till they have become settled articles of faith, and minds recoil from the possibility of having to increase taxes or to devise new ones. Very little practical handling of affairs would, however, soon teach that nothing is more difficult than retrenchment, especially in a country which has always been parsimoniously administered, and before long they would begin to search for new sources of income.

The Royal Commission on Decentralization, which reported shortly before the Morley-Minto set of reforms came under discussion, gave some attention to the question of increasing the financial powers of Local Governments, and amongst other subjects considered the advisability of allowing them to raise fresh revenue both by increasing the scale of taxation in heads which had been entirely provincialized, and by levying new taxes. It was decided that the time had not come for such a change because the Local Governments had no real responsibility to the taxpayer, but it was considered that when representation in

coolly all the issues involved in changes of system. The Royal Commission on Decentralization, which reported shortly before the Morley-Minto set of reforms came under discussion, gave some attention to the question of increasing the financial powers of Local Governments, and amongst other subjects considered the advisability of allowing them to raise fresh revenue both by increasing the scale of taxation in heads which had been entirely provincialized, and by levying new taxes. It was decided that the time had not come for such a change because the Local Governments had no real responsibility to the taxpayer, but it was considered that when representation in

the Legislative Councils had been increased to the point at which such responsibility might be presumed to be effective it would become both practicable and necessary to grant such powers. If the great increase in the elected element in the Legislative Councils, which was effected shortly afterwards, did not sufficiently fulfil that condition, the further advances in the direction of self-government which are now suggested would certainly do so.

A Tobacco Excise may be instituted as the sort of proposal which would come under consideration. The Government of India levies a Customs duty on imported tobacco, but no Excise on the home-grown article which supplies the greater part by far of Indian consumption. The reasons for abstention at any rate in the past, were simple. Tobacco is grown, rough cured, and prepared for the market almost everywhere, but in such small quantities and by such poor people, that an Excise would be extremely ineffectual. On the other hand, the cigarette habit has increased enormously of late years, and large factories have been set up, equipped with modern machinery, and organized on European or American models, by which cigarettes are turned out in vast quantities, in some cases by millions daily. An Excise on manufactured tobacco may therefore be, or may soon become, practicable. The anomaly of levying it on factories, while leaving the cottage producer untouched, is exactly the same as in the case of the Cotton Excise, which is levied on the product of mills but not on that of the hand-loom weaver.

§ 4. All the suggestions which have been made for the transfer of departments relate to such as are more or less specialized, are not vital to the main business of district administration, and in most cases are shifted very largely or almost entirely by Indians. The District Officer at present is expected to interest himself in all of them, and he can help or hinder them considerably, but they are not his main work, and his connexion with them can hardly be regarded as vital to any of them. If it is found that he can continue to be used under the new system it will be well, if not he must drop out and the wheels of Government will not stop. The changes already indicated will take a long time to carry out. When they are completed it will be necessary to proceed with the great departments of Land Revenue, Police, and Justice in which the Indian Civil Servant finds his principal employment. How the change can be made is not very easy to forecast, but it is to be

the Legislative Councils had been increased to the point at which such responsibility might be presumed to be effective it would become both practicable and necessary to grant such powers. The District Officer at present is expected to interest himself in all of them, and he can help or hinder them considerably, but they are not his main work, and his connexion with them can hardly be regarded as vital to any of them. If it is found that he can continue to be used under the new system it will be well, if not he must drop out and the wheels of government will not stop. The changes already indicated will take a long time to carry out. When they are completed it will be necessary to proceed with the great departments of Land Revenue, Police, and Justice in which the Indian Civil Servant finds his principal employment. How the change can be made is not very easy to forecast, but it is to be

considered that the reserved half of the Provincial Government and the Government of India itself can hardly have been standing still meanwhile, also that by that time the Indian element in the Civil Service will probably have very greatly increased. Some readjustments may be found possible by which the Government of India can reserve to itself these functions which it still considers essential to public safety while transferring the others, but at this distance it seems hardly profitable to speculate upon the precise method of the further changes.

Some further consideration is desirable as to the machinery by which the new Government would exercise the powers entrusted to it. It would be wise and economical if to begin with it made as few changes as possible. For instance, if it took over to-morrow the departments under the General Secretary in Bengal, it would find a Secretariat presided over by an Indian member of the Indian Civil Service with a staff almost wholly consisting of Bengali clerks. It has been suggested that the relations of District Officers and Commissioners to the Local Self-Government departments should continue. If they could it would be clear gain. If not the Secretariat would have much additional work thrown upon it and would be considerably enlarged. When the other departments which have been enumerated came over it would generally be well if the relations of the District Offices to them could be maintained, but if not, at the head of each there is an Inspector General or officer of similar rank, and in each district there is a departmental district officer, e.g. an Inspector of Schools or a District Sub-Registrar. The new Government would, of course, have its own Finance Minister, but it would require no separate treasury, the general treasury at present banks for all sorts of authorities, and account keeping is not a matter of politics.

§ 5. The use of the general treasury would imply the continued use of the existing codes of rules of account and audit, and the audit would be carried on by the Accountants General and other officers of the Finance Department of the Government of India. The position of these officers in dealing with a new and inexperienced administration might be delicate, but their employment would greatly confirm public confidence.

considered that the reserved half of the Provincial Government and the Government of India itself can hardly have been standing still meanwhile, also that by that time the Indian element in the Civil Service will probably have very greatly increased. § 5. The use of the general treasury would imply the continued use of the existing codes of rules of account and audit, and the audit would be carried on by the Accountants General and other officers of the Finance Department of the Government of India. The position of these officers in dealing with a new and inexperienced administration might be delicate, but their employment would greatly confirm public confidence.

[illegible]

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.001	1.2	0.23
Gender of the head of household (Male = 1, Female = 0)	-0.05	0.02	-2.5	0.01
Constant	1.5	0.1	15.0	<0.001

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other factors constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other factors constant.

CHAPTER V

LOCAL SELF-GOVERNMENT

§ 1. In any system of popular government municipal institutions form perhaps the most important element. They affect the citizen most closely and continuously in his domestic concerns, and they afford the truest test of political capacity and the best training ground for aspirants to higher political functions. It is not usual to find the government of a country constituted on a more popular basis than that of its own towns or rural communities, and while we are considering the possibilities of progress in the wider field, it will be well to give some attention to the constitution of these minor bodies.

In Bengal towns with over 3,000 population have generally a municipality with a majority of elected members and a Chairman chosen by the members, though in some small towns all the members, and in a few others the Chairman, are nominated by Government.

Each district has a District Board, and each sub-district—usually there are two or three a local Board. Under these again there may be Village Unions, groups of about ten ordinary agricultural villages with an area of perhaps ten square miles. These Unions are still rare in Bengal, though more frequent in Madras. A great body of official opinion agrees with Sir K. C. Gupta and Sir W. Wedderburn in advocating their extension as the best means of giving the people some control over their own affairs and educating them to political consciousness.

The functions of municipalities are of the kind common in all countries, and include the supervision of elementary public instruction. The primary business of the rural boards is with communications; generally speaking, they have the charge of all communications below the trunk roads. They also control elementary education and support hospitals and dispensaries. Water supply, sanitation—which, however, is still practically non-existent in rural areas—and veterinary hospitals and protective measures against bovine epidemics are also in their charge. For Village Unions there are as yet no fixed rules of election, but the members are chosen at meetings of the inhabitants presided over by a Government officer.

CHAPTER V

LOCAL SELF GOVERNMENT

§ 1. Is any system of popular government municipal institutions form perhaps the most important element. They affect the citizen most closely and continuously in his domestic concerns, and they afford the truest test of political capacity and the best training ground for aspirants to higher political functions. It is not usual to find the government of a country constituted on a more popular basis than that of its own towns or rural communes, and while we are considering the possibilities of progress in the wider field, it will be well to give some attention to the constitution of these minor bodies.

In Bengal towns with over 3,000 population have generally a municipality with a majority of elected members and a Chairman chosen by the members, though in some small towns all the members, and in a few others the Chairman, are nominated by Government.

Each district has a District Board, and each sub-district—usually there are two or three—a Local Board. Under these again there may be Village Unions, groups of about ten ordinary agricultural villages with an area of perhaps ten square miles. These Unions are still rare in Bengal, though more frequent in Madras. A great body of official opinion agrees with Sir K. G. Gupta and Sir W. Wedderburn in advocating their extension as the best means of giving the people some control over their own affairs and educating them to political consciousness.

The functions of municipalities are of the kind common in all countries, and include the supervision of elementary public instruction. The primary business of the rural boards is with communications; generally speaking, they have the charge of all communications below the trunk roads. They also control elementary education and support hospitals and dispensaries. Water supply, sanitation—which, however, is still practically non-existent in rural areas—and veterinary hospitals and protective measures against bovine epidemics are also in their charge.

For Village Unions there are as yet no fixed rules of election, but the members are chosen at meetings of the inhabitants presided over by a Government officer.

Half to two-thirds of the members of Local Boards are elected. The principal franchise is a small payment of agricultural rates, and the electorates are numerous. The remaining members are nominated officials and non-officials. The Board elects its Chairman.

The District Boards are composed partly of delegates elected by the Local Boards and partly of nominated members.

§ 2. They elect their Vice-Chairman, but the Chairman is appointed by Government, and hitherto the District Officer has always been appointed. Undoubtedly the District Officer has better opportunities than any one else of becoming acquainted with every part of the district. He travels over all the roads, penetrates to the most remote corners, and is accordingly able to form an intelligent and disinterested opinion on the relative claims and requirements of different localities. These facts, and possibly other advantages derived from having an officer of his power and influence in charge of the interests of the District Board, have prevented agitation to make the post elective from becoming serious. It is, however, perennial, and there is natural discontent that no non-official can aspire higher than to the less conspicuous post of Vice-Chairman, and the useful drudgery of supervising a large office. It is possible that in this matter the ruling principle of efficiency has been driven too far. A non-official might rarely make so efficient a Chairman as the District Officer, but it does not follow that, because the District Officer ceases to be Chairman, the benefits of his local knowledge and influence need be entirely lost to the Board. On the other hand the position of Chairman is the best conceivable training ground for men of local position who aspire to assist in the government of the country, and it is to be recommended strongly that when changes of greater importance are in contemplation this position should be thrown open to them.

§ 3. For the ordinary cultivator, however, even of the superior class, the affairs of the district, even those of the subdivision, are too remote to possess much interest. He is concerned with the village roads and tanks and primary school. The universal extension of the Village Union system would enable him to look after these which are emphatically his own affairs. It is impossible that a system so centralized as the existing one can deal efficiently with the minutiae of such matters, and the undoubted labour and considerable expense of organizing the change should

Half to two-thirds of the members of Local Boards are elected. The principal franchise is a small payment of agricultural rates, and the electorates are numerous. The remaining members are nominated officials and non-officials. The Board elects its Chairman.

The District Boards are composed partly of delegates elected by the Local Boards and partly of nominated members.

§ 2. They elect their Vice-Chairman, but the Chairman is appointed by Government, and hitherto the District Officer has always been appointed. Undoubtedly the District Officer has better opportunities than any one else of becoming acquainted with every part of the district. He travels over all the roads, penetrates to the most remote corners, and is accordingly able to form an intelligent and disinterested opinion on the relative claims and requirements of different localities. These facts, and possibly other advantages derived from having an officer of his power and influence in charge of the interests of the District Board, have prevented agitation to make the post elective from becoming serious. It is, however, perennial, and there is natural discontent that no non-official can aspire higher than to the less conspicuous post of Vice-Chairman, and the useful drudgery of supervising a large office. It is possible that in this matter the ruling principle of efficiency has been driven too far. A non-official might rarely make so efficient a Chairman as the District Officer, but it does not follow that, because the District Officer ceases to be Chairman, the benefits of his local knowledge and influence need be entirely lost to the Board. On the other hand the position of Chairman is the best conceivable training ground for men of local position who aspire to assist in the government of the country, and it is to be recommended strongly that when changes of greater importance are in contemplation this position should be thrown open to them.

§ 3. For the ordinary cultivator, however, even of the superior class, the affairs of the district, even those of the subdivision, are too remote to possess much interest. He is concerned with the village roads and tanks and primary school. The universal extension of the Village Union system would enable him to look after these which are emphatically his own affairs. It is impossible that a system so centralized as the existing one can deal efficiently with the minutiae of such matters, and the undoubted labour and considerable expense of organizing the change should

not be permitted to delay it unduly. The education in the essential elements of self-government of great numbers of people, who, politically considered, are at present mere automata, ought to lead before very long to a more thorough elective system in the superior bodies and should induce a tendency to more effective popular representation throughout the whole field of government.

CHAPTER VI

ANTICIPATED CRITICISMS AND DIFFICULTIES

§ 1. PROPOSALS of the kind we have been considering are open to a variety of criticism. It may be conceded at once that there is the risk, and indeed the probability, of rash amateur experiment, of lax and inefficient administration, nepotism, and corruption. Defects of this kind are perhaps really exceptionally prevalent in organizations managed by Indians, and inexperienced governments must be peculiarly liable to them. Certainly Indians of the political class have not shone greatly in the sphere of Local Self-Government during the last thirty years, although, of course, they blame everything but themselves. Generally the complaint is that the powers are too restricted and the duties too paltry to merit the attention of men who aspire to conduct a government. When they attain their object they will find that the same drudgery and the same paltriness are the general order, and that opportunities for great and important action are extremely few. Many will weary and again blame anything rather than their own lack of perseverance. Granting all this, it must be urged on the other hand that, even with the limited opportunities hitherto open to them, there have already been many capable Indian administrators, that nothing is more likely to encourage a higher standard than the proposed system of making the concession of each new department dependent on success in managing those already transferred, that the people might well be willing to submit to some loss of efficiency in return for being allowed to arrange matters according to their own views, and that some time or other a beginning must be made.

§ 2. Another objection is possible—ill-treatment of the public servants who will come under their control, parti-

not be permitted to delay it unduly. The education in the essential elements of self-government of great numbers of people, who, politically considered, are at present mere automata, ought to lead before very long to a more thorough elective system in the superior bodies and should induce a tendency to more effective popular representation throughout the whole field of government.

CHAPTER VI

ANTICIPATED CRITICISMS AND DIFFICULTIES

§ 1. PROPOSALS of the kind we have been considering are open to a variety of criticism. It may be conceded at once that there is the risk, and indeed the probability, of rash amateur experiment, of lax and inefficient administration, nepotism, and corruption. Defects of this kind are perhaps really exceptionally prevalent in organizations managed by Indians, and inexperienced governments must be peculiarly liable to them. Certainly Indians of the political class have not shone greatly in the sphere of Local Self-Government during the last thirty years, although, of course, they blame everything but themselves. Generally the complaint is that the powers are too restricted and the duties too paltry to merit the attention of men who aspire to conduct a government. When they attain their object they will find that the same drudgery and the same paltriness are the general order, and that opportunities for great and important action are extremely few. Many will weary and again blame anything rather than their own lack of perseverance. Granting all this, it must be urged on the other hand that, even with the limited opportunities hitherto open to them, there have already been many capable Indian administrators, that nothing is more likely to encourage a higher standard than the proposed system of making the concession of each new department dependent on success in managing those already transferred, that the people might well be willing to submit to some loss of efficiency in return for being allowed to arrange matters according to their own views, and that some time or other a beginning must be made.

§ 2. Another objection is possible—ill-treatment of the public servants who will come under their control, parti-

[illegible]

cularly when these are Europeans. It is possible, especially if the employees resent their position, although the arrangements proposed are such that for a very long time the number of European officers will be extremely small. On the other hand, many Europeans already serve Indians both in public bodies and in private capacities, with satisfaction to both parties. But the main safeguard is that, from a very long time back, a code has been built up of the rights and duties of public servants which no Government could afford to set aside, and reserve powers would no doubt be kept to prevent its being lightly altered: in fact, undue leniency is much more to be feared than harshness.

§ 3. A more real and serious difficulty is the possibility of friction between the servants of the new and those of the older Government. Those departments have been selected to begin with in which the possibilities for such friction are at the lowest, but the danger is no doubt considerable. Skill in covering one's own delinquencies by setting rival authorities by the ears is a peculiarly Indian accomplishment, and occasions might arise when it would have really serious consequences. It is no great stretch of imagination, for instance, to anticipate that in some districts the Excise administration might under Indian control become both oppressive and corrupt, for indeed at all times there is a tendency to these vices which calls for constant vigilance. Their prevalence might seriously threaten the peace and order of the district and bring the excise officials and licensees into conflict with the police, and then a very pretty quarrel might ensue between the District Magistrate and his superiors on the one hand and the new government controlling the Excise Department on the other. If the change were to be made at once the experiment might well be regarded as too risky, but it is not proposed to be made until ventures in less dangerous fields have tested the temper and capacity of both parties.

§ 4. Lastly, there are the possible dangers of abuse or mismanagement in collection of revenue. It has been proposed to hand over to the new government one by one comparatively small sources of revenue with limited powers of increase, possibly also the right to tap some quite new minor sources of taxation. It may be objected that such proposals are in direct conflict with what has been said elsewhere in this paper, and what is certainly very generally asserted as to the great difficulty of raising additional revenue in so poor a country. Any apparent inconsistency

cularly when these are Europeans. It is possible, especially if the employees resent their position, although the arrangements proposed are such that for a very long time the number of European officers will be extremely small. On the other hand, many Europeans already serve Indians both in public bodies and in private capacities, with satisfaction to both parties. But the main safeguard is that, from a very long time back, a code has been built up of the rights and duties of public servants which no Government could afford to set aside, and reserve powers would no doubt be kept to prevent its being lightly altered: in fact, undue leniency is much more to be feared than harshness.

§ 3. A more real and serious difficulty is the possibility of friction between the servants of the new and those of the older Government. Those departments have been selected to begin with in which the possibilities for such friction are at the lowest, but the danger is no doubt considerable. Skill in covering one's own delinquencies by setting rival authorities by the ears is a peculiarly Indian accomplishment, and occasions might arise when it would have really serious consequences. It is no great stretch of imagination, for instance, to anticipate that in some districts the Excise administration might under Indian control become both oppressive and corrupt, for indeed at all times there is a tendency to these vices which calls for constant vigilance. If the change were to be made at once the experiment might well be regarded as too risky, but it is not proposed to be made until ventures in less dangerous fields have tested the temper and capacity of both parties.

§ 4. Lastly, there are the possible dangers of abuse or mismanagement in collection of revenue. It has been proposed to hand over to the new government one by one comparatively small sources of revenue with limited powers of increase, possibly also the right to tap some quite new minor sources of taxation. It may be objected that such proposals are in direct conflict with what has been said elsewhere in this paper, and what is certainly very generally asserted as to the great difficulty of raising additional revenue in so poor a country. Any apparent inconsistency

is readily cleared up. Indian fiscal policy has generally been framed in complete accord with a dictum of Lord Cromer with regard to Egypt, that it is of supreme importance for an alien government to keep the burden of taxation on subject countries light. An autonomous government can take greater risks in this respect and should be much better able to estimate the risks it is taking. So far, in the matters in which they have a voice, Indians have shown no tendency to increase the public burdens unduly; but the contrary. Still, if the autonomous section of the Government used its powers to the full and at the same time the Government of India found itself under compelling necessity, such as that of urgent measures for Imperial defence, to draw heavily on its own reserve resources, the total burden might become excessive and it is probable that the odium would fall wholly upon the Government of India. It will certainly be necessary to impose strict limitations on the power of Local Governments to increase taxation, and particularly in the all important matter of borrowing, since the Government of India itself has never yet been able to borrow all that it wanted or could profitably employ, they must for long submit to remain in leading-strings. The present Local Governments are not allowed to borrow in the open market. They can only borrow from the Government of India and, of course, their wants have to wait upon its requirements. However little consonant such a system may be with the dignity of a responsible Government there would be great direct advantage in arranging that, as far as possible, loans should be taken in this way, and indeed, until the supply of capital for Indian Government loans is much freer than it has yet been, no other course is possible.

§ 5. These proposals and suggestions are submitted for what they may be worth. It is to be remembered that this is not an essay on the problems of satisfying Indian aspirations, or allaying Indian unrest, which cover a much wider and more diversified field. It is an attempt to indicate what progress appears possible now, or likely to be possible for a considerable time to come, in the direction of self-government. The continuity of the process, by which, from a long time past, Indian agency is being increasingly employed and to some extent substituted for English agency in the business of Indian Government, will not be broken, although it may be accelerated, by these changes. The inquiry has been confined to questions of constitutional

is readily cleared up. Indian fiscal policy has generally been framed in complete accord with a dictum of Lord Cromer with regard to Egypt, that it is of supreme importance for an alien government to keep the burden of taxation on subject countries light. An autonomous government can take greater risks in this respect and should be much better able to estimate the risks it is taking. So far, in the matters in which they have a voice, Indians have shown no tendency to increase the public burdens unduly; but the contrary. Still, if the autonomous section of the Government used its powers to the full and at the same time the Government of India found itself under compelling necessity, such as that of urgent measures for Imperial defence, to draw heavily on its own reserve resources, the total burden might become excessive and it is probable that the odium would fall wholly upon the Government of India. It will certainly be necessary to impose strict limitations on the power of Local Governments to increase taxation, and particularly in the all important matter of borrowing, since the Government of India itself has never yet been able to borrow all that it wanted or could profitably employ, they must for long submit to remain in lending strings. The present Local Governments are not allowed to borrow in the open market. They can only borrow from the Government of India and, of course, their wants have to wait upon its requirements. However little consonant such a system may be with the dignity of a responsible Government there would be great direct advantage in arranging that, as far as possible, loans should be taken in this way, and indeed, until the supply of capital for Indian Government loans is much freer than it has yet been, no other course is possible.

§ 5. These proposals and suggestions are submitted for what they may be worth. It is to be remembered that this is not an essay on the problems of satisfying Indian aspirations, or allaying Indian unrest, which cover a much wider and more diversified field. It is an attempt to indicate what progress appears possible now, or likely to be possible for a considerable time to come, in the direction of self-government. The continuity of the process, by which, from a long time past, Indian agency is being increasingly employed and to some extent substituted for English agency in the business of Indian Government, will not be broken, although it may be accelerated, by these changes. The inquiry has been confined to questions of constitutional

progress as distinguished from those of personal advantage and privilege. The question of employing the Indian as the agent of government is entirely different from that of giving him a deciding voice in its policy. Questions of the former kind are continually being solved under the present theoretically autocratic government. Questions of the latter kind are still in a very elementary stage.

§ 6. A beginning has been made by allowing Indians to exercise an influence on the executive through the legislatures. But continued dependence on that method alone is subject to serious drawbacks. The present position of Indian members on the legislatures tends to develop their critical at the expense of their constructive faculties. They are not called upon to devise the means whereby the ends they demand may be compassed, and accordingly their sense of public responsibility goes undeveloped. In the second place the influence they have on the executives cannot be very greatly extended, without impairing the present efficiency of our Government, or even producing a deadlock. Such a deadlock could only be released either by a step backwards, which would be dangerous, or by making the executive responsible to the legislature and removable at its will. Legislators with no experience beyond that of criticizing an alien executive would be called on at one step to assume the whole of its functions.

§ 7. The principle of creating responsible Indian executives side by side with the existing executives in selected provinces, and of gradually transferring the functions of government from one to the other is suggested as a means of avoiding the dilemma. The existing executives will provide a standard of efficiency and purity in administration by which the Indian executives, legislatures, and electorates can judge their own, and be judged by us. In order to establish a convincing case for the further extension of their powers they will have to show that their own government compares not unfavourably with that which it is intended to supersede. As experience is gained the system can also be extended to provinces not at present sufficiently developed for it. There will always be something real to offer as a reward of pure and successful administration.

§ 8. The duties of the new government are not likely to be long confined to those which may be transferred to it from amongst existing governmental activities. In course of time, and no doubt cautiously and gradually, it would be assigned duties and functions which the present administra-

progress as distinguished from those of personal advantage and privilege. The question of employing the Indian as the agent of government is entirely different from that of giving him a deciding voice in its policy. Questions of the former kind are continually being solved under the present theoretically autocratic government. Questions of the latter kind are still in a very elementary stage.

§ 6. A beginning has been made by allowing Indians to exercise an influence on the executive through the legislatures. But continued dependence on that method alone is subject to serious drawbacks. The present position of Indian members on the legislatures tends to develop their critical at the expense of their constructive faculties. They are not called upon to devise the means whereby the ends they demand may be compassed, and accordingly their sense of public responsibility goes undeveloped. In the second place the influence they have on the executives cannot be very greatly extended, without impairing the present efficiency of our Government, or even producing a deadlock. Such a deadlock could only be released either by a step backwards, which would be dangerous, or by making the executive responsible to the legislature and removable at its will. Legislators with no experience beyond that of criticizing an alien executive would be called on at one step to assume the whole of its functions.

§ 7. The principle of creating responsible Indian executives side by side with the existing executives in selected provinces, and of gradually transferring the functions of government from one to the other is suggested as a means of avoiding the dilemma. The existing executives will provide a standard of efficiency and purity in administration by which the Indian executives, legislatures, and electorates can judge their own, and be judged by us. In order to establish a convincing case for the further extension of their powers they will have to show that their own government compares not unfavourably with that which it is intended to supersede. As experience is gained the system can also be extended to provinces not at present sufficiently developed for it. There will always be something real to offer as a reward of pure and successful administration.

§ 8. The duties of the new government are not likely to be long confined to those which may be transferred to it from amongst existing governmental activities. In course of time, and no doubt cautiously and gradually, it would be assigned duties and functions which the present administra-

tion accepts very sparingly. The business of Indian Government is not a fixed and definite quantity but is capable of almost indefinite expansion. Not merely the necessity of economy, ever present as that is, prevents the Government of India from interfering in many matters which elsewhere would be regarded as proper objects of legislative and administrative action. An even more compelling reason is to be found in the pledges which it has given and the policy which it has faithfully observed of non-interference with everything connected with the religious beliefs and observances of its subjects. With the peoples of India religion is neither a veneer upon the surface nor a water-tight compartment of their existence but enters into every portion of its texture. There are, therefore, few matters of domestic legislation with which religion may not be represented as being in some way concerned, and fear of opposition based on religious grounds has inspired the Government of India with extreme caution in its attitude to many admitted social evils and abuses.

The point of view of a responsible Government would be very different; its heterogeneous composition would properly influence it in the direction of conservatism, but it would be in a position to test the reality of objections and need not be so easily deterred from necessary reform by the mere raising of the religious plea. That plea, indeed, so ready a weapon against the alien administrator, would be felt to be ridiculous when directed against members of the religion concerned. As the Government grew in the confidence of the public it might be expected to occupy itself more and more with social reforms and questions of personal status and property, and to direct its ambitions even more to these than to absorbing the remaining functions of the section under British control. Its success in this field would be the highest test of efficiency and of capacity for a fuller degree of autonomy.

§ 9. Lastly, responsible government will open to Indian legislators a rôle other than that of mere critics. The experience of finding the means whereby to attain the ends they advocate will thus be imposed on them, and a better knowledge of facts and a deeper sense of responsibility can scarcely fail to develop in the process. This, after all, is the necessary condition of any progress towards self-government.

LONDON, *April* 1916.

tion accepts very sparingly. The business of Indian Government is not a fixed and definite quantity but is capable of almost indefinite expansion. Not merely the necessity of economy, ever present as that is, prevents the Government of India from interfering in many matters which elsewhere would be regarded as proper objects of legislative and administrative action. An even more compelling reason is to be found in the pledges which it has given and the policy which it has faithfully observed of non-interference with everything connected with the religious beliefs and observances of its subjects. With the peoples of India religion is neither a veneer upon the surface nor a water-tight compartment of their existence but enters into every portion of its texture. There are, therefore, few matters of domestic legislation with which religion may not be represented as being in some way concerned, and fear of opposition based on religious grounds has inspired the Government of India with extreme caution in its attitude to many admitted social evils and abuses.

The point of view of a responsible Government would be very different; its heterogeneous composition would properly influence it in the direction of conservatism, but it would be in a position to test the reality of objections and need not be so easily deterred from necessary reform by the mere raising of the religious plea. That plea, indeed, so ready a weapon against the alien administrator, would be felt to be ridiculous when directed against members of the religion concerned. As the Government grew in the confidence of the public it might be expected to occupy itself more and more with social reforms and questions of personal status and property, and to direct its ambitions even more to these than to absorbing the remaining functions of the section under British control. A LETTER TO THE PEOPLE OF INDIA.

RAISINA, DELHI.

March 1917.

§ 1. In October 1916, I arrived in India with the object of making certain studies for submission to an informal organization of students known as the Round Table groups. My friends were expecting my return to England after the cold weather, but on November 13 I wrote to warn them that I should have to postpone my return, and gave reasons for this change in my plans. Presently I learned that a copy of this letter had gone astray, by means of which I have no knowledge. As a quite erroneous version of its contents was current, I instantly published the letter. But none the less it was referred to in public speeches and in countless newspaper articles as proving a charge of conspiracy, and even of criminal conspiracy, between public officials, the Round Table group, and myself. Conspiracy implies a concealment of facts. To all the pertinent facts the fullest publicity had been given by those against whom the charge was directed throughout the English-speaking world. Elsewhere a widespread knowledge of these facts would have rendered such charges harmless if made, and, indeed, impossible to make. That in India these published facts were so little known was not, I think, a matter for which any one was to blame. The obvious remedy is to restate them now in the fullest details in one paper accessible to every Indian who cares to read it.

There is, however, a further reason for adopting that course.

Suspensions have been roused which tend to obscure issues of vital importance to India. 'Suspensions are to knowledge as bats to birds—they fly by darkness.' The remedy for suspensions is the truth, and as the French say 'to know all is to forgive all'. I propose, therefore, as truthfully as a humanly fallible memory will allow me, to tell you the history of the *Round Table* and to detail the facts with regard to my letter; I will then ask you to consider those larger issues which, as I have said, are in some danger of being obscured by a controversy which I am sorry to have caused.

II

A LETTER TO THE PEOPLE OF INDIA.

RAISINA, DELHI,

March 1917.

§ 1. In October 1916, I arrived in India with the object of making certain studies for submission to an informal organization of students known as the Round Table groups. My friends were expecting my return to England after the cold weather, but on November 13 I wrote to warn them that I should have to postpone my return, and gave reasons for this change in my plans. Presently I learned that a copy of this letter had gone astray, by means of which I have no knowledge. As a quite erroneous version of its contents was current, I instantly published the letter. But none the less it was referred to in public speeches and in countless newspaper articles as proving a charge of conspiracy, and even of criminal conspiracy, between public officials, the Round Table group, and myself. Conspiracy implies a concealment of facts. To all the pertinent facts the fullest publicity had been given by those against whom the charge was directed throughout the English-speaking world. Elsewhere a widespread knowledge of these facts would have rendered such charges harmless if made, and, indeed, impossible to make. That in India these published facts were so little known was not, I think, a matter for which any one was to blame. The obvious remedy is to restate them now in the fullest details in one paper accessible to every Indian who cares to read it.

There is, however, a further reason for adopting that course.

Suspicious have been roused which tend to obscure issues of vital importance to India. 'Suspicious are to knowledge as bats to birds—they fly by darkness.' The remedy for suspicious is the truth, and as the French say 'to know all is to forgive all'. I propose, therefore, as truthfully as a humanly fallible memory will allow me, to tell you the history of the *Round Table* and to detail the facts with regard to my letter; I will then ask you to consider those larger issues which, as I have said, are in some danger of being obscured by a controversy which I am sorry to have caused.

§ 2. After the South African war ended with the Peace of Vereeniging in 1902, the Transvaal and Orange Free State were governed as Crown colonies on lines similar to those under which India is governed to-day. Several friends, of whom I was one, were official-employed under the Transvaal Government. We were Englishmen who had either fought in the war or had come to South Africa soon after it. A few years later Sir James Meston and Mr. Maris were borrowed from India to set the Civil Service in order, and this was how we came to know them.

In 1906 the British Government announced their intention of granting Responsible Government to the Transvaal and Orange River Colony. Most of us thought that this was the right thing to do; but we also thought that when it was done, the Governments of the Transvaal and Orange River Colony, but lately Republics, would soon find themselves in conflict with those of the Cape Colony and Natal. No one who has seen a civil war wants to see it again, and we believed that the only remedy to be found was by putting all four colonies under one National Government, responsible to the people of South Africa as a whole.

At this juncture it appeared to some of us that good might be done by getting members of both races to work together on a problem which had not as yet been dragged into the rules of racial politics. I therefore left the Government Service and set to work to collect groups in various parts of the country, known as Closer Union Societies, which included members of both races and of all parties. We then worked out in detail the case for South African Union and the materials for a new constitution, a task in which we received help from Mr. Maris. These documents were printed and submitted to the Closer Union Societies for criticism. They were then revised in the light of that criticism and finally published.

The experiment had one happy result in the better feeling engendered between a few members of two races, but lately at war with each other, who, for the first time, found themselves working together on a question of capital public importance. This better understanding between private individuals contributed to the realization of a project which many of those who best knew the country had deemed to be impossible. Government officials, Dutch and English, were authorized by General Botha to join the Closer Union Societies, so that those of my friends who remained in the public service were able to take their part in these studies.

§ 2. After the South African war ended with the Peace of Vereeniging in 1902, the Transvaal and Orange Free State were governed as Crown colonies on lines similar to those under which India is governed to-day. Several friends, of whom I was one, were officials employed under the Transvaal Government. We were Englishmen who had either fought in the war or had come to South Africa soon after it. A few years later Sir James Meston and Mr. Marris were borrowed from India to set the Civil Service in order, and this was how we came to know them.

In 1906 the British Government announced their intention of granting Responsible Government to the Transvaal and Orange River Colony. Most of us thought that this was the right thing to do; but we also thought that when it was done, the Governments of the Transvaal and Orange River Colony, but lately Republics, would soon find themselves in conflict with those of the Cape Colony and Natal. No one who has seen a civil war wants to see it again, and we believed that the only remedy to be found was by putting all four colonies under one National Government, responsible to the people of South Africa as a whole.

At this juncture it appeared to some of us that good might be done by getting members of both races to work together on a problem which had not as yet been dragged into the ruts of racial politics. I therefore left the Government Service and set to work to collect groups in various parts of the country, known as Closer Union Societies, which included members of both races and of all parties. We then worked out in detail the case for South African Union and the materials for a new constitution, a task in which we received help from Mr. Marris. These documents were printed and submitted to the Closer Union Societies for criticism. They were then revised in the light of that criticism and finally published.

The experiment had one happy result in the better feeling engendered between a few members of two races, but lately at war with each other, who, for the first time, found themselves working together on a question of capital public importance. This better understanding between private individuals contributed to the realization of a project which many of those who best knew the country had deemed to be impossible. Government officials, Dutch and English, were authorized by General Botha to join the Closer Union Societies, so that those of my friends who remained in the public service were able to take their part in these studies.

Their help was invaluable, because no one understands the structure of Government or can help others to understand it so well, as those who are actually working the machine.

While these studies were in progress, Responsible Government was introduced in the Transvaal and Orange River Colony. Elections were held, Boer majorities were returned, and Governments largely consisting of Boer generals, who had fought against us in the late war, came into power. We Englishmen thus found ourselves under the Government of a race which we had first fought and afterwards ruled. Perhaps we can realize better than most of our countrymen what it feels like to be governed by a race other than one's own. Now we all knew that if the four colonies were united under one Government, that Government would also be in the hands of the Boers. The Union of South Africa meant that not only the Transvaal and the Orange River Colony but also the British communities of the Cape Colony and Natal would be governed by Boer generals for a generation at least. And yet we faced that consequence, because we believed that we as Englishmen stood for the principle of Self-Government and that, even if we were in the minority, South Africa ought to manage her own affairs within the circle of the British Commonwealth. And so we argued to our fellow countrymen that we ought to help to establish a national Government in South Africa and obey it, even when its orders were contrary to our wishes and interests. This we felt it our duty to do because the British Parliament would scarcely have ratified so drastic a change had it been opposed by the united voice of the British minority in South Africa.

Still we were faced with one most difficult question. The danger of war with Germany was already in sight, and we had to consider what attitude the future Government of South Africa would take if the storm burst. General Botha we trusted; but we knew that it was more than possible that a man like General Beyers, who as events have proved was in actual collusion with the Germans, might be in power if and when the Germans attacked us. We believed that a Prime Minister like Beyers would proclaim that South Africa was to stand aside and remain neutral in any great struggle with the German powers. Thus when the Imperial Government was calling upon us as British subjects to fight, the South African Government we had helped to establish would be calling upon us to stand aside, and in such an event which of the two were we called upon to obey? The

1. *Journal of the American Medical Association*, 2000; 283: 2639-2645.

South African Government, moreover, would be able to say that the Imperial Government did not represent the people of South Africa and could not, therefore, commit them to war.

Here was the key to the false position in which we were placed. The Imperial Government held office by virtue of the votes which we, as British subjects in England, cast with the rest of our fellow countrymen. We had a voice, however small, in making and unmaking the Governments which decided the issues of peace and war. As British subjects in a self-governing Dominion we had no such voice, nor were we called upon to contribute taxes to the cost of defence. The greatest of all responsibilities, that of national life and death, no longer rested on us in South Africa. We were thus driven to ask ourselves whether a system which excluded us from the heaviest of all responsibilities, was Responsible Government in the true sense of the word.

Confronted by this dilemma at the very moment of attaining Dominion self-government, we thought it would be wise to ask people in the oldest and most experienced of all the Dominions what they thought of the matter. So in 1909 Mr. Kerr and I went to Canada and persuaded Mr. Marris, who was then on leave, to accompany us.

§ 3. I must here pause in this narrative to relate an episode which has some bearing on the present controversy. I remember discussing the Indian anarchist troubles with Mr. Marris, as we walked through a forest on the Pacific slopes, and his views so startled and arrested my attention as to make a lasting impression on my mind. Self-government, he urged, however far distant, was the only intelligible goal of British policy in India. It needed a guiding principle, and no other was thinkable. A despotic Government would have tried to withhold education or, at any rate, such as had any bearing on political progress. The British Government, on the other hand, actually encouraged political studies, prescribing standard books on the working of representative institutions. Political unrest was the inevitable product of such education. In a country containing such varied elements as India, political unrest was bound in certain directions to develop into anarchy, which must of course be suppressed, if only because disorder is the greatest impediment to progress towards self-government. But the existence of political unrest in India, so far from being a reason for pessimism, was the surest sign that the British, with all their manifest failings, had not shirked

Here was the key to the false position in which we were placed. The Imperial Government held office by virtue of the votes which we, as British subjects in England, cast with the rest of our fellow countrymen. We had a voice, however small, in making and unmaking the Governments which decided the issues of peace and war. As British subjects in a self-governing Dominion we had no such voice, nor were we called upon to contribute taxes to the cost of defence. The greatest of all responsibilities, that of national life and death, no longer rested on us in South Africa. We were thus driven to ask ourselves whether a system which excluded us from the heaviest of all responsibilities, was Responsible Government in the true sense of the word.

Confronted by this dilemma at the very moment of attaining Dominion self-government, we thought it would be wise to ask people in the oldest and most experienced of all the Dominions what they thought of the matter. So in 1909 Mr. Keir and I went to Canada and persuaded Mr. Marrie, who was then on leave, to accompany us.

§ 3. I must here pause in this narrative to relate an episode which has some bearing on the present controversy. I remember discussing the Indian anarchist troubles with Mr. Marrie, as we walked through a forest on the Pacific slopes, and his views so startled and arrested my attention as to make a lasting impression on my mind. Self-government, he urged, however far distant, was the only intelligible goal of British policy in India. It needed a guiding principle, and no other was thinkable. A despotic Government would have tried to withhold education or, at any rate, such as had any bearing on political progress. The British Government, on the other hand, actually encouraged political studies, prescribing standard books on the working of representative institutions. Political unrest was the inevitable product of such education. In a country containing such varied elements as India, political unrest was bound in certain directions to develop into anarchy, which must of course be suppressed, if only because disorder is the greatest impediment to progress towards self-government. But the existence of political unrest in India, so far from being a reason for pessimism, was the surest sign that the British, with all their manifest failings, had not shirked

their primary duty of extending western education to India, and so preparing Indians to govern themselves.

I have since looked back to this walk as one of the milestones in my own education. So far I had thought of self-government as a Western institution, which was and would always remain peculiar to the peoples of Europe, just as a Hindu thinks of Hinduism as a religion to which a man must be born. It was from that moment that I first began to think of 'the Government of each by each, and of all by all' not merely as a principle of western life, but rather of all human life, as the goal to which all human societies must tend. It was from that moment that I began to think of the British Commonwealth as the greatest instrument ever devised for enabling that principle to be realized, not merely for the children of Europe but for all races and kindreds and peoples and tongues. And it is for that reason that I have ceased to speak of the British Empire and called the book in which I published my views, *The Commonwealth of Nations*.

§ 4. Let us now return to the thread of my narrative. We three spent four months in Canada, often following different routes and making a number of friends. I then returned to South Africa for the closing session of the Transvaal Legislative Council, of which I was a member, and there drafted a memorandum on the whole question. The result satisfied us that we were confronted by a problem too large and too difficult for a handful of friends in South Africa to solve for themselves. So in 1910 on the appointed day when the Union of South Africa came into being, I sailed for New Zealand. There I discussed the document with men connected with the Universities and in private business. It was finally decided that student groups should be formed at University centres to study the memorandum, which for that purpose, was printed with blank sheets opposite the text. We agreed that the groups should include men of all parties and Government officials, but not, unless in exceptional circumstances, journalists and politicians, for the reason that such men were committed to political programmes. Our object was to arrive at conclusions by which each man could regulate his own political conduct for himself. Each student was to note his criticism on the blank pages opposite the text. They were then to meet in their groups and discuss these criticisms with a view to framing joint reports, or, failing that, majority and minority reports or reports coupled with minutes of dissent. These collective and individual criticisms were to be sent to me,

their primary duty of extending western education to India, and so preparing Indians to govern themselves.

I have since looked back to this walk as one of the milestones in my own education. So far I had thought of self-government as a Western institution, which was and would always remain peculiar to the peoples of Europe, just as a Hindu thinks of Hinduism as a religion to which a man must be born. It was finally decided that student groups should be formed at University centres to study the memorandum, which for that purpose, was printed with blank sheets opposite the text. We agreed that the groups should include men of all parties and Government officials, but not, unless in exceptional circumstances, journalists and politicians, for the reason that such men were committed to political programmes. Our object was to arrive at conclusions by which each man could regulate his own political conduct for himself. Each student was to note his criticism on the blank pages opposite the text. They were then to meet in their groups and discuss these criticisms with a view to framing joint reports, or, failing that, majority and minority reports or reports coupled with minutes of dissent. These collective and individual criticisms were to be sent to me,

in the light of which I was to compile a comprehensive report on the whole Imperial Problem for submission to the groups, with a view to seeing whether any agreement could be reached. It was further decided to obtain the co-operation of similar groups in Canada and England and to start a quarterly journal, called the *Round Table*, which was to contain information on Imperial affairs and articles from the various countries included in the British Commonwealth, for the mutual information of the student groups. Its object was to promote a common interest and not to inculcate any definite doctrines. The constitution of at least one English group and the editing of the Magazine was entrusted to Mr. Kerr. The journal was to be published. Otherwise our studies were to be private, until they had yielded results which were worth publication. Obviously such studies could not be conducted in an atmosphere of newspaper criticism.

§ 5. Five of such groups were established in New Zealand, and five more at University centres in Australia. In accordance with the expressed wish of these groups, I next proceeded to Canada, and there formed several groups in University towns. Thence I returned to England, where groups were subsequently formed at Oxford, Cambridge, Edinburgh, Glasgow, Leeds, and Birmingham, as well as in London.

Early in 1911 the individual and collective criticism of the groups began to arrive. Before the close of the year I printed all that had reached me in a large volume with an analytical index containing, I think, some 700 pages. No names were printed, but only numbers indicating the country to which the critics belonged. In the case of memoranda agreed upon by the groups, the location of the group was named. There were two reasons for this practice. In the first place it was thought desirable that each student should feel the utmost freedom in expressing his views. In the second place it was desired that the opinion of each student should be considered by all the others on its merits and without reference to the authority which any particular name might carry.

So far as I can remember more than one thousand copies of this volume were printed. The copies were distributed to the groups and were also given freely to any one who asked for them. The volume has never been published, but obviously there can be no element of secrecy with regard to a document at least one thousand copies of which were

§ 5. Five of such groups were established in New Zealand, and five more at University centres in Australia. In accordance with the expressed wish of these groups, I next proceeded to Canada, and there formed several groups in University towns. Thence I returned to England, where groups were subsequently formed at Oxford, Cambridge, Edinburgh, Glasgow, Leeds, and Birmingham, as well as in London.

Early in 1911 the individual and collective criticism of the groups began to arrive. Before the close of the year I printed all that had reached me in a large volume with an analytical index containing, I think, some 700 pages. No names were printed, but only numbers indicating the country to which the critics belonged. In the case of memoranda agreed upon by the groups, the location of the group was named. There were two reasons for this practice. In the first place it was thought desirable that each student should feel the utmost freedom in expressing his views. In the second place it was desired that the opinion of each student should be considered by all the others on its merits and without reference to the authority which any particular name might carry.

So far as I can remember more than one thousand copies of this volume were printed. The copies were distributed to the groups and were also given freely to any one who asked for them. The volume has never been published, but obviously there can be no element of secrecy with regard to a document at least one thousand copies of which were

freely distributed to any studiously-minded person who desired to obtain one. Two years later a second volume, containing further memoranda from the groups and individual students, was circulated in the same way.

These volumes revealed the widest possible divergence of opinion amongst the various students engaged. In the light of this material I began to draft a report on the whole problem. Sections of the draft were printed as soon as they were written, and were circulated for criticism amongst the groups.

The subsequent creation of an Indian group at Agra illustrates the spontaneous and informal manner in which this student movement has spread. During the war three members of the Oxford group, one an Indian, the other two officers in a Territorial regiment, found themselves at Agra. The Indian friend suggested the formation of a Round Table group for the purpose of studying the problem of Imperial reconstruction after the war. Several local officials were included, and I myself never heard of its existence until it was actually constituted and at work. The system meets the needs of those who feel that in these times of political transition private study and mutual discussion are essential to those who would properly discharge their duty as citizens. It will be harder for Indians to play their part in the coming reconstruction unless some such methods of study are first promoted amongst the educated classes.

§ 6. In Canada, meanwhile, the inquiry had excited such interest in University circles, that the groups each threatened to expand beyond a manageable size. The original groups, therefore, proposed the institution of new groups. I was faced by the difficulty, however, that the existing groups were sending in more documents than I could well digest. I stipulated therefore that I should not be expected to read the documents of any further groups, and on this understanding a large number of new groups were brought into existence for the purpose of study and self-education. They have been supplied with all the proceedings of the organization. Thus two classes of groups have come into existence.

(1) The original groups formed for the purpose of collaboration in the inquiry.

(2) Additional groups formed merely for discussion and self-education on the Imperial Problem.

In 1913 I went to Canada to discuss the development of the inquiry in the light of the experience we had gained, and summarized the results in an address delivered in

freely distributed to any studiously-minded person who desired to obtain one. Two years later a second volume, containing further memoranda from the groups and individual students, was circulated in the same way.

These volumes revealed the widest possible divergence of opinion amongst the various students engaged. In the light of this material I began to draft a report on the whole problem. Sections of the draft were printed as soon as they were written, and were circulated for criticism amongst the groups.

The subsequent creation of an Indian group at Agra illustrates the spontaneous and informal manner in which this student movement has spread. During the war three members of the Oxford group, one an Indian, the other two officers in a Territorial regiment, found themselves at Agra. The Indian friend suggested the formation of a Round Table group for the purpose of studying the problem of Imperial reconstruction after the war. Several local officials were included, and I myself never heard of its existence until it was actually constituted and at work. The system meets the needs of those who feel that in these times of political transition private study and mutual discussion are essential to those who would properly discharge their duty as citizens. It will be harder for Indians to play their part in the coming reconstruction unless some such methods of study are first promoted amongst the educated classes.

§ 6. In Canada, meanwhile, the inquiry had excited such interest in University circles, that the groups each threatened to expand beyond a manageable size. The original groups, therefore, proposed the institution of new groups. I was faced by the difficulty, however, that the existing groups were sending in more documents than I could well digest. I stipulated therefore that I should not be expected to read the documents of any further groups, and on this understanding a large number of new groups were brought into existence for the purpose of study and self-education. They have been supplied with all the proceedings of the organization. Thus two classes of groups have come into existence.

(1) The original groups formed for the purpose of collaboration in the inquiry.

(2) Additional groups formed merely for discussion and self-education on the Imperial Problem.

In 1913 I went to Canada to discuss the development of the inquiry in the light of the experience we had gained, and summarized the results in an address delivered in

October to the Toronto groups. The various solutions revealed by the divergent opinions of members could all, as I pointed out, be grouped under four headings—

(1) There were those who preferred that things should remain as they were.

(2) There were those who saw no solution but a declaration of Independence by the Dominions.

(3) There were those who believed that the unity of the Empire could be maintained by the separate and independent co-operation in foreign affairs of the several Governments of the Empire.

(4) Lastly, there were those who believed that self-government could only be realized within the limits of the Commonwealth by reducing the United Kingdom to the status of a Dominion, and by relieving the Imperial Government of all responsibility for the domestic affairs of the British Isles, thus making it possible for the other communities of the Empire to be represented on the Imperial Government.

This last, I said, was the conclusion to which my own report would lead. I therefore urged that the other three views should be expounded in reports drawn up by the students who believed in them, for obviously I could not undertake to make the best possible case for a view which I did not hold. I then urged that the results of the inquiry could best be produced in the form of four reports instead of only one, thus leaving the public to draw its own conclusions after reading the best that could be said for each view by those who believed in it. On this and on other occasions I was at special pains to deprecate any tendency on the part of Round Table groups to drift into propaganda. It has happened that members of groups after years of study together have found themselves in substantial agreement. I have always taken the position that each individual is free to advocate the views he holds, and also that individuals are free to combine for advocacy in any new organization, with a separate name of its own adopted for the purpose. But I have urged, and so far always with success, that the primary object of the Round Table groups would be lost if they ceased to consist of men who differ and are combined only for the purpose of study. A motion in favour of Imperial Union proposed at a meeting of delegates from the Australian groups in Melbourne last August, was negatived on this ground, although a majority, I think, believed in the ideal it embodied. I could not, of course, prevent

THE EFFECT OF THE DIET ON THE BLOOD SUGAR IN THE NORMAL INDIVIDUAL AND IN THE DIABETIC
The effect of the diet on the blood sugar in the normal individual and in the diabetic is a subject of great importance to the physician. It is one of the most common causes of the disease and one of the most common causes of the complications. It is one of the most common causes of the disease and one of the most common causes of the complications.

October to the Toronto groups. The various solutions revealed by the divergent opinions of members could all, as I pointed out, be grouped under four headings—

(1) There were those who preferred that things should remain as they were.

(2) There were those who saw no solution but a declaration of Independence by the Dominions.

(3) There were those who believed that the unity of the Empire could be maintained by the separate and independent co-operation in foreign affairs of the several Governments of the Empire.

(4) Lastly, there were those who believed that self-government could only be realized within the limits of the Commonwealth by reducing the United Kingdom to the status of a Dominion, and by relieving the Imperial Government of all responsibility for the domestic affairs of the British Isles, thus making it possible for the other communities of the Empire to be represented on the Imperial Government.

This last, I said, was the conclusion to which my own report would lead. I therefore urged that the other three views should be expounded in reports drawn up by the students who believed in them, for obviously I could not undertake to make the best possible case for a view which I did not hold. I then urged that the results of the inquiry could best be produced in the form of four reports instead of only one, thus leaving the public to draw its own conclusions after reading the best that could be said for each view by those who believed in it. On this and on other occasions I was at special pains to deprecate any tendency on the part of Round Table groups to drift into propaganda. It has happened that members of groups after years of study together have found themselves in substantial agreement. I have always taken the position that each individual is free to advocate the views he holds, and also that individuals are free to combine for advocacy in any new organization, with a separate name of its own adopted for the purpose. But I have urged, and so far always with success, that the primary object of the Round Table groups would be lost if they ceased to consist of men who differ and are combined only for the purpose of study. A motion in favour of Imperial Union proposed at a meeting of delegates from the Australian groups in Melbourne last August, was negatived on this ground, although a majority, I think, believed in the ideal it embodied. I could not, of course, prevent

a group carrying such a motion. The movement is largely a spontaneous growth ; it has no rules and no constitution, and for that very reason it is not possible for any member to declare that this or that is a tenet of the Round Table organization. It is merely a system for enabling people to unite for the study of their duties as citizens of this Commonwealth, as a guide to their own individual action. Lacking definite tenets, it naturally lacks the mechanism of a political organization.

More than a thousand copies of the address delivered at Toronto were printed and circulated to the Round Table groups.

When war broke out in August 1914 I had circulated four instalments of my report and had received a mass of valuable criticism thereon. A number of my colleagues then pointed out to me that the report would take some years to complete, while, if the British Commonwealth survived the struggle with Germany, the problem we were examining would be raised in its acutest form at the close of the war. They therefore asked me to put my practical conclusions in a short popular volume which would be ready for production whenever the crisis came. I agreed, subject to the understanding that in such a volume I could only deal with the self-governing communities, because I had as yet made no sufficient study of India.

§ 7. I then revised the four instalments in the light of the criticisms made on them, wrote a final chapter, and reprinted the whole in one volume which was privately circulated amongst the Round Table groups under the title of *The Project of a Commonwealth*.

Then I made the first draft of the popular volume since published under the title of *The Problem of the Commonwealth*. It was printed and privately circulated in the usual way. A mass of criticism was sent in, much of which was destructive. But a general consensus of opinion was expressed that I should revise and publish it at once on my own authority, in order that the public might have time to think over the issues involved before peace came and the crisis was upon us. It was also urged that I should publish it over my own name in order to preserve the student character of the Round Table groups. Hitherto there had been no secret as to the authorship of various books I had printed ; but I had never been in the habit of putting my name on the title-page, because the question of authorship seemed so irrelevant to the value of the matter

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in financial matters. The text outlines various methods for collecting and organizing data, ensuring that all relevant information is captured and stored systematically.

2. The second section focuses on the analysis and interpretation of the collected data. It describes how to identify trends, patterns, and anomalies within the dataset. This involves using statistical tools and techniques to draw meaningful conclusions from the raw data. The importance of context is highlighted, as the same data can have different implications depending on the circumstances and the questions being asked.

3. The third part of the document addresses the communication of findings. It stresses the need to present the results in a clear, concise, and accessible manner. This includes the use of visual aids such as charts, graphs, and tables to enhance the understanding of complex data. The text also discusses the importance of tailoring the communication to the intended audience, ensuring that the information is relevant and useful to them.

4. The final section discusses the ongoing nature of the process. It notes that data collection and analysis are not one-time events but rather continuous activities that require regular updates and revisions. The document encourages a culture of continuous improvement, where feedback is sought and used to refine the processes and methods. It also highlights the importance of staying current with the latest developments in data management and analysis.

contained in the book. Now, however, as there was a good reason for signing the book, I decided to do so in order to make it clear once for all that no one but myself must be taken as responsible for the views I expressed. I therefore revised the whole book from the point of view that I must be prepared to defend every line and was at liberty to say things which I had previously omitted on the ground that they were contentious.¹

The Problem of the Commonwealth was published over my name in May 1916, and the publication of the earlier book was promised in the preface. Some 1,000 copies had been circulated to the Round Table groups under the title of *The Project of a Commonwealth*. The publishers thought that this title was so like that of the smaller book already published, *The Problem of the Commonwealth*, that it would lead to confusion, so I changed the title to *The Commonwealth of Nations* and added a preface, a copy of which you will find at the end of this letter. The larger book, *The Commonwealth of Nations*, was then published about July 1916. The publication was followed by an article in the September issue of the *Round Table* magazine, written four months after I had left England. I never saw it till October last, and I have printed the first three pages at the end of this letter in order that you may see how clearly the relation of the student groups to this book was explained. I think you will agree that a charge of conspiracy can scarcely be sustained against men who publish their proceedings in documents like this.

It was so difficult to obtain paper in England that, in April, I left for Canada and Australasia to arrange for the reprinting of the *Problem of the Commonwealth* in those countries. In Australia the book was reprinted under a local 'foreword' which I will here quote in full. The signatures are important, because they include the names of two Judges and one prominent Government official. In Australia and New Zealand, the traditions of the bench are as high as in England or India, and the association of their names is in itself a sufficient disproof of the charges which have here been brought against the *Round Table* and the author of this book.

¹ In the pamphlet as originally issued the preface of *The Problem of the Commonwealth* was printed in the text. As stated in the next paragraph the preface to *The Commonwealth of Nations* was printed as an appendix. As both are accessible for reference by English readers they are omitted here.

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

2. Next, it is important to gather relevant information and data. This can be done through research, consultation with experts, or by analyzing existing data sets.

3. Once the information is gathered, the next step is to develop a plan or strategy to solve the problem. This plan should outline the steps to be taken and the resources needed.

4. After the plan is developed, it is time to implement the solution. This involves carrying out the steps outlined in the plan and monitoring progress along the way.

5. Finally, it is important to evaluate the results of the solution. This involves comparing the actual outcomes with the expected results and identifying any areas for improvement.

FOREWORD

IN heartily recommending this book to the attention of Australasian readers, we do so without necessarily identifying ourselves either with its conclusions or with the arguments by which they have been reached. The issues raised, however, are of such vital importance to the future of the self-governing Dominions that they should be thoroughly understood and carefully considered. As Lord Cromer has said with regard to this book:¹ 'Mr. Curtis, in the preface to his work, invites political leaders to suspend their judgement, and not to commit themselves or their followers definitely in either sense. This advice will almost certainly be followed. No request could be more reasonable. All that can be done at present is to await events, to summon a Conference at the close of the war in order to discuss all the issues involved, to invite all concerned to formulate their proposals, and to resolve to approach the whole subject in highly sympathetic spirit and without undue adherence to preconceived notions based on arguments some of which have fallen into desuetude.'

We venture to endorse Lord Cromer's words, and would urge that while the war is in progress, the subject be studied as widely as possible and without reference to existing party divisions.

EDMUND BARTON.

G. H. KNIBBS.

J. T. WILSON.

W. M. MACCALLUM.

J. H. HOSKING.

J. C. WATSON.

W. HARRISON MOORE.

H. Y. BRADDON.

In accordance with the spirit of this foreword, a movement was started in Canada, Australia, and New Zealand to organize further groups to study the question during the war. Particular stress was laid on the point that these groups should include men of all opinions. The whole object of a Round Table group is to bring together students who differ. Discussions between men who begin by agreeing are unlikely to lead to new and fruitful results.

§ 8. In the preface to *The Problem of the Commonwealth* it is stated that 'no attempt will be made within the compass of this short report to discuss in detail the position of India and the great Dependencies of the Commonwealth. An adequate treatment of this important subject must be left to the main report, which is still in progress.'

When this inquiry began our minds were fixed upon our own positions as British subjects domiciled in self-governing Dominions. Personally I had begun to realize, however faintly, the enormous importance of India as a factor in the problem. But I then believed that the mutual relations

of the countries already endowed with self-government would have to be determined as a preliminary to a final adjustment of their relations with India. That view is reflected on p. 16 of *The Commonwealth of Nations* which was written at least five years ago. If, when I return to England, that volume is reprinted I shall add a footnote to the effect that I no longer hold that opinion. This is by no means the first time that further study has changed my views. A political student who cannot change his opinion, or is afraid to confess such change is obviously unfit for the task he has undertaken.

It was the circulation of these earlier chapters in 1912 which led Sir James Meston and Mr. Marris to urge upon us once more the vital importance of India as a factor in the problem we were studying. Their representations led to an informal meeting at a country house in England (I think in 1913) of various people interested in the subject for the purpose of discussing its bearing on India. The meeting lasted several days and was attended by various Indian officials including Mr. Marris and Sir James Meston, who endorsed the views which Mr. Marris had urged in 1909. After his return to India Sir James reopened the matter by letter. He urged that most of the standard books on India, by Strachey and others, were out of date. In the last twenty years, he said, political thought in India had been moving at a pace unexampled in its previous history. He warned me against the danger of attempting to study India at a distance, and advised that I should visit the country for the purpose of hearing what Indians, and especially the Nationalists themselves, had to say on the subject. With that purpose in view he invited me to India and offered me the hospitality of his house. I must also add that in these letters he persistently advocated the representation of India on the Imperial Conference and at any future convention which might be arranged to consider the question of Imperial reconstruction.

§ 9. In response to Sir James Meston's invitation I reached India at the end of last October as a passenger from Australia on the ill-fated *Arabia*. On the ship before landing I received a communication from a responsible official of the Bombay Government asking me to see him. I did so and was furnished with a copy of a public lecture on my books delivered by an Indian and with copies of speeches by leaders of the Home Rule movement touching on the same subject. I consider the action of the Bombay Government

most proper, and I mention the fact here as it is typical of my relations with the various governments in India. I have since asked governments to furnish me with copies of speeches and newspaper articles relating to the matter upon which I am engaged. I have asked the Home Department to obtain and supply me with an estimate of the total number of voters of all kinds in India. I cannot recall any other instance in which I have asked for papers which had not been published.

At Bombay I stayed with the Editor of *The Times of India*. I then went to Viceregal Lodge at Delhi in response to an invitation received and accepted in Australia, where I had first met Lord Chelmsford six years before. Then, as Sir James Meston was unable to receive me till November 11, I went to Simla to see Sir Valentine Chirol. The reason for his being in India is well known and has no connexion whatever with my presence here. He was an old friend whom I wanted to see, and as one who has a large acquaintance with all parts of India, his advice as to my future movements was of special value to a student who was new to the country. He accompanied me to Allahabad where we stayed with Sir James Meston. Mr. Marris was camped in the neighbourhood.

I had given my colleagues on the various Round Table groups to understand that I should devote myself during the cold weather to collecting opinions, information, and material, returning to England in the spring to work them into shape. As to the places I should visit and as to the persons I should see in India during these six months, I had written to Sir James Meston that I should make no definite plans until I had seen him and Mr. Marris. During the three weeks between my landing and arrival at Allahabad I came to the conclusion that the task I had undertaken here was so formidable that I could not hope to do justice to it if I left in the spring. I felt that I must write the first draft of what I was going to say in India itself in order to discuss it with men on the spot. The importance of warning my colleagues not to expect my return to England in the spring was the consideration which overshadowed all others in my mind.

§ 10. Sir James Meston was intensely busy, but he devoted an hour at once to discussing this question with Mr. Marris, Sir Valentine Chirol, and myself, and in helping me to frame a programme of my movements. They all agreed emphatically that I should remain in India during the summer to

§ 10. Sir James Meston was intensely busy, but he devoted an hour at once to discussing this question with Mr. Marris, Sir Valentine Chirol, and myself, and in helping me to frame a programme of my movements. They all agreed emphatically that I should remain in India during the summer to

write. I then sat down to prepare a letter to my colleague, Mr. Kerr, explaining my change of plans. As everything which followed hinges on this letter I shall here insert it in full.

PRIVATE.]

LIEUTENANT-GOVERNOR'S CAMP,
UNITED PROVINCES, INDIA,
The 13th November 1916.

DEAR KERR,

I found a copy of your letter to Marris awaiting me on arrival here. Meanwhile the mass of letters to numerous correspondents which I wrote on the *Arabia* between Adelaide and Bombay, the accumulated arrears of months, are now at the bottom of the sea. My report on the Australian visit for circulation amongst the groups I fortunately reserved for printing at Bombay. Before this reaches you several hundred copies for general circulation should have reached you from the office of Sir Stanley Reed who kindly arranged the printing on his own machines. This report was supplemented by four holograph letters. Fortunately I retained copies of three of them which I am sending. For the rest I will ask my friends and correspondents to realize that, having devoted the voyage to discharging all my arrears of correspondence, the letters I wrote them are irretrievably lost and could not now be re-written without sacrificing time which I have no right to divert from the work in hand here.

After six days with Sir Stanley Reed, the editor of the *Times of India* at Bombay, I visited Lord Chelmsford at Delhi, joining Chirol at Simla on November 4, where I stayed with Mr. Claude Hill, Member of the Viceroy's Executive Council, and had long talks with him and several of his colleagues. I was also able to digest a mass of interesting documents furnished to me at Bombay, Delhi, and Simla, and to discuss things generally with members of the Indian and Provincial Governments who have treated me with the utmost kindness and freedom.

On arriving here on November 11, I was able to sit down with Meston, Marris, and Chirol to survey the task before me and to outline a plan for tackling it. This letter, which has been revised in detail by them, may be taken as representing our joint view.

Let me briefly survey the position as I see it. Under the auspices of the Round Table we have published two volumes, arguing that the British Commonwealth is necessary not merely to itself but to civilization as we conceive it, that it cannot be now saved by force of arms alone, and must still perish unless British subjects in the self-governing Dominions assume in time the same responsibility for matters common to the whole Empire as now rests upon British subjects in the United Kingdom. These volumes have received

write. I then sat down to prepare a letter to my colleague, Mr. Kerr, explaining my change of plans. As everything which followed hinges on this letter I shall here insert it in full.

PRIVATE.]

LIEUTENANT-GOVERNOR'S CAMP,
UNITED PROVINCES, INDIA,
The 13th November 1916.

DEAR KERR,

I found a copy of your letter to Marris awaiting me on arrival here. Meanwhile the mass of letters to numerous correspondents which I wrote on the *Arabia* between Adelaide and Bombay, the accumulated arrears of months, are now at the bottom of the sea. My report on the Australian visit for circulation amongst the groups I fortunately reserved for printing at Bombay. Before this reaches you several hundred copies for general circulation should have reached you from the office of Sir Stanley Reed who kindly arranged the printing on his own machines. This report was supplemented by four holograph letters. Fortunately I retained copies of three of them which I am sending. For the rest I will ask my friends and correspondents to realize that, having devoted the voyage to discharging all my arrears of correspondence, the letters I wrote them are irretrievably lost and could not now be re-written without sacrificing time which I have no right to divert from the work in hand here.

After six days with Sir Stanley Reed, the editor of the *Times of India* at Bombay, I visited Lord Chelmsford at Delhi, joining Chirol at Simla on November 4, where I stayed with Mr. Claude Hill, Member of the Viceroy's Executive Council, and had long talks with him and several of his colleagues. I was also able to digest a mass of interesting documents furnished to me at Bombay, Delhi, and Simla, and to discuss things generally with members of the Indian and Provincial Governments who have treated me with the utmost kindness and freedom.

On arriving here on November 11, I was able to sit down with Meston, Marris, and Chirol to survey the task before me and to outline a plan for tackling it. This letter, which has been revised in detail by them, may be taken as representing our joint view.

Let me briefly survey the position as I see it. Under the auspices of the Round Table we have published two volumes, arguing that the British Commonwealth is necessary not merely to itself but to civilization as we conceive it, that it cannot be now saved by force of arms alone, and must still perish unless British subjects in the self-governing Dominions assume in time the same responsibility for matters common to the whole Empire as now rests upon British subjects in the United Kingdom. These volumes have received

considerable attention not only in the United Kingdom but in all the Dominions, three of which I have just visited. I have before me several hundred reviews of the books gathered from all these countries. I have addressed and have been publicly questioned at numerous meetings. I have discussed the matter with persons innumerable. The general verdict so obtained is that the case we have made is hard to answer and largely convincing. But all this is subject to the question specifically left unanswered in chapter XIX of 'the Problem' 'How is India to be worked into the settlement which ought to follow the war?'

The position is well illustrated in the 'red page' of the *Sydney Bulletin* of September 28, my last copy of which I attach. Should this copy also perish in transit you could probably obtain a copy at the Colonial Institute.

The position thus is that thousands of readers, whose number daily increases and will presently include all the more thoughtful minds in the British Commonwealth, are expecting a volume in which we undertake to treat this the thorniest and most delicate aspect of the whole problem. Whatever we say will be properly subject to a searching fire of criticism. But what weighs with me even more is this. We have obtained the confidence of a large number of readers for the simple reason that people are impressed by the fact that a real problem was foreseen and no time nor pains were spared in our attempt to define its limits and work the solution out. Seeley's results were necessarily limited by his lack of any knowledge at first hand either of the Dominions or of India. With the Round Table organization behind him Seeley by his own knowledge and insight might have gone further than us. If we have been able to go further than him it is not merely that we followed in his train, but also because we have so far based our study of the relations of these countries on a preliminary field-study of the countries concerned, conducted in close co-operation with people in those countries. We have thus gained the confidence of a large number of readers who having no opportunity of checking our facts and observations will take them more or less at face value. Thus we have established a kind of credit which may now be either used or abused. Owing to the character and the magnitude of the audience we now address all over the world, we can do more than any one else outside official circles to indicate a practical path through the crisis before us provided our work is based on sufficient first-hand knowledge. Without such knowledge we stand to do more mischief than any one else.

The question, an answer to which I am here to formulate, is a simple one. We are convinced (and have now convinced many others) that the British Commonwealth cannot survive unless its supreme responsibilities are shared by British subjects in the self-governing Dominions on an equal footing with those in the United Kingdom. To secure that end, the mechanism of the Imperial Government must be revised and enlarged so as to admit the people of the Dominions.

Abstract

Abstract

considerable attention not only in the United Kingdom but in all the Dominions, three of which I have just visited. I have before me several hundred reviews of the books gathered from all these countries. I have addressed and have been publicly questioned at numerous meetings. I have discussed the matter with persons innumerable. The general verdict so obtained is that the case we have made is hard to answer and largely convincing. But all this is subject to the question specifically left unanswered in chapter XIX of 'the Problem' 'How is India to be worked into the settlement which ought to follow the war?'

The position is well illustrated in the 'red page' of the *Sydney Bulletin* of September 28, my last copy of which I attach. Should this copy also perish in transit you could probably obtain a copy at the Colonial Institute.

The position thus is that thousands of readers, whose number daily increases and will presently include all the more thoughtful minds in the British Commonwealth, are expecting a volume in which we undertake to treat this the thorniest and most delicate aspect of the whole problem. Whatever we say will be properly subject to a searching fire of criticism. But what weighs with me even more is this. We have obtained the confidence of a large number of readers for the simple reason that people are impressed by the fact that a real problem was foreseen and no time nor pains were spared in our attempt to define its limits and work the solution out. Seeley's results were necessarily limited by his lack of any knowledge at first hand either of the Dominions or of India. With the Round Table organization behind him Seeley by his own knowledge and insight might have gone further than us. If we have been able to go further than him it is not merely that we followed in his train, but also because we have so far based our study of the relations of these countries on a preliminary field-study of the countries concerned, conducted in close co-operation with people in those countries. We have thus gained the confidence of a large number of readers who having no opportunity of checking our facts and observations will take them more or less at face value. Thus we have established a kind of credit which may now be either used or abused. Owing to the character and the magnitude of the audience we now address all over the world, we can do more than any one else outside official circles to indicate a practical path through the crisis before us provided our work is based on sufficient first-hand knowledge. Without such knowledge we stand to do more mischief than any one else.

The question, an answer to which I am here to formulate, is a simple one. We are convinced (and have now convinced many others) that the British Commonwealth cannot survive unless its supreme responsibilities are shared by British subjects in the self-governing Dominions on an equal footing with those in the United Kingdom. To secure that end, the mechanism of the Imperial Government must be revised and enlarged so as to admit the people of the Dominions.

Thereby the people of the Dominions will assume control of the future and fate of the 370,000,000 of people in the Commonwealth who have not as yet attained to self-government. Yet to lump these 370,000,000 into one class is to ignore facts. The people of Central Africa are scarcely capable of forming any valid opinion as to how they ought to be governed. There the task of rulers is to study their natural history and, so far as may be, their spiritual history, and provide them with the best government we can in the light of that study. We can scarcely invite their opinion for the reason that they themselves cannot formulate any opinion. With the people of India it is otherwise. This vast varied and closely congested community contains small but important sections who can and do formulate opinions on political questions. The opinion of these sections cannot be accepted as the final criterion of Indian policy if only because the sections in question are relatively too small. If the responsibility of final decision were committed to the sections capable of forming an opinion, they could not discharge it. They could not themselves enforce their decisions on the overwhelming majority who would overpower them, and we cannot enforce political decisions which are not ours. Indian opinion cannot rule India, at any rate until the Indians capable of forming such opinion are united, organized, and numerous enough to exact regular, willing, and continuous obedience from their fellow countrymen who have not as yet acquired the faculty of political judgement. This would be so if Indian opinion were really as sound and disinterested as our own now is, with all its conspicuous failures. Certainly it is not. It has to improve in quality as well as in quantity, and it must be the first business of our Government to improve both. But still Indian opinion there is, in a sense in which there is no political opinion in Central Africa. And the fact is rightly recognized. Broadly speaking, Government is at pains to recognize such opinion as there is. It accepts it where it can, often when it thinks that Nationalist opinion is not the best, ignoring it only where it appears so unsound that to accept and act upon it would lead to disaster. The policy of the British Government is to develop that opinion and to allow it to influence policy more and more. The responsibility of final decision it still reserves to itself. But it now looks to a time, however remote, when it will be able to transfer that responsibility to a section of Indians sufficiently large, disinterested, and capable of sound political judgement to assume it.

That in the faintest outline is the position in India as I see it, and that is how it differs from the position in Central Africa.

Now consider the bearings of all this on the problem before us. Our new and reformed Imperial Government must control India and Central Africa—

- (a) in their domestic affairs,
- (b) in their external affairs.

The domestic affairs (a) of these two groups are already controlled

Thereby the people of the Dominions will assume control of the future and fate of the 370,000,000 of people in the Commonwealth who have not as yet attained to self-government. Yet to lump these 370,000,000 into one class is to ignore facts. The people of Central Africa are scarcely capable of forming any valid opinion as to how they ought to be governed. There the task of rulers is to study their natural history and, so far as may be, their spiritual history, and provide them with the best government we can in the light of that study. We can scarcely invite their opinion for the reason that they themselves cannot formulate any opinion. With the people of India it is otherwise. This vast varied and closely congested community contains small but important sections who can and do formulate opinions on political questions. The opinion of these sections cannot be accepted as the final criterion of Indian policy if only because the sections in question are relatively too small. If the responsibility of final decision were committed to the sections capable of forming an opinion, they could not discharge it. They could not themselves enforce their decisions on the overwhelming majority who would overpower them, and we cannot enforce political decisions which are not ours. Indian opinion cannot rule India, at any rate until the Indians capable of forming such opinion are united, organized, and numerous enough to exact regular, willing, and continuous obedience from their fellow countrymen who have not as yet acquired the faculty of political judgement. This would be so if Indian opinion were really as sound and disinterested as our own now is, with all its conspicuous failures. Certainly it is not. It has to improve in quality as well as in quantity, and it must be the first business of our Government to improve both. But still Indian opinion there is, in a sense in which there is no political opinion in Central Africa. And the fact is rightly recognized. Broadly speaking, Government is at pains to recognize such opinion as there is. It accepts it where it can, often when it thinks that Nationalist opinion is not the best, ignoring it only where it appears so unsound that to accept and act upon it would lead to disaster. The policy of the British Government is to develop that opinion and to allow it to influence policy more and more. The responsibility of final decision it still reserves to itself. But it now looks to a time, however remote, when it will be able to transfer that responsibility to a section of Indians sufficiently large, disinterested, and capable of sound political judgement to assume it.

That in the faintest outline is the position in India as I see it, and that is how it differs from the position in Central Africa.

Now consider the bearings of all this on the problem before us. Our new and reformed Imperial Government must control India and Central Africa—

(a) in their domestic affairs,

(b) in their external affairs.

The domestic affairs (a) of these two groups are already controlled

on different principles. Now in controlling their external affairs, closely connected as they always are with domestic affairs, will you be right in lumping India with Central Africa and in treating them on the same footing? If so, let us do it, facing the fact that we cannot effect the changes advocated in the volumes already published without provoking in India an agitation, which, as I judge might lead to bloodshed. Let us face that, if it is right, with all the attendant risks; but only after an exhaustive analysis of the *prima facie* case that as our method of controlling the domestic affairs of India and Central Africa differ, to that same extent *should our method of controlling their external affairs differ*. If we are right in allowing such Indian opinion as there is to influence domestic policy, must we not find a way of enabling that same opinion to influence external policy? Must not Indian influence be brought to bear on Imperial decisions to the same extent that it is being brought to bear on purely Indian decisions?

Our task then is to bring home to the public in the United Kingdom and the Dominions how India differs from a country like Great Britain on the one hand and from Central Africa on the other, and how that difference is now reflected in the character of its government. We must outline clearly the problems which arise from the contact of East and West and the disaster which awaits a failure to supply their adequate solution by realizing and expressing the principle of Government for which we stand. We must then go on to suggest a treatment of India in the general work of Imperial reconstruction in harmony with the facts adduced in the foregoing chapters. And all this must be done with the closest attention to its effects upon educated opinion here. We must do our best to make Indian Nationalists realize the truth that like South Africa all their hopes and aspirations are dependent on the maintenance of the British Commonwealth and of their permanent membership therein. We must do our best to convince them of the mischief to their own cause wrought by the deliberate campaign which is on foot here to embitter feeling against the Dominions. The cultivation of hate here as in Ireland is the greatest of all the obstacles to freedom, an *ignis fatuus* which only leads men into an ever-deepening morass. But anything we say will be futile unless we have taken the trouble to study their position at first hand. I must make the leaders scattered over India feel that I have been at pains to learn their aspirations from their own lips and to try and understand them. We shall do positive harm if they have reason to say that we offer opinions on questions vitally affecting this vast community without even discussing with Indians what Indians have to say on the subject. They are reading and discussing our books. The whole stock in Macmillan's hands here is already exhausted. *New India* has devoted five articles to reviewing 'the Problem' and for your further information I attach a lecture by a moderate Nationalist, Pradhan, on both the volumes.

on different principles. Now in controlling their external affairs, closely connected as they always are with domestic affairs, will you be right in lumping India with Central Africa and in treating them on the same footing? If so, let us do it, facing the fact that we cannot effect the changes advocated in the volumes already published without provoking in India an agitation, which, as I judge might lead to bloodshed. Let us face that, if it is right, with all the attendant risks; but only after an exhaustive analysis of the *prima facie* case that as our method of controlling the domestic affairs of India and Central Africa differ, to that same extent *should our method of controlling their external affairs differ*. If we are right in allowing such Indian opinion as there is to influence domestic policy, must we not find a way of enabling that same opinion to influence external policy? Must not Indian influence be brought to bear on Imperial decisions to the same extent that it is being brought to bear on purely Indian decisions?

Our task then is to bring home to the public in the United Kingdom and the Dominions how India differs from a country like Great Britain on the one hand and from Central Africa on the other, and how that difference is now reflected in the character of its government. We must outline clearly the problems which arise from the contact of East and West and the disaster which awaits a failure to supply their adequate solution by realizing and expressing the principle of Government for which we stand. We must then go on to suggest a treatment of India in the general work of Imperial reconstruction in harmony with the facts adduced in the foregoing chapters. And all this must be done with the closest attention to its effects upon educated opinion here. We must do our best to make Indian Nationalists realize the truth that like South Africa all their hopes and aspirations are dependent on the maintenance of the British Commonwealth and of their permanent membership therein. We must do our best to convince them of the mischief to their own cause wrought by the deliberate campaign which is on foot here to embitter feeling against the Dominions. The cultivation of hate here as in Ireland is the greatest of all the obstacles to freedom, an *ignis fatuus* which only leads men into an ever-deepening morass. But anything we say will be futile unless we have taken the trouble to study their position at first hand. I must make the leaders scattered over India feel that I have been at pains to learn their aspirations from their own lips and to try and understand them. We shall do positive harm if they have reason to say that we offer opinions on questions vitally affecting this vast community without even discussing with Indians what Indians have to say on the subject. They are reading and discussing our books. The whole stock in Macmillan's hands here is already exhausted. *New India* has devoted five articles to reviewing 'the Problem' and for your further information I attach a lecture by a moderate Nationalist, Pradhan, on both the volumes.

Having drafted already the historical section of the volume up to 1813 and done much of the reading necessary to bring it up to date, I happily start with the necessary grounding of book-work. Meston is putting me in touch with the History Professor here who has all the history at his finger's end and will help me to put the historical sketch into a sound and workmanlike form, just as Egerton, Fisher, Seton, Rait and others have done in the previous volume. The question how I am to equip myself for the task of presenting India as it is and of showing how it can be fitted into the framework we have outlined in the previous volumes can best be answered by giving you the programme sketched for me by Chirol, Meston, and Marris. Till November 24 I remain here, where the provincial legislature is in session, seeing nationalists, educationalists, missionaries, government officials, and unofficial Europeans. These are classes I must see in every centre I visit. On November 25 Chirol and I join in camp an experienced Commissioner in the Central Provinces and a colleague of Chirol's on the Public Services Commission. He is both an important source of general information and will be able to show me really primitive India at first hand. For while I have said that India must be distinguished from a primitive society, such as that of Central Africa, it is to be realized that India yet contains primitive tribes as backward as, and more numerous than, the aborigines in all Africa.

On December 6 I am to reach Calcutta where I shall stay with the American Y.M.C.A., who are closely in touch with the Bengali youth, Duke's friend, Gourlay, and Lord Carmichael. Here, of course, I must pay special attention to the position of the great European community in Calcutta and Assam.

On December 24 I rejoin Meston for a week at Lucknow to attend the National Congress and the All-India Muslim League which will then both be holding their annual sessions there. Thence about January 1 I go to Bombay for a few days with Chirol who will then take me to the Resident in Mysore, who will show me an advanced Native State in working. On January 15 I go to Madras, and thence on January 25 I leave to visit the Round Table group at Agra. Then I am to go with Marris into camp again in a typical district of Northern India, see the Collector at work and what village life in India means—the life led by a vast majority of the population. About February 18 I return to Delhi where Lord Chelmsford wants me to see the Viceroy's Legislative Council at work. There I shall have ample opportunities of seeing the Nationalist members and the members of the Government of India, several of whom I have already met, and all of whom show every possible disposition to help us in our work. By that time I should have a long list of things upon which I want accurate information obtainable only from the Secretariats. From Delhi I am also to make expeditions to see Sir Michael O'Dwyer at Lahore, and to get a glance at frontier conditions.

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It highlights the journal's role in providing
 a platform for the dissemination of research findings and
 the advancement of the discipline. The second part of the
 paper focuses on the journal's commitment to diversity and
 inclusion, emphasizing the need for a more equitable and
 inclusive research agenda. The third part of the paper
 discusses the journal's efforts to promote the use of
 research in management education, highlighting the
 importance of evidence-based practice. The fourth part of
 the paper discusses the journal's commitment to
 transparency and accountability, emphasizing the need for
 open access and the sharing of research data. The fifth
 part of the paper discusses the journal's commitment to
 the development of the field of management education,
 highlighting the need for ongoing research and
 innovation. The final part of the paper discusses the
 journal's commitment to the advancement of the
 discipline, highlighting the need for a more
 comprehensive and integrated approach to research.

Having drafted already the historical section of the volume up to 1813 and done much of the reading necessary to bring it up to date, I happily start with the necessary grounding of book-work. Meston is putting me in touch with the History Professor here who has all the history at his finger's end and will help me to put the historical sketch into a sound and workmanlike form, just as Egerton, Fisher, Seton, Rait and others have done in the previous volume. By that time I should have a long list of things upon which I want accurate information obtainable only from the Secretariats. From Delhi I am also to make expeditions to see Sir Michael O'Dwyer at Lahore, and to get a glance at frontier conditions.

Then about April I shall begin to arrange my materials and ideas and to draft out what I am going to say. For on this point we are all of one mind. I must draft out my results before I leave India for two principal reasons. In the first place the moment one starts to draft one runs into points which cannot be dealt with, without accurate documentary information. Before leaving England I wanted to see how the so-called elective members on the Indian and Provincial Councils were elected and who and how many were the electors. The information was not obtainable in the India Office, had to be sent for to India and had not arrived when I left. Even here the complete information can only be furnished by reference to Provincial Governments. It is vital to the whole treatment of the subject to show how many of the 315,000,000 inhabitants of India have any voice, direct and indirect, in choosing these so-called elective bodies, and also how far election is as yet a reality at all. To leave India without having the facts and figures settled is to court indefinite delay, and it is impossible to foresee and collect all the material necessary until you actually draft.

But there is a more important consideration. As a sort of super-journalist much of my information has been derived from pumping people with first-hand knowledge. But whenever I have worked out my results and submitted them to those on whose verbal communications they are based, a host of misunderstandings have invariably come to light. This is why our reports have on the whole stood fire as well as they have. We have drawn criticism from responsible quarters before we published. I should hesitate to publish anything until I had threshed it through with half a dozen men like Meston and Marris first. I shall not always agree with them (or they with each other), but I must know first where I differ and also why, if I am bold enough to go on differing. Meanwhile copies can be sent to you so that the Indian moot can prepare their criticisms against my return, the date of which it is useless to forecast as yet. All I can say is that I shall spare no pains to get the results ready for publication before the next Imperial Conference can be held. The period of the cold weather is all too short in which to acquire the knowledge necessary for such a task, and to leave India, without first submitting my version of the facts, my reasoning upon them, and my final conclusions to those who have furnished the materials is to court misunderstanding from the outset.

Meantime let me frankly confess that the task of coping with all the correspondence which reaches me in a country where stenographers are scarcely available is plainly impossible. I could only do so by neglecting the writing up of my notes, and leaving so much information obtained by word of mouth to sink into the limbo of forgotten things. My only chance is to make careful *subsequent* notes of conversations, for most people can't talk freely to a man armed with a pencil and note-book. For this reason I shall be deeply indebted to all my friends who will acquit me of avoidable neglect in this matter.

My only chance is to make careful *subsequent* notes of conversations, for most people can't talk freely to a man armed with a pencil and note-book. For this reason I shall be deeply indebted to all my friends who will acquit me of avoidable neglect in this matter.

I am printing this letter for circulation amongst friends to whom I cannot write, including the secretaries of local groups. I will ask each secretary to read it to his group. I shall be obliged if every one to whom it is sent will treat it just as they would a personal letter written and signed by myself and marked 'Private'.

Yours sincerely,

L. CURTIS.

To: The Secretary of the Round Table, 175 Piccadilly, London, W.

§ 11. From the foregoing narrative it will easily be understood that I have developed in the course of years close personal relations with an enormous number of friends all over the Empire. Their homes are open to me when I travel, as mine is to them when they come to England. They write to me freely and I can only keep pace with my correspondents by the assistance of one or two skilled stenographers. Even so, in order to deal with the letters I receive, I have often been driven to multiplying copies of a private letter to one friend and sending them to a large number of others. I have commonly followed this practice where a letter dealt with matters affecting the progress of our work. I have often kept by me a pile of such copies for some weeks, using them for replies to my Round Table colleagues as their letters came in. My typist having enlisted I was unable to bring him with me as I had done on a previous tour, and so I have found myself much in the position of a doctor who tries to deal on foot with a practice developed with the aid of a motor. On my recent voyage from Australia to India I had, by dint of continuous writing, worked off my accumulated arrears. I had recently heard that all the results were lost in the *Arabia*, so I wrote to Mr. Kerr with the intention of following my usual practice.

When I sat down to write this letter on November 12 I had not discussed the political situation with Sir James Meston at all. I know this, because shortly before I left on November 24 I had half an hour's talk with Sir James on the subject, and he expressed his regret that he had not found time to discuss the political situation, and promised to do so when I rejoined him at Lucknow for Christmas week. With Mr. Marris I can have discussed it very little, if at all, as during the brief intervals we had together we were largely occupied with the question of my own plans.

On the evening of November 13 I showed the draft of

§ 11. From the foregoing narrative it will easily be understood that I have developed in the course of years close personal relations with an enormous number of friends all over the Empire. Their homes are open to me when I travel, as mine is to them when they come to England. They write to me freely and I can only keep pace with my correspondents by the assistance of one or two skilled stenographers. Even so, in order to deal with the letters I receive, I have often been driven to multiplying copies of a private letter to one friend and sending them to a large number of others. I have commonly followed this practice where a letter dealt with matters affecting the progress of our work. I have often kept by me a pile of such copies for some weeks, using them for replies to my Round Table colleagues as their letters came in. My typist having enlisted I was unable to bring him with me as I had done on a previous tour, and so I have found myself much in the position of a doctor who tries to deal on foot with a practice developed with the aid of a motor. On my recent voyage from Australia to India I had, by dint of continuous writing, worked off my accumulated arrears. I had recently heard that all the results were lost in the *Arabia*, so I wrote to Mr. Kerr with the intention of following my usual practice.

When I sat down to write this letter on November 12 I had not discussed the political situation with Sir James Meston at all. I know this, because shortly before I left on November 24 I had half an hour's talk with Sir James on the subject, and he expressed his regret that he had not found time to discuss the political situation, and promised to do so when I rejoined him at Lucknow for Christmas week. With Mr. Marris I can have discussed it very little, if at all, as during the brief intervals we had together we were largely occupied with the question of my own plans.

On the evening of November 13 I showed the draft of

the letter to Sir Valentine Chirol who returned it to me with a few verbal corrections of phraseology. I then asked Sir James, during a meal, if he would also read it, to which he agreed. I also explained why I wanted to send copies to other friends and asked whether it would be possible for me to engage the services of a typist in Allahabad, as I had often done in Canada, New Zealand, and Australia. Sir James thought not and offered to have some copies run off for me on his press at my expense. On my journey through the Dominions I had often been indebted to both private and official clerical assistance. At one Government House the staff placed at my disposal a typist who happened not to be busy for the moment. In India, where printing is so cheap that it largely takes the place of type-writing, there seemed nothing unusual in the offer. The account for the printing was sent me at Calcutta, and was paid by me while I was at Lucknow.

As my writing is not very good, Sir James preferred to read the letter in proof. It was therefore sent to the press, and I gave the proof to Sir James, but he was so busy that he was unable to deal with it before the evening of November 23, the day before I left. Later on I learned on unimpeachable authority, though he was too generous to say so himself to me, that he had not found time to read the proof. It came back to my hands without a single alteration. My recollection is (though I might be mistaken in this) that I then inserted in the proof at the end of the third paragraph the words 'This letter, which has been revised in detail by them, may be taken as representing our joint view.' When inserting this sentence I was thinking solely of the subject before our minds, my own plans, and especially of the agreement that I ought to remain here during the summer. The proof having lain on Sir James's table from about November 15 till the night of November 23, a few hours before my departure, I completely overlooked the fact that I had not shown it to Mr. Marris. He never saw the letter, and I never realized that he had not seen it, until a month later. The thing was a blunder occasioned by the haste in which I was trying to dispose of a number of different matters on the eve of my departure. My apologies are due to Mr. Marris and to him alone. Had I been writing for publication the mistake could not have occurred because the letter would have needed his signature.

I left the proof with the Private Secretary, asking him to print 500 copies and dispatch some of them to Mr. Kerr

and others, all personal friends whom I had recently visited in Canada, Australia, and New Zealand. Some other copies were to be sent to me, and the rest were to be retained by the Private Secretary till I came to Lucknow. All these copies were to be sent in duplicate by successive mails on account of war risks. In fact I doubled the order I should have given under ordinary conditions. To Canada, where there are upwards of twenty groups, I asked for fifty to be sent in two packets by successive mails. A large number were held in reserve for sending to future correspondents. The contention that I was printing not a private letter but a semi-public circular is answered by the closing words of the letter 'I am printing this letter for circulation amongst friends to whom I cannot write, including secretaries of local groups. I will ask each Secretary to read it to his group. I shall be obliged if every one to whom it is sent will treat it just as they would a personal letter written and signed by myself and marked *Private*.'

Turning to the letter itself there is one point upon which I have to express my regret. I refer to the statement 'that India yet contains primitive tribes as backward as and more numerous than the aborigines in all Africa'. I now realize that the figures I had in mind included the depressed classes in India who certainly stand on a plane of civilization entirely different from Negro society. I am sorry to have made such an error even in a private letter, yet strangely enough it has scarcely been noticed.

§ 12. The answer to most of the serious charges brought is contained in the letter itself. Take for instance the most serious charge--that I urged the subjection of India to the colonies at the cost of bloodshed. That word is purposely chosen to point a warning--as a preface to a plea for finding a course acceptable to India. Incidentally I add 'Let us face that, *if it is right* with all the attendant risks'. I do not wish to alter a word of that sentence and never shall. We resisted the invasion of Belgium with all the attendant risks, though we knew that the world would run with blood--because it was right. To prevent the secession of South Carolina Lincoln steeped his country in her own blood--because it was right. If a thing is right it cannot be wrong, and to any one who does not hold the faith held by the Jains, bloodshed may on occasion be right. But I do hold that no one is justified in adopting a course which may lead to bloodshed, unless after the fullest inquiry he is assured that it is right, and has left no stone unturned to find another.

I now realize that the figures I had in mind included the depressed classes in India who certainly stand on a plane of civilization entirely different from Negro society. I am sorry to have made such an error even in a private letter, yet strangely enough it has scarcely been noticed.

§ 12. The answer to most of the serious charges brought is contained in the letter itself. Take for instance the most serious charge--that I urged the subjection of India to the colonies at the cost of bloodshed. That word is purposely chosen to point a warning--as a preface to a plea for finding a course acceptable to India. Incidentally I add 'Let us face that, *if it is right* with all the attendant risks'. I do not wish to alter a word of that sentence and never shall. We resisted the invasion of Belgium with all the attendant risks, though we knew that the world would run with blood--because it was right. To prevent the secession of South Carolina Lincoln steeped his country in her own blood--because it was right. If a thing is right it cannot be wrong, and to any one who does not hold the faith held by the Jains, bloodshed may on occasion be right. But I do hold that no one is justified in adopting a course which may lead to bloodshed, unless after the fullest inquiry he is assured that it is right, and has left no stone unturned to find another.

The chance that a course may provoke bloodshed is nearly always a proof that it is wrong. Personally I should say that Ireland should be given home rule when and *only when* the reform can be carried without civil war. On the other hand to take a purely imaginary case, if some one had stirred up the Europeans resident in India to resist the Morley-Minto reforms, I personally should have favoured the use of any force necessary to repress such resistance. No general rule can be framed in such matters: it is all a question of opinion, and each case must be judged on its merits. But this I do say that a thoughtful man will be slow to accept a new policy if he is warned that it may lead to bloodshed. It will need the most cogent reasons to overcome the suspicion with which he will view it. Writing to thoughtful men I felt it my duty to tell them that here was a policy to which India would have the profoundest objections, and went on to urge that India herself must be given a voice in the organ of government which controlled her affairs. The rest of the paragraph is an argument that the opinion of educated India is entitled to such a place.

The charge that I have compared Indians to Negroes I pass. Any one who can read the letter at all can judge of its truth. It is just as true, no more and no less, to say that I compared Indians to Europeans.

The charge that I am a foe to self-government for India is also refuted by the letter itself. 'We must outline clearly', I wrote, 'the problems which arise from the contact of East and West and the disaster which awaits a failure to supply their adequate solution, by realizing and expressing the *principle of government for which we stand*.' The whole argument of the books I have published is that self-government is the principle for which we stand. In a condensed phrase, such as friends who know each other's ideas use to each other, I am saying that self-government must be applied to the East as well as to the West.

With one exception the passage in my letter dealing with politics is simply a crude and hasty summary of views already contained in my published books. The one exception is the argument that India must be given a voice in Imperial affairs. My last book, *The Problem of Commonwealth*, is specifically confined to the position of the United Kingdom and the Dominions in a future Imperial Government. I had to express my honest belief that no Imperial Cabinet could control foreign affairs unless it included the Secretary of State for India. But I had specifically left the position

The chance that a course may provoke bloodshed is nearly always a proof that it is wrong. With one exception the passage in my letter dealing with politics is simply a crude and hasty summary of views already contained in my published books. The one exception is the argument that India must be given a voice in Imperial affairs. My last book, *The Problem of Commonwealth*, is specifically confined to the position of the United Kingdom and the Dominions in a future Imperial Government. I had to express my honest belief that no Imperial Cabinet could control foreign affairs unless it included the Secretary of State for India. But I had specifically left the position

of India in a reformed Imperial Government to be treated in a separate volume, which could only be written after a local study of the views of Indians themselves. I had already reached the view urged upon me by Sir James Meston that India must have a voice in Imperial affairs, a view confirmed by the experiences of my short stay in India. This much I was prepared to say to my colleagues, though I was not, nor am I yet, prepared to express any final view as to how this can be done. That surely is a matter to which any serious student would desire to give more consideration than was possible after three weeks in the country concerned.

This summary of my views was purely incidental to the point occupying our minds on November 11 and 12 which was, my movements in India and the length of my stay there. There was no call for any agreement between us on Indian politics either then or later. As I stated at the end of the letter, 'I shall not always agree with them (or they with each other).' I said this because I do not always agree with them. It is not clear in the letter that the agreement relates only to my plans. Writing to private friends anxious to know my plans the ambiguity was of little importance. Had the letter been read by all concerned with a view to signing it for publication such an ambiguity could scarcely have escaped notice, and would have been removed.

The governing factor in the case is that this was a private letter, written without any thought of publication, and must be read as a private letter. A man writing for publication is writing for an infinite variety of readers, many of whom may know nothing of the subject with which he deals. He must be careful to supply all the information necessary, without which his meaning will be liable to be misunderstood. With that purpose in view he must try to picture to himself and avoid every cause of misunderstanding or offence to which his words may give rise. If I had been writing with any thought of publication, I should have referred to the prefaces of my books or have quoted their contents. I should have weighed every statement and every word. Personally I never publish anything which has not been rewritten many times over. In a letter addressed to intimate friends to whom all the facts contained in my prefaces were familiar, there was no need to do this. If people were bound to write to each other with the same care that they write for publication life would be intolerable,

just as intolerable as if they were expected to converse in private with the same care that a man should use in a public speech. Criminal documents or conversations are not entitled to privilege. But conspiracy involves secrecy at least. There was no secrecy in my relations to the other gentlemen concerned. There was no secrecy in the organization or objects of the Round Table groups. The whole of the facts from first to last had been made public by those charged with conspiracy. I had no right to expect the public in India to know all these facts. But I was not writing for the Indian nor for any other public. If I had been I should have been most careful to recount the necessary facts. I was writing to private friends who knew them by heart. The points, however, which I wish to emphasize are those which do not appear on the face of the letter itself. They are two.

(1) When I wrote the letter on November 13 I had not discussed the current situation in India with Sir James Meston, I did not know his views and was not in a position to state them. As a matter of fact he did not read the proof.

(2) Through an inadvertence, for which I am solely responsible, Mr. Marris never saw the letter at all, until he knew that it was being made public a month later.

§ 13. I must here mention an incident which occurred after I had written this letter and before I left Allahabad. I was strongly advised by some European, as well as by Indian friends, to avoid staying with officials. While at Allahabad I received from an unknown hand a cutting from a newspaper, which ran as follows :

Stormy Petrels.—We are very sorry to see that Mr. Lionel Curtis is travelling with one of educated India's most deadly foes, Sir Valentine Chirol. It bodes ill for Mr. Curtis' attitude towards India, already none too favourable. They come from Simla to stay at Government House, Allahabad. Sir Valentine Chirol is ever a welcome guest of the highest officials, and his fatal influence distorts their view of India. That one of the leaders of the Round Table is seeing India under such auspices will greatly increase her difficulties in winning her place in the Empire.

The point deserves some attention because every other Englishman who comes to study Indian affairs and has numerous friends amongst the officials will find himself in the same predicament. My own solution was as follows : Sir James Meston had introduced me to the Hon. Dr. Tej Bahadur Sapru, member of the Viceroy's Council, the

Hon. M. C. Y. Chintamani, Editor of the *Leader*, and Mr. Ishwar Saran, explained to them the reasons for my coming to India, and then withdrew, leaving me alone to listen to their views. The interview led to a courteous invitation, which I gladly accepted, to discuss matters further with a number of their friends at Dr. Sapru's house. To this gathering I read the cutting which had reached me in the meantime, and pointed to the difficulty in which it placed me. I had numerous friends, I said, in the service, and knew their various points of view pretty well before I came here. It was for that reason that, on the advice of Sir James Meston, I had come here to make the acquaintance of Indians and learn their point of view. Now in order to gain the friendship and confidence of Indian gentlemen, was I to make a show of suspending my relations with Englishmen who were my friends before I reached India and would be when I had left it? That was scarcely the way to earn the friendship of Indians. Rather I preferred to make it known to them who my friends and what my connexions were, and then leave them to judge whether to admit me to their intimacy. So I told them the history of my connexion with Sir James Meston, Mr. Marris, and Sir Valentine Chirol. I told them also that I had been head of the department in the Transvaal which was charged with controlling Asiatic immigration. That is the course I have always followed until the publicity forced upon me rendered it unnecessary, and I have found that Indians, like every one else, are readier to talk freely to a man, when they find that he has nothing to conceal.

On November 24 I left Allahabad for the Central Provinces, reached Calcutta thence on December 16, and rejoined Sir James Meston at Lucknow on December 24, in order to be present as a visitor at the meetings of the Indian National Congress and the All Indian Moslem League.

On December 25 a Lucknow paper announced that

The anti-Indian forces are at work. They are organizing their campaign. The ROUND TABLE propagandists are very busy indeed and they have influence too. . . . Our countrymen should bear in mind that the enemies of Indian aspirations of the Curtis and Chirol kind mean business, and they are the respectable guests at Government House. They may have access to information which we cannot dream of. They are very astute men hiding as they do, sharpening [*sic*] claws with velvet paws. Great is the danger ahead.

This was followed by another article on the 26th headed
BEWARE OF THE ROUND TABLE. BEWARE OF CURTIS,
in which it was said :

The heroes of the Round Table are prepared to have their way. They are sowing the seeds of wild mischief. They are prepared to effect the changes at whatever cost. We will protest with all our strength and vigour against the over-lordship of the Colonies over us. But we shall not, even at the worst provocation, budge an inch from the straight road of strict constitutional agitation. Ahimsa Paramo Dharma,¹ say our shastras. We shall not resort to, nor shall we tolerate violence. We shall not do anything which might hurt even the offending man.

On the 27th I received information which gave me the first clue to this language. Some Indian friends informed me that a report was being spread like wild-fire amongst the crowds assembled for the Congress that I had advocated the subjection of India to the Colonies at the cost of bloodshed, and that I had classed Indians with Negroes. Meantime, the letter had been privately printed under a headline calculated to bias the reader in advance. On seeing this letter itself, my friends had found that it was in fact an argument against a policy which might, I feared, lead to bloodshed, and against the treatment of India in Imperial affairs on the same basis as Central Africa. My friends believed that the letter was about to be published in the *Bombay Chronicle*, and presently I received a telegram confirming this news.

§ 14. On telling Sir James Meston and Mr. Marris what had happened I learned for the first time that I had failed to show Mr. Marris the draft. I then wrote the following letter, which together with my letter to Mr. Kerr was immediately circulated to the leading papers throughout India :

GOVERNMENT HOUSE,
LUCKNOW :
The 28th December 1916.

SIR,

Yesterday I learned that a private letter of mine had been surreptitiously obtained (I do not know how or by whom) multiplied and distributed amongst a large number of people here. I now see from the public telegrams that it has been published in whole or in part in the *Bombay Chronicle*. The matter was brought to my notice by Indian gentlemen attending the Congress meeting who had no hesitation in expressing their disapproval of such conduct. They

warned me that preposterous inferences were being drawn by means of phrases quoted from the letter without reference to the context in which they appeared. The best answer to such misconstructions is the full text of the letter, and I shall feel myself under a very great obligation if you can find space to publish it in full. The letter explains itself and requires no justification to those who will read it carefully, remembering that it was written to intimate friends and not for publication. This is specifically stated in its last sentence.

An account of the objects and methods of the Round Table is given in the prefaces to the two books recently published over my name. It is an association of men working in groups in the various parts of the Commonwealth engaged in studying imperial problems for their own political guidance. As General Secretary I have been engaged in collecting and publishing materials for such study. The attached letter is an attempt to give the Secretary of the London Group, my impression, formed after spending a few weeks in India, of the character, magnitude, and delicacy of the work to be done here.

With regard to the three friends whose names are mentioned in my letter, a word must be added. My earlier studies of public affairs were concerned with conditions in England and South Africa, countries with which I was familiar; and the possibility that self-government was not an institution appropriate only to European communities did not occupy my thoughts. It was in discussion with the friends named that I was first persuaded that self-government was the aim to which British policy in India must be directed. They showed me that any complete study of imperial problems must include India; and I am here now in deference to their strong advice to come and study Indian opinion on the spot. I naturally consulted them in arranging my tour in India.

I am,

Yours faithfully,

L. CURTIS.

Mr. Marris was averse even to the brief reference I made to himself in this letter. If I had consulted my own wishes I should have added a statement to the effect that he had never seen my letter of November 13 at all.

At the time I believed that a wide publication of the letter would suffice to contradict the erroneous rumours which were current as to what I had written; and in this belief I was fortified by letters I received from Indian friends in the Congress, themselves pronounced Nationalists.

I am,

Yours faithfully,

L. CURTIS.

Mr. Marris was averse even to the brief reference I made to himself in this letter. If I had consulted my own wishes I should have added a statement to the effect that he had never seen my letter of November 13 at all.

At the time I believed that a wide publication of the letter would suffice to contradict the erroneous rumours which were current as to what I had written; and in this belief I was fortified by letters I received from Indian friends in the Congress, themselves pronounced Nationalists.

Let me quote from one of those letters :

I am writing this to express to you my personal regret as also that of many others that a private letter like this should be published. I should like you to believe that there are a good many of us who think it ungentlemanly to take advantage of a secret discovery in a private letter and to publish it to the world.

It has startled me to find that the passage in your letter where you speak of bloodshed, if India is to be treated in her external affairs as Africa, should be capable of misconstruction by any man of education. I am afraid attempts will be made to spread this misconception in the Congress camp and that the younger and less thoughtful members will be misled by it, but I trust that this will in any way deter you from carrying out the object which has brought you to India, and specially that part of it which aims at ascertaining the opinions of various classes of people.

In justice to the Indian National Congress and All India Muslim League, amongst whose members I have many personal friends, I am bound to add that the circulation of my letter at their gatherings was not the work of these responsible public bodies. To prove this statement let me quote from a letter written to me by one of their recognized leaders :

I was surprised to find that a private letter written by you to a friend was published. As you rightly say no responsible member of the Indian National Congress had any part or share in it.

The immediate purpose to which my letter was put is now a matter of common knowledge. The excitement raised by its circulation served to clinch the union between the Hindu and Moslem communities which it was desired to effect at Lucknow.¹ With regard to the means I have nothing to say here. With regard to the object I am glad to think that I have been the involuntary cause of a better understanding between those two great sections of the Indian People. As a student of history I have shown the heritage of mischief which followed from attempts made in the eighteenth century to rule Ireland and the American Colonies by fostering their divisions, and especially religious divisions. One may not agree with the immediate method and object of any particular movement ; but so long as that movement is legitimate in itself, one may surely rejoice in any tendency it may have to unite the religious

¹ For the Lucknow Compact see resolution appended to this letter p. 90.

INFORMATION SCIENCE

The first part of the book is devoted to the history of information science. It begins with a chapter on the history of information science, which traces the development of the field from its roots in library science and documentation to its current status as a distinct discipline. This is followed by a chapter on the philosophy of information science, which explores the epistemological and methodological foundations of the field. The third part of the book is devoted to the theory of information science, which discusses the conceptual framework and the various sub-disciplines of the field. This is followed by a chapter on the methodology of information science, which outlines the research methods and techniques used in the field. The final part of the book is devoted to the practice of information science, which discusses the application of the field to various social and cultural contexts.

The book is written in a clear and concise style, making it accessible to a wide range of readers. It is a valuable resource for students and researchers alike, providing a comprehensive overview of the field of information science. The book is divided into four main parts, each of which is further subdivided into chapters. The first part, 'History', covers the development of the field from its origins to the present. The second part, 'Philosophy', explores the theoretical foundations of the field. The third part, 'Theory', discusses the conceptual framework and the various sub-disciplines of the field. The fourth part, 'Methodology', outlines the research methods and techniques used in the field.

The book is a comprehensive overview of the field of information science, covering its history, philosophy, theory, methodology, and practice. Let me quote from one of those letters :

I am writing this to express to you my personal regret as also that of many others that a private letter like this should be published. I should like you to believe that there are a good many of us who think it ungentlemanly to take advantage of a secret discovery in a private letter and to publish it to the world.

It has startled me to find that the passage in your letter where you speak of bloodshed, if India is to be treated in her external affairs as Africa, should be capable of misconstruction by any man of education. I am afraid attempts will be made to spread this misconception in the Congress camp and that the younger and less thoughtful members will be misled by it, but I trust that this will in any way deter you from carrying out the object which has brought you to India, and specially that part of it which aims at ascertaining the opinions of various classes of people.

In justice to the Indian National Congress and All India Muslim League, amongst whose members I have many personal friends, I am bound to add that the circulation of my letter at their gatherings was not the work of those responsible public bodies. To prove this statement let me quote from a letter written to me by one of their recognized leaders :

I was surprised to find that a private letter written by you to a friend was published. As you rightly say no responsible member of the Indian National Congress had any part or share in it.

The immediate purpose to which my letter was put is now a matter of common knowledge. The excitement raised by its circulation served to clinch the union between the Hindu and Moslem communities which it was desired to effect at Lucknow.¹ With regard to the means I have nothing to say here. With regard to the object I am glad to think that I have been the involuntary cause of a better understanding between those two great sections of the Indian People. As a student of history I have shown the heritage of mischief which followed from attempts made in the eighteenth century to rule Ireland and the American Colonies by fostering their divisions, and especially religious divisions. and social divisions of India. It is in the nature of despotisms to foster such divisions, and a free system of government which seeks to build on such quicksands will surely come to grief. And this doctrine has been taught me not merely by history but by every thoughtful official I have met in this country. How different the situation would be if every educated Indian and Englishman here could learn to know more of each other's motives and minds.

To return to my letter, I will ask you to glance at a note received by the oversea mail as I write. It is from an English friend who has just heard of this controversy and he says :

I have read the letter twice and it appears to me that there is nothing in it that all the world might not know. After all you don't want to conceal the fact that Meston, Marris, and Chirol are friends of yours and that you have consulted them fully as to your plan of campaign, which seemed to me an excellent one for finding out the truth. In any case you couldn't have concealed your friendships even if you had wanted to which you wouldn't. The longer I live the more convinced I become that the only sound plan is to conceal nothing. I think you did quite right to publish your letter, and it seems to me you have nothing to regret. No honest man can find fault with it.

§ 15. If a man has no secrets to keep about himself the publication of his private letters or conversation will seldom hurt him. But the point I want you to consider is this. It may inflict a lasting injury on public interests. Secrecy is one thing and privacy another, and the respect due to privacy is even more vital to freedom in public affairs than in family life. Glance at the procedure of the Indian National Congress and you will see this at once. The business submitted to the Congress is first carefully prepared in the Subjects Committee, which sits in private. The reason is that the spokesmen of various sections may express their views to each other and yet be free to change them. They do this with the proper and legitimate end in view of arriving at a policy to which all can agree before submitting it to the Congress. Now suppose that one of these speeches in the Subjects Committee was overheard, or some private letter between two leaders was seized and then published in England to be read by people who scarcely know what the Congress is, what vast misunderstandings might be created, and how easily a charge of conspiracy could be raised! One private utterance or letter torn from its surroundings can be used to create false impressions which

[illegible]

Abstract

Abstract

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other variables constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other variables constant.

1000

and social divisions of India. It is in the nature of despotisms to foster such divisions, and a free system of government which seeks to build on such quicksands will surely come to grief. One private utterance or letter torn from its surroundings can be used to create false impressions which

inflict grave injury on the public at large, not merely in India but in England as well. For are we not all members of one body?

The privacy observed by the Round Table groups in their studies is based upon reasons somewhat different, but equally good. The object of the system is that men may think out their views (each for himself) before they declare and act upon them. In order to do that they must be able to write down their opinions for discussion with each other. I do this myself, and submit my views to my colleagues for the very reason that I am not sure of those views. The moment that I have a body of views of which I am sure, I publish them with the facts and the reasons upon which they are based. Clearly it is a greater evil to the public than to myself if private papers containing views of which I am not yet certain are seized upon and published, not merely as my views, but as those of the whole organization. Privacy is essential to political study until the results of the study are complete. When the student has published those results he is entitled to be judged by what he has published and by nothing else. It is not, however, a question of private rights. To deny this privacy to students of public affairs is to stifle the breath of freedom itself—to undermine the foundations upon which alone real liberty can be raised.

I will ask you to consider one special difficulty with which such work as mine is attended in India. To begin with the language in which Englishmen and educated Indians exchange their ideas is to Indians a foreign tongue. I think that both should keep this fact in mind more carefully than they do. An Indian gentleman of great ability, with whom I conversed freely in English, courteously pointed to certain passages in my books which had filled him with indignation. I had no difficulty in showing him that he had read these passages to mean the exact opposite of that which they actually meant. He had missed points of syntax vital to the sense, just as I myself miss them when I read French. But when such impressions get firmly fixed in the minds of a number of young men, whose knowledge of English is no better perhaps than mine of French, they are very difficult to correct. Only the other day I heard from a friend, of a young Indian who insisted that in my letter I had urged the subjection of India to the Colonies at the cost of bloodshed. My friend referred him to my letter, but having re-read it he declined to change his opinion. I believe his case is that of a vast number of young Indians. It is

difficult, indeed, to correct false impressions of a document written in a foreign tongue which have once sunk into their minds. I would urge their elders to weigh this fact before they lightly create such impressions.

§ 16. As I said at the opening of this letter, the charge of conspiracy brought against the *Round Table* and myself could not have been brought in the other parts of the British Commonwealth where the facts set out in this narrative were already known. For the general ignorance of these facts here I do not think that any one is to blame. If for the last four or five years *Round Table* groups, scattered through India, had been at work studying the position of India in the Commonwealth, I scarcely think that this indictment could have been drawn. The methods and objects of the system would have been too well known. As it was, but a single group had come into being, and that but lately. I have often been asked both in England, the Dominions, and here, why I had never before come to India to organize groups. The answer is simple. In this inquiry we have been working to keep pace with events which moved too fast for us, and I have not had enough years in my life to be in all the places that I could wish to have visited. This task, like so many others, is too great for the powers of any man, certainly for mine. Men can only do the best they can in the time they have, trusting each other to forgive their most imperfect results. But I had not been in India a month before I came to the conclusion that here, if anywhere, was need for the methods of inquiry which the *Round Table* provides. At Allahabad, at Calcutta, and elsewhere, I saw a great many Indians of all shades of opinion, and discussed the position of India in the Empire. Nearly all of them said 'Why cannot all these matters be discussed with us like this?' And I found a number of officials who felt the same. There were others, however, who took the opposite view. They thought that, if officials and Indians gathered socially in their own houses to discuss even the relations of India to the rest of the Empire, their opinions and intentions might be quoted and misrepresented, even though no misrepresentation was meant, and on becoming widely known might result in some such excitement as has actually occurred. Experience has proved the reality of these dangers, and yet, in the face of all that has happened, my opinion remains unchanged. Those dangers are largely due to the mutual suspicion which prevails between educated Indians and officials.

the United States, the United Kingdom, and Japan. The authors argue that the United States and the United Kingdom have a long history of environmental protection, while Japan has a more recent history of environmental protection.

The authors also discuss the role of the media in environmental protection. They argue that the media has played a significant role in raising public awareness of environmental issues and in pressuring governments to take action.

In conclusion, the authors argue that environmental protection is a global issue that requires the cooperation of all nations. They call for a more unified approach to environmental protection, one that takes into account the needs of all nations and all people.

The authors also discuss the role of the private sector in environmental protection. They argue that the private sector has a significant role to play in environmental protection, and that governments should encourage the private sector to take more responsibility for the environment.

The authors also discuss the role of the public in environmental protection. They argue that the public has a significant role to play in environmental protection, and that governments should encourage the public to take more responsibility for the environment.

The authors also discuss the role of the international community in environmental protection. They argue that the international community has a significant role to play in environmental protection, and that governments should encourage the international community to take more responsibility for the environment.

The authors also discuss the role of the future in environmental protection. They argue that the future has a significant role to play in environmental protection, and that governments should encourage the future to take more responsibility for the environment.

The authors also discuss the role of the past in environmental protection. They argue that the past has a significant role to play in environmental protection, and that governments should encourage the past to take more responsibility for the environment.

The authors also discuss the role of the present in environmental protection. They argue that the present has a significant role to play in environmental protection, and that governments should encourage the present to take more responsibility for the environment.

The authors also discuss the role of the future in environmental protection. They argue that the future has a significant role to play in environmental protection, and that governments should encourage the future to take more responsibility for the environment.

Nearly all of them said 'Why cannot all these matters be discussed with us like this?' And I found a number of officials who felt the same. There were others, however, who took the opposite view. They thought that, if officials and Indians gathered socially in their own houses to discuss even the relations of India to the rest of the Empire, their opinions and intentions might be quoted and misrepresented, even though no misrepresentation was meant, and on becoming widely known might result in some such excitement as has actually occurred. Experience has proved the reality of these dangers, and yet, in the face of all that has happened, my opinion remains unchanged. Those dangers are largely due to the mutual suspicion which prevails between educated Indians and officials.

There is more in common between some of my Indian and official friends than they realize, and much of the mutual distrust would vanish if they formed the habit of friendly discussion with each other. India is full of chasms which divide one class from another, but I think the most dangerous of all chasms is that which divides officials of my own race from educated Indians as a class. I do not say that there are no educated Indians on intimate terms with officials. Thank God there are. India would be in a parlous plight if there were not. But I do say that such friendships are too rare. When I add that officials and educated Indians stand opposed like two political parties, I am only pointing to acknowledged facts. From the nature of their relative positions, this must be so to some extent. It was so in the Transvaal before responsible government. But there the Dutch and ourselves were of one religion and closely akin. Deep as our differences were we mixed in a way which has never been found possible in India. Where chasms are fixed by facts we can never hope to remove them entirely. We cannot fill in the gulfs which divide races, creeds, or even classes from each other. But we can throw bridges across them, and we leave such chasms unbridged at our peril. Here I felt was a work to which the *Round Table* was naturally fitted and might contribute in a small way. So I hit on the idea of getting Englishmen with no official position to bring Indians and officials together to study the future relations of India to England, and the other parts of the British Commonwealth. This, I felt, was a subject which lies a little beyond the immediate problems of Indian Government. The idea was that they should begin by discussing together the two books on the subject I had published in order that later on they might work on the next one which was still in the making. My intention was to draft the chapters of the volume on India, and submit them to these groups. To me it would have been the greatest advantage to have had their criticisms. The opinions expressed by Indians and officials would certainly have differed in many respects, but after a long experience of these methods, I am satisfied that the criticisms of men who differ is never so valuable as when they have first discussed them together before writing them down. When people have talked things over, a host of misunderstandings vanish, unexpected points of agreement begin to appear, and the real points of difference are defined and brought into true proportion. It is only by this concussion of minds

Abstract

There is more in common between some of my Indian and official friends than they realize, and much of the mutual distrust would vanish if they formed the habit of friendly discussion with each other. India is full of chasms which divide one class from another, but I think the most dangerous of all chasms is that which divides officials of my own race from educated Indians as a class. I do not say that there are no educated Indians on intimate terms with officials. Thank God there are. India would be in a parlous plight if there were not. But I do say that such friendships are too rare. When I add that officials and educated Indians stand opposed like two political parties, I am only pointing to acknowledged facts. From the nature of their relative positions, this must be so to some extent. It was so in the Transvaal before responsible government. But there the Dutch and ourselves were of one religion and closely akin. Deep as our differences were we mixed in a way which has never been found possible in India. Where chasms are fixed by facts we can never hope to remove them entirely. We cannot fill in the gulfs which divide races, creeds, or even classes from each other. But we can throw bridges across them, and we leave such chasms unbridged at our peril. Here I felt was a work to which the *Round Table* was naturally fitted and might contribute in a small way. So I hit on the idea of getting Englishmen with no official position to bring Indians and officials together to study the future relations of India to England, and the other parts of the British Commonwealth. This, I felt, was a subject which lies a little beyond the immediate problems of Indian Government. The idea was that they should begin by discussing together the two books on the subject I had published in order that later on they might work on the next one which was still in the making. My intention was to draft the chapters of the volume on India, and submit them to these groups. To me it would have been the greatest advantage to have had their criticisms. The opinions expressed by Indians and officials would certainly have differed in many respects, but after a long experience of these methods, I am satisfied that the criticisms of men who differ is never so valuable as when they have first discussed them together before writing them down. When people have talked things over, a host of misunderstandings vanish, unexpected points of agreement begin to appear, and the real points of difference are defined and brought into true proportion. It is only by this concussion of minds

which differ that the grain of opinion can be winnowed from the chaff.

And a more important change is also produced when the real matter in dispute has been sifted out; for men find that they have learned to bear with each other's opinions in the process. There is no reason why an honest difference of opinion should anger men with each other, and yet we are always doing that unreasonable thing. My best friend once told me that I am most intolerant of people who differ from my opinions. He was never so much my friend as when he told me this home truth, and, if you think of it, this habit of getting angry with people because they differ is one of the greatest bars to self-government there is. Self-government depends so much on our power of discussing things calmly together, of understanding points of view from which we differ, and also in believing that they are held as honestly as our own. I sometimes feel that a society entirely composed of people like me might not be able to govern itself. I have always found, however, that the members of the Round Table groups tend to become more tolerant of each other's opinions. They are brought together because they differ, and in discussing their differences they come to understand and think better of each other. It is good to think that most of the ill will in the world is due to our knowing each other so little.

And so I quietly proceeded with this scheme for founding a few Round Table groups, undeterred by the demands made in some of the papers that Government should forbid its servants to have anything to do with such bodies. In Bombay, Calcutta, Madras, and elsewhere, independent Englishmen were found to undertake the work. They agreed to collect Indians and officials in their own homes to study this problem, the greatest problem I venture to say which has ever confronted men, the question how races as different as the world contains, are to live together and manage their own affairs in a Commonwealth which includes more than a quarter of the human race. The vision of Indians included in this fellowship of students united by nothing but a common resolve to discover and discharge their duty as citizens, each for himself, was actually in sight. Then suddenly the agitation achieved its end and the vision failed.

In happier times when men look back on these events and think them over with calmer minds, I wonder what they will say. I wonder whether they will think that India was

which differ that the grain of opinion can be winnowed from the chaff.

And a more important change is also produced when the real matter in dispute has been sifted out ; for men find that they have learned to bear with each other's opinions in the process. There is no reason why an honest difference of opinion should anger men with each other, and yet we are always doing that unreasonable thing. My best friend once told me that I am most intolerant of people who differ from my opinions. He was never so much my friend as when he told me this home truth, and, if you think of it, this habit of getting angry with people because they differ is one of the greatest bars to self-government there is. Self-government depends so much on our power of discussing things calmly together, of understanding points of view from which we differ, and also in believing that they are held as honestly as our own. I sometimes feel that a society entirely composed of people like me might not be able to govern itself. I have always found, however, that the members of the Round Table groups tend to become more tolerant of each other's opinions. They are brought together because they differ, and in discussing their differences they come to understand and think better of each other. It is good to think that most of the ill will in the world is due to our knowing each other so little.

And so I quietly proceeded with this scheme for founding a few Round Table groups, undeterred by the demands made in some of the papers that Government should forbid its servants to have anything to do with such bodies. In Bombay, Calcutta, Madras, and elsewhere, independent Englishmen were found to undertake the work. Then suddenly the agitation achieved its end and the vision failed.

In happier times when men look back on these events and think them over with calmer minds, I wonder what they will say. I wonder whether they will think that India was

The first part of the paper discusses the importance of the
 Journal of Management Education in the field of management
 education. It highlights the journal's role in providing
 a platform for the dissemination of research findings and
 the advancement of the discipline. The second part of the
 paper focuses on the journal's commitment to diversity and
 inclusion, emphasizing the need for a more equitable and
 inclusive research agenda. The third part of the paper
 discusses the journal's efforts to promote the use of
 research findings in the classroom, highlighting the
 importance of evidence-based practice in management
 education. The fourth part of the paper discusses the
 journal's commitment to the advancement of the
 discipline, highlighting the need for ongoing research
 and innovation in the field. The fifth part of the paper
 discusses the journal's commitment to the development of
 the field, highlighting the need for ongoing research and
 innovation in the field. The sixth part of the paper
 discusses the journal's commitment to the development of
 the field, highlighting the need for ongoing research and
 innovation in the field. The seventh part of the paper
 discusses the journal's commitment to the development of
 the field, highlighting the need for ongoing research and
 innovation in the field. The eighth part of the paper
 discusses the journal's commitment to the development of
 the field, highlighting the need for ongoing research and
 innovation in the field. The ninth part of the paper
 discusses the journal's commitment to the development of
 the field, highlighting the need for ongoing research and
 innovation in the field. The tenth part of the paper
 discusses the journal's commitment to the development of
 the field, highlighting the need for ongoing research and
 innovation in the field.

best served by those who conceived this project or by those who misunderstood it, made India misunderstand it and so brought it to naught.

§ 17. Let us now turn from the Round Table groups to the quarterly review from which for convenience sake these informal bodies of students borrowed their name. Personally I have never written a word in it. Its entire management has lain in the hands of my colleague, Mr. Kerr. Though exclusively devoted to the study of contemporary politics, it is scrupulously detached from any party. It largely consists of articles on the various communities of the Empire contributed by Round Table students in each. The writer alone is responsible for his own articles; but it is the rule that he should discuss his first draft with his group and then revise it before sending it to the Editor. This, of course, applies to the Dominions where groups were in existence. Each issue of the journal contains a notice specifying the name of one secretary in each country, to whom those desiring information about the *Round Table* might apply. In the case of India, several such people have been named. These facts in themselves belie any charge of conspiracy in the matter.

In the speech which opened the Indian National Congress at Lucknow, I was naturally pleased to hear some remarks on India in the *Round Table* quoted with approval. Now, for no other reason than that my letter was addressed to him, the Editor, Mr. Kerr, is attacked along with myself, as one of the enemies of India. Some Indian papers are viewing with suspicion and alarm his recent appointment to the Prime Minister's Staff.

Is it really in the true interests of India that names should be added to the list of her recognized enemies so freely? I do not know the man within whose power it lies to make Mr. Kerr an enemy of India. He is known to some of your leaders and I challenge their verdict. Must you really decline to recognize as friends Englishmen who believe in the goal to which you aspire, and do their best to make others believe in it too? Must you treat them as enemies, unless they are prepared to say that the goal can be reached in just the manner and at just the pace which your leaders desire? Consider the effect on those who do not appreciate your aims, when they see one who does, who is, perhaps, regarded as dangerously advanced, singled out for attack by the Indian Press. I am not thinking of myself, nor of my official friends. But I do say that if people elsewhere

best served by those who conceived this project or by those who misunderstood it, made India misunderstand it and so brought it to naught.

§ 17. Let us now turn from the Round Table groups to the quarterly review from which for convenience sake these informal bodies of students borrowed their name. Personally I have never written a word in it. Its entire management has lain in the hands of my colleague, Mr. Kerr. Though exclusively devoted to the study of contemporary politics, it is scrupulously detached from any party. It largely consists of articles on the various communities of the Empire contributed by Round Table students in each. The writer alone is responsible for his own articles; but it is the rule that he should discuss his first draft with his group and then revise it before sending it to the Editor. This, of course, applies to the Dominions where groups were in existence. Each issue of the journal contains a notice specifying the name of one secretary in each country, to whom those desiring information about the *Round Table* might apply. In the case of India, several such people have been named. These facts in themselves belie any charge of conspiracy in the matter.

In the speech which opened the Indian National Congress at Lucknow, I was naturally pleased to hear some remarks on India in the *Round Table* quoted with approval. Now, for no other reason than that my letter was addressed to him, the Editor, Mr. Kerr, is attacked along with myself, as one of the enemies of India. Some Indian papers are viewing with suspicion and alarm his recent appointment to the Prime Minister's Staff.

Is it really in the true interests of India that names should be added to the list of her recognized enemies so freely? I do not know the man within whose power it lies to make Mr. Kerr an enemy of India. He is known to some of your leaders and I challenge their verdict. Must you really decline to recognize as friends Englishmen who believe in the goal to which you aspire, and do their best to make others believe in it too? Must you treat them as enemies, unless they are prepared to say that the goal can be reached in just the manner and at just the pace which your leaders desire? Consider the effect on those who do not appreciate your aims, when they see one who does, who is, perhaps, regarded as dangerously advanced, singled out for attack by the Indian Press. I am not thinking of myself, nor of my official friends. But I do say that if people elsewhere

were to see Mr. Kerr named as one of the men whom Indians recognized as a treacherous foe, they would rub their eyes and wonder what strange illusion had seized this country.

But the mischief does not end there. Suspicious like these choke the channels by which the aspirations of India can be made to be understood elsewhere. Let me quote from a letter written by Mr. Kerr to one of his correspondents here, a copy of which he sent to me for my information and which I have authority to use.

I think we ought to have another article on India this winter, or at any rate not later than the Spring. From the outside point of view, what matters is giving people here and in the Dominions some idea of the effect of the War on Indian life and opinion. But there is one important point which I should like to see you make with all the force at your command, and that is the imperative necessity that people in Great Britain and the Dominions should realize that India is going to put forward, and rightly put forward, two demands after the War, and that they must give earnest and sympathetic consideration to these demands without delay. I don't think you need go into detail about the nature of the demands unless you feel inclined to do so. I think it will be sufficient to say that the first is for a further step towards self government in India, and the second that the interests and views of India should be represented directly when the future of the Empire and its policy is under consideration.

I think the greatest danger in the future is that the Indian demands will be pushed on one side on the ground that it is impossible to take them into consideration for some years owing to the pressure of business connected with the liquidation of the War in Europe. If we are to avoid the danger from delay of this kind it is very important, I think, that the *Round Table*, which has very greatly increased its influence since the War began, should make thinking men realize that whatever they may think about the proper answer to make to the Indian demand, they must be prepared to make some answer, and to make it without delay, without, that is, subordinating India's claim to time and attention to those of this country.

I don't know that this letter is very clear. We want an article in the *Round Table* on India and I suggest to you that the main conclusion which the reader should draw from it should be that the responsibility rests upon him of seeing that the Indian demands are sympathetically handled without delay after the War.

This letter he followed up by another to myself, in which he suggests that the Indian article should always be submitted for criticism before dispatch to some

Indian who is in touch with the main currents of Indian thought, and (he adds) his criticism of the draft and his suggestions as to the

Abstract—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders among different types of workers. The study included 600 employees from a large manufacturing company who had been employed for at least one year. The results showed that the prevalence of musculoskeletal disorders was higher among workers in the production department than among workers in the administrative department. The results also showed that the prevalence of musculoskeletal disorders was higher among workers who had been employed for more than five years than among workers who had been employed for less than five years.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other variables constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other variables constant.

matters of importance which ought to be recorded would be valuable. I don't imagine you will find it easy to do this, but I don't think there is anything which you can do in India which would bear richer fruit than that you should arrange that the *Round Table* should contain a quarterly review sympathetic yet impartial, and well informed, of what has been going on in India in the preceding three months.

These are the real views of a man against whom a warning has since been issued in the Indian Press as being implicated in a widespread conspiracy to frustrate the hopes of educated Indians.

With the views expressed in these letters from Mr. Kerr I entirely agree. It was partly with that object in view that I set to work to establish Round Table groups including Indians and officials in the various provincial centres. I was trying to arrange that in future articles written in India should be submitted to Indians and officials, and revised in the light of their criticisms before being sent to England. This system, strictly analogous to that which exists in England and the Dominions, has now been frustrated. The pages of the *Round Table* itself are now being ransacked for extracts to support the charge of hostility against India. Expressions of sympathy are used as a proof of treachery. The charge of 'velvet paws hiding sharpening claws' has resounded through the Press. The mere name of the *Round Table* has become the most powerful weapon for raising distrust. This would not be possible if the *Round Table* were judged on its merits and judged as a whole. The difficulty is that for every man who reads these productions in India thousands read what is said of them in the Press. The same is true of my own books and the same will be true of this letter.

A large quarterly like the *Round Table* is not intended so much for the average reader, as for those who write for average readers. It is meant to be a storehouse of information of all kinds upon which publicists can draw. Its articles must be taken on their merits and as representing nothing beyond the minds and information of the individual writer of each. The Editor himself is solely responsible for whatever he writes. The *Review* has published an article on Ireland, written by an avowed Nationalist. It habitually prints articles written by men who voice the views of labour and also of capital. If publicists search its back numbers they can prove by judicious extracts almost anything they like. But let any one read its numbers from first to last and then

say whether it is the organ of men who deserved to be ranked as enemies of educated India. But it is not and never will be the organ of any party in India. Nor would it serve the best interests of any such party if it was. As you see from Mr. Kerr's letter he thinks that the demands of educated India ought to be understood in England and the Dominions more widely than they are. I am not saying that he agrees with them all, and indeed those which are now being made had not been formulated when he wrote. But he thinks that the interests, not merely of India, but of the whole Commonwealth, require that those demands should be clearly understood and promptly considered after the war. I think he is right. I think that plea could have been argued in the *Round Table* with effect, for the very reason that it is not the organ of the Indian National party. But, if for the last six years the *Round Table* had voiced all their claims without criticism or discrimination, it would be of little service as a medium through which the case for an early and sympathetic consideration of those claims could be urged now.

As it is I have had to advise the Editor that so great is the mistrust with which the *Round Table* is viewed that, for the present, the only service it can render to India is to remain silent with regard to its affairs. This legend of conspiracy has been rooted so firmly in the minds of thousands who never see the *Round Table* itself that such articles as Mr. Kerr desired would be quoted as evidence of some sinister motive. I am sure that any one who has seen how freely the charge of treachery has been brought since Congress week would feel that silence is the only public-spirited course, until time and a fuller knowledge of facts has cleared those dark suspicions away. And that is why I am now doing my best to give you the facts.

But the matter goes deeper than the *Round Table*, so I ask you to bear with me while I deal with it further. There were always Englishmen of the first rank, and of great authority with their fellow countrymen, ready to voice the South African claim for self-government. Now why is it that, since the days of Bright and Bradlaugh, no one who carried real weight with the British public has been found to voice the aspirations of India? It is a real evil and a real danger. It ought to be remedied and I trust that it will. I hope and believe you will find an increasing number of Englishmen of the first rank who think you are right in seeking to attain self-government as soon as possible.

But those whose opinion has sufficient weight with British public opinion to be useful to your cause are the men who think for themselves. While agreeing with you as to the end, they are almost certain to differ as to some of the means. Your cause has everything to gain if you will leave them to support it so far as they can. Your English sympathizers who support your programme, your whole programme and nothing but your programme, are felt to have lost their sense of discrimination and, therefore, lose weight with the public they address. I ask for tolerance to those who believe in your aims and are ready to support them in public, while claiming the right to hold and express views of their own as to the roads by which they can be reached.

§ 18. For myself, I have come to India to learn, and every day I regret more deeply that I could not have come here before. The question I started to examine some eight years ago was the one forced upon my immediate friends and myself by events, the relations of England to the self-governing Dominions. Blame me as much as you like for this narrowness of view ; and yet I would urge, we have more to gain by trying to understand each other. My first step was to study opinion in the other Dominions as well as in South Africa. Now the factor which impressed me most in Canada, New Zealand, and Australia was the rooted aversion these peoples have to any scheme which meant their sharing in the government of India. There were many of them ready enough to send members to a Parliament which controlled the foreign affairs of the British Commonwealth. A much smaller minority were prepared to send members to a Parliament which controlled India. The feeling against such proposals was overwhelming and the reason is not far to seek. To these young democratic communities the principle of self-government is the breath of their nostrils. It is almost a religion. They feel as if there were something inherently wrong in one people ruling another. It is the same feeling as that which makes the Americans dislike governing the Philippines and decline to restore order in Mexico. My first impressions on this subject were strongly confirmed on my recent visit to these Dominions. I scarcely recall one of the numerous meetings I addressed at which I was not asked why India was not given self-government and what steps were being taken in that direction.

So evident was this feeling in these Dominions that I set out to inquire whether it was possible for a parliament to

§ 18. For myself, I have come to India to learn, and every day I regret more deeply that I could not have come here before. The question I started to examine some eight years ago was the one forced upon my immediate friends and myself by events, the relations of England to the self-governing Dominions. Blame me as much as you like for this narrowness of view; and yet I would urge, we have more to gain by trying to understand each other. My first step was to study opinion in the other Dominions as well as in South Africa. Now the factor which impressed me most in Canada, New Zealand, and Australia was the rooted aversion these peoples have to any scheme which meant their sharing in the government of India. There were many of them ready enough to send members to a Parliament which controlled the foreign affairs of the British Commonwealth. A much smaller minority were prepared to send members to a Parliament which controlled India. The feeling against such proposals was overwhelming and the reason is not far to seek. To these young democratic communities the principle of self-government is the breath of their nostrils. It is almost a religion. They feel as if there were something inherently wrong in one people ruling another. It is the same feeling as that which makes the Americans dislike governing the Philippines and decline to restore order in Mexico. My first impressions on this subject were strongly confirmed on my recent visit to these Dominions. I scarcely recall one of the numerous meetings I addressed at which I was not asked why India was not given self-government and what steps were being taken in that direction.

So evident was this feeling in these Dominions that I set out to inquire whether it was possible for a parliament to

control foreign affairs without controlling the government of India. Now any such proposal meant that the Imperial Cabinet responsible to that Parliament would include the Secretary of State for Foreign Affairs, but not the Secretary of State for India, who would have to be transferred to the new Dominion Cabinet created to govern the British Isles and answerable solely to a British parliament and a British electorate.

Here was a purely practical question which could not be tested by logic or reasoning, but only by the experience of men who had worked the machine. So I asked all the ministers I knew, who had ever sat in an Imperial Cabinet, whether they could picture the Foreign Secretary, the Minister for War and the First Lord of the Admiralty doing their work in a Cabinet which did not contain the Secretary of State for India. From all but one I received the unhesitating answer that they could not imagine it even for a year. The one exception thought that such an arrangement might be worked for a very short time, but was certain to break down in a few years. This last opinion I obtained only after I had finished and signed *The Problem of the Commonwealth*.

As an independent researcher my business is to emphasize those truths which people don't want to hear. The public has plenty of people to tell them the things they want to hear. The principal object of the Round Table groups is that students may learn to recognize those particular truths from which the natural man recoils. The people of the Dominions rightly aspire to control their own foreign affairs and yet retain their status as British citizens. On the other hand they detest the idea of paying taxes to any Imperial Parliament, even to one upon which their own representatives sit. The inquiry convinced me that, unless they sent members and paid taxes to an Imperial Parliament, they could not control their foreign affairs and also remain British subjects. But I do not think that doctrine is more distasteful to them than the idea of having anything to do with the Government of India. There are, I may add, a large number of people in England who share that view.

If you will read *The Problem of the Commonwealth* you will see that it is throughout an argument in favour of two doctrines addressed to people who are deeply averse to both. You will see by reference to p. 202 that I knew that India was extremely averse to one of them.

I am not a political leader who has to think of his following,

control foreign affairs without controlling the government of India. Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups.

Figure 1. A schematic diagram of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard training program, while the experimental group received a modified training program. The experimental group was further divided into two subgroups: the low-intensity group and the high-intensity group. The low-intensity group received a low-intensity training program, while the high-intensity group received a high-intensity training program. The subjects were then subjected to a series of tests to measure their performance and physiological responses.

nor a journalist who has to consider his circulation, but an isolated student of public affairs. I have been careful to speak for no one but myself, because I felt that one great need of the age was men who would search out and emphasize those truths from which the mind naturally recoils. Self-government would be a vastly easier matter than it is, if all we had to do was to don our wishing-caps and then count them. In truth self-government depends upon the capacity of men to recognize the truths they most dislike and to sacrifice their several wishes to the public good.

The root of the present trouble is that this insistence of mine on the doctrine that you cannot at present divide the control of India and the control of foreign affairs, has led to a false impression here that the Dominions want to control Indian affairs. There is nothing they less desire, and the best remedy for this false impression is a clear, unhesitating statement of the facts.

But why, you will naturally inquire, should all these communities be asked to adopt a course which the vast majority in each of them detest? I have given the answer in these books, and I ask you to consider it on its merits. I believe that, unless such changes are faced, the whole Commonwealth will dissolve and perish, and with it the principle of self-government for which that Commonwealth stands. It was in the same belief that Lord Roberts advocated national service. Lord Roberts never thought that the people wanted national service, but he urged its adoption on the ground that a worse thing might befall, and befallen it has. We now have compulsory service and with it a devastating war which its timely acceptance would have quickly ended and might have prevented.

§ 19. My insistence on this belief that the Secretary of State for India must sit in a reformed Imperial Parliament and not in the new Dominion Government of the British Isles, has led you to treat this book as one hostile to your aspirations. Indian reviewers were so possessed with that idea that they have seized upon and quoted all the passages which could be represented as hostile to their immediate programme, and have failed to notice those which endorse their ultimate aims. I will ask you to read one of these passages, on p. 205 of the *Problem of Commonwealth*.

Indian reviewers were so possessed with that idea that they have seized upon and quoted all the passages which could be represented as hostile to their immediate programme, and have failed to notice those which endorse their ultimate aims. I will ask you to read one of these passages, on p. 205 of the *Problem of Commonwealth*.

Principle of the Commonwealth as applicable to the Government of Dependencies :

The inclusion in one vast Commonwealth of the most democratic countries in the world side by side with ancient and primitive countries, which constitute whole sections of the human race and are scattered all over the world, is the consequence neither of chance nor of forethought. This conjunction of human elements so different in one world Commonwealth is the gradual result of the deepest necessities of human life. Of these the first is to establish ordered relations between most different races of men ordained by Providence to dwell together in one planet, the various regions of which have now been brought into intimate contact with one another. In order to do this the Commonwealth has had to evolve order from chaos in politically backward communities like India. But the Commonwealth cannot, like Despotisms, rest content with establishing order in and between the communities it includes. It must by its nature prepare those communities first to maintain order within themselves. It must make them, to an ever-increasing degree, the instruments whereby justice is ordained and enforced between one citizen and another. The peoples of India and Egypt, no less than those of the British Isles and Dominions, must be gradually schooled to the management of their national affairs. But even when this has been done, the goal of the Commonwealth has not been reached, until the mutual relations of all the self-governing nations it includes are controlled by the will of their peoples acting in common. It is not enough that free communities should submit their relations to the rule of law. Until all those peoples control that law the principle by which the Commonwealth exists is unfulfilled. The task of preparing for freedom the races which cannot as yet govern themselves is the supreme duty of those who can. It is the spiritual end for which the Commonwealth exists, and material order is nothing except as a means to it.

I have before me two reviews, each consisting of five successive articles. I am asked in these reviews why I do not apply my arguments in favour of self-government to India. The answer is contained in the passage I have quoted. I do apply those arguments to India, and yet amongst all the numerous quotations made in these ten articles no room was found for the passage above quoted. For every Indian who reads the book, there are, as I have said, thousands who read the reviews, and I wonder if their real interests would have suffered if space had been found to add this quotation.

When considering this passage I will ask you to fix your attention on the matter and to forgive the manner. Now that I have made some Indian friends, I begin to realize

Principle of the Commonwealth as applicable to the Government of Dependents :

The answer is contained in the passage I have quoted. I do apply those arguments to India, and yet amongst all the numerous quotations made in these ten articles no room was found for the passage above quoted. For every Indian who reads the book, there are, as I have said, thousands who read the reviews, and I wonder if their real interests would have suffered if space had been found to add this quotation.

When considering this passage I will ask you to fix your attention on the matter and to forgive the manner. Now that I have made some Indian friends, I begin to realize

how deeply, in their position, I should resent being told that I 'must gradually be schooled to the management of my national affairs'. I came here in order to learn how to recognize and avoid such mistakes. But in justice let me add that I spared no pains to avoid them before I came. Every word of this chapter was submitted to friends who had spent their lives in India, and had impressed upon me the duty of avoiding needless offence. Under their eyes I rewrote it again and again selecting the words they suggested as least likely to wound. I had spoken, for instance, of the people of the Dependencies, as distinguished from those in the self-governing countries, as 'non-Europeans'. I was advised to discard this word because it might suggest some idea of racial inferiority and to use 'politically backward' instead, on the ground that Indians recognized this backwardness as a fact they were anxious to change. Since coming to India this particular phrase has been pointed out to me as specially obnoxious. Please accept an expression of honest regret. Now that you know the facts, I will ask you to judge me by my intention. My stay here has made me realize that we in England have fallen into a habit of writing in one way, when we are talking of fellow citizens in the Dominions, and in another when we are talking of our fellow citizens in India and Egypt. It is one of the faults which can only be corrected by a closer acquaintance, and that is why it is of such importance that Indians and Englishmen should meet and learn to discuss their mutual relations without provoking each other. I have never yet seen a situation in which the public interests were served by men wounding each other's feelings. You will do me a service if you will continue to point out anything I may write which is not true, which had better have been left unsaid, or, if necessary to be said, could have been put in words less likely to hurt. And, it will help still further, if you can add example to precept. In all my personal intercourse with Indians I cannot recall a single thing said which I thought was meant to offend. It is with our pens that we wound, rather than with our tongues. I do say that we Englishmen have got to learn to write to our Indian fellow citizens exactly as we write to each other. But will you also realize that in that case we shall begin to write with greater frankness. And will you reciprocate that frankness with the same gentleness and courtesy that you use in personal intercourse.

§ 20. Now leaving faults of expression aside, I ask you to

But will you also realize that in that case we shall begin to write with greater frankness. And will you reciprocate that frankness with the same gentleness and courtesy that you use in personal intercourse.

§ 20. Now leaving faults of expression aside, I ask you to

consider what the passage to which I have drawn your attention means. In plain words it means these two things—

(1) That it is the duty of those who govern the whole British Commonwealth to do everything in their power to enable Indians to govern themselves as soon as possible.

(2) That Indians must also come to share in the government of the British Commonwealth as a whole.

That, in all sincerity, is my view. But it is also the view of a large number of people in England, and in all the Dominions. It is vital that you should realize how numerous are your friends in all these countries who instinctively believe in self-government for India ; but no less important that you should understand what we mean by that term. My own view is fully explained in *The Problem of the Commonwealth* ; but to put it in a nutshell I will tell you of a conversation I had with a very able and responsible friend in one of the Native States. I suggested that a great deal of misunderstanding was due to the fact that the term 'self-government' was used to include two ideas, which were in fact totally separate. 'In this State', I said, 'you have government of Indians by Indians. It is true you have some European officials who tell me that your Government is treating them well. But none the less the Government of His Highness the Maharaja is the government of Indians by an Indian. It is what we might appropriately call "Home rule", if that name had not been assumed by a particular movement. But to show you what I mean by self-government, let me ask you a question. Do you think that His Highness would be well advised to make the two following changes at once ?

'(1) To make his whole legislative council elective.

'(2) To undertake to appoint as Diwan the leader who commanded a majority of votes in the council, and also to dismiss him the moment he ceased to command a majority.'

The most capable Indian administrators I have met are those who have gained their experience in the Native States, which proves the value of responsibility in training men. Some of them are men of the most liberal views, but I doubt whether any of them would think that so drastic a change can be made at one stroke. I think they would say that a Prince who made such a change too quickly would be likely to throw his State into confusion, and thereby delay its progress towards self-government. He would advise

'(1) To make his whole legislative council elective.

'(2) To undertake to appoint as Diwan the leader who commanded a majority of votes in the council, and also to dismiss him the moment he ceased to command a majority.'

The most capable Indian administrators I have met are those who have gained their experience in the Native States, which proves the value of responsibility in training men. Some of them are men of the most liberal views, but I doubt whether any of them would think that so drastic a change can be made at one stroke. I think they would say that a Prince who made such a change too quickly would be likely to throw his State into confusion, and thereby delay its progress towards self-government. He would advise

that several intermediate steps should be taken, and I think he would hesitate to name any exact time within which the final change could be brought about.

Be that as it may, you will now see what I mean when I speak of self-government. To avoid the risk of this misunderstanding it will be better, I suggest, to drop this ambiguous term and to use the words 'responsible government' instead.

§ 21. And now let me ask you to consider this system of responsible government as applied, not to a native state, but to the vast and complicated structure of British India. Here you have two orders of government to deal with, the Government of India and also the various Governments of the provinces into which India is divided. Personally I do not flinch from saying that I look forward to a time when in all these provinces, and also in the capital of India itself, elective legislatures will sit, with executives wholly consisting of the leaders who for the time being command a majority and resign the moment they cease to command it.

May I put the matter in another way. At present the *final* authority in Indian affairs rests not with the Viceroy in Council, nor with the Secretary of State, nor even with Parliament itself, but with the British electorate. In plain words a British election might easily turn on the question of self-government in India. Now in virtue of that final authority, Parliament, the agent of the British electorate, has already delegated certain powers to Indian electorates. It may and, in my opinion, should continue to hand over largely increased powers to Indian electorates. But responsible government means handing over the *final* authority in Indian affairs to the Indian electorate, and that, as I understand these matters, will not be achieved until at the capitals of India and of all its provinces there are parliaments which by their votes can either turn their executives out of office or bring about a general election.

That is the end to which I am looking, and which can, I believe, be attained if the goal is first clearly conceived, if the steps towards it are carefully thought out, if sufficient time is taken in making such steps, and also if each step is taken in time. I should find it difficult to suggest whether India has more to fear from over-haste or procrastination. And this I say, knowing that so wise, experienced, and advanced a democrat as Lord Morley has spoken of that goal as one which may never be reached in India. With all due deference to an authority so weighty I believe that it

that several intermediate steps should be taken, and I think he would hesitate to name any exact time within which the final change could be brought about.

Be that as it may, you will now see what I mean when I speak of self-government. To avoid the risk of this misunderstanding it will be better, I suggest, to drop this ambiguous term and to use the words 'responsible government' instead.

§ 21. And now let me ask you to consider this system of responsible government as applied, not to a native state, but to the vast and complicated structure of British India. May I put the matter in another way. At present the *final* authority in Indian affairs rests not with the Viceroy in Council, nor with the Secretary of State, nor even with Parliament itself, but with the British electorate. In plain words a British election might easily turn on the question of self-government in India. Now in virtue of that final authority, Parliament, the agent of the British electorate, has already delegated certain powers to Indian electorates. It may and, in my opinion, should continue to hand over largely increased powers to Indian electorates. But responsible government means handing over the *final* authority in Indian affairs to the Indian electorate, and that, as I understand these matters, will not be achieved until at the capitals of India and of all its provinces there are parliaments which by their votes can either turn their executives out of office or bring about a general election.

That is the end to which I am looking, and which can, I believe, be attained if the goal is first clearly conceived, if the steps towards it are carefully thought out, if sufficient time is taken in making such steps, and also if each step is taken in time. I should find it difficult to suggest whether India has more to fear from over-haste or procrastination. And this I say, knowing that so wise, experienced, and advanced a democrat as Lord Morley has spoken of that goal as one which may never be reached in India. With all due deference to an authority so weighty I believe that it

can, must, and will be reached, and nothing which I have seen in India has shaken or is likely to shake that faith.

Immediate fulfilment of that project, however, is not the change for which any organized body of Indian opinion is asking at this moment. The reason for this caution on the part of your leaders is, I believe, exactly the same as that which would deter the most liberal statesman to be found in any of the most progressive of the Native States. I think he would say that any attempt to effect such a change too suddenly might lead to a breakdown of the whole machinery so serious that, instead of achieving responsible government, its real achievement would be greatly postponed.

§ 22. This, however, is not the question that I want to discuss now. It is not the question that I came here to examine, and let me say, once for all, that it is not a point upon which I feel that my own opinion is of any particular value. To quote the words of my own letter, the subject of my inquiry is to see 'how India is to be worked into the settlement which ought to follow the war'. For that purpose it is quite sufficient to note that, as a believer in responsible government for India, I have before me two possible alternatives and two only —

(1) That responsible government can be established in one operation, at once.

(2) That responsible government can only be established by a series of changes which will take some time.

I beg you to keep those two alternatives in mind, and to realize the importance of working out the practical consequences of both on the problem before us. Think what that problem is. The British Commonwealth contains upwards of 430,000,000 souls. But the government charged with the defence of this vast world-state is responsible to, and can draw its revenues from, only the 45,000,000 people of the British Isles. Now if the war stopped to-day I believe that the charges on the war-debt would exceed the total revenue of the United Kingdom before the war, which was under £200,000,000. When peace is made it is not unlikely that £300,000,000 per annum will be required to meet the interest and sinking fund on debt, before a shilling is available for the Navy, for the Army, for Public Education, or for all the other departments of government. Realize that for the loan just raised the charges for interest alone will exceed £50,000,000 a year, more than a quarter of the whole national revenue before the war. In addition to all this, vast sums will have to be found as pensions for those

[illegible]

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The dependent variable is "Number of children in the household". The regression equation is:

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.001	0.5	0.617
Gender of the head of household	0.001	0.001	0.5	0.617
Constant	1.000	0.000	1.000	0.000

The regression equation is:
$$\text{Number of children in the household} = 0.001 \times \text{Age of the head of household} + 0.001 \times \text{Gender of the head of household} + 1.000$$

can, must, and will be reached, and nothing which I have seen in India has shaken or is likely to shake that faith.

Immediate fulfilment of that project, however, is not the change for which any organized body of Indian opinion is asking at this moment. The reason for this caution on the part of your leaders is, I believe, exactly the same as that which would deter the most liberal statesman to be found in any of the most progressive of the Native States. I think he would say that any attempt to effect such a change too suddenly might lead to a breakdown of the whole machinery so serious that, instead of achieving responsible government, its real achievement would be greatly postponed.

§ 22. This, however, is not the question that I want to discuss now. It is not the question that I came here to examine, and let me say, once for all, that it is not a point upon which I feel that my own opinion is of any particular value. To quote the words of my own letter, the subject of my inquiry is to see 'how India is to be worked into the settlement which ought to follow the war'. For that purpose it is quite sufficient to note that, as a believer in responsible government for India, I have before me two possible alternatives and two only—

(1) That responsible government can be established in one operation, at once.

(2) That responsible government can only be established by a series of changes which will take some time.

I beg you to keep those two alternatives in mind, and to realize the importance of working out the practical consequences of both on the problem before us. Think what that problem is. The British Commonwealth contains upwards of 430,000,000 souls. But the government charged with the defence of this vast world-state is responsible to, and can draw its revenues from, only the 45,000,000 people of the British Isles. Now if the war stopped to-day I believe that the charges on the war-debt would exceed the total revenue of the United Kingdom before the war, which was under £200,000,000. When peace is made it is not unlikely that £300,000,000 per annum will be required to meet the interest and sinking fund on debt, before a shilling is available for the Navy, for the Army, for Public Education, or for all the other departments of government. Realize that for the loan just raised the charges for interest alone will exceed £50,000,000 a year, more than a quarter of the whole national revenue before the war. In addition to all this, vast sums will have to be found as pensions for those

disabled by wounds, and for the dependents of those who have lost their lives. When peace is restored the situation will be such that no measure of taxation which the wit of government can devise will avail to raise revenue enough from these 45,000,000 souls to provide such armaments as every sane man will agree are essential to the safety of a state including a fourth part of the human race. On the other hand if these revenues are raised from all its 430,000,000 inhabitants there is money enough, and to spare, to provide every possible security which the state needs, and to prevent the recurrence of wars like that which is now devastating the world.

Now why cannot the Imperial Parliament, as at present established, raise that money from the whole Commonwealth? The answer is plain; because it represents only the people of the British Isles, and because in 1778 Parliament pledged itself by solemn statute which provides that 'from and after the passing of this Act the King and Parliament of Great Britain will not impose any Duty, Tax, or Assessment payable in any of His Majesty's Colonies, Provinces, or Plantations in North America or the West Indies'. This statutory pledge has since been interpreted to cover each and every territory which since that time has been added to the King's realms.

We are thus faced by the practical position that the Imperial Parliament can impose no revenues for the common defence outside the British Isles, so long as it remains identical with the British Parliament. It cannot do this, until it becomes a really Imperial Parliament and represents the other countries included in this world-wide Commonwealth.

Now why cannot the present House of Commons be made to represent countries outside the United Kingdom? I have given the answer in Chapter XIV of the *Problem of the Commonwealth*, and I have not seen that any one has yet challenged it. I think you may take it as final and accepted that no country outside the British Isles can be represented in the Parliament which controls the social affairs and local finances of Great Britain. Please read this chapter and examine the question for yourselves; but will you allow me for the present to take it as granted that neither you, nor the Dominions, nor any one else, can be represented on a body which acts as the national and domestic government of the British Isles.

§ 23. Here we come to the root of the whole problem.

disabled by wounds, and for the dependents of those who have lost their lives. When peace is restored the situation will be such that no measure of taxation which the wit of government can devise will avail to raise revenue enough from these 45,000,000 souls to provide such armaments as every sane man will agree are essential to the safety of a state including a fourth part of the human race. On the other hand if these revenues are raised from all its 430,000,000 inhabitants there is money enough, and to spare, to provide every possible security which the state needs, and to prevent the recurrence of wars like that which is now devastating the world.

Now why cannot the Imperial Parliament, as at present established, raise that money from the whole Commonwealth? The answer is plain; because it represents only the people of the British Isles, and because in 1778 Parliament pledged itself by solemn statute which provides that 'from and after the passing of this Act the King and Parliament of Great Britain will not impose any Duty, Tax, or Assessment payable in any of His Majesty's Colonies, Provinces, or Plantations in North America or the West Indies'. This statutory pledge has since been interpreted to cover each and every territory which since that time has been added to the King's realms.

We are thus faced by the practical position that the Imperial Parliament can impose no revenues for the common defence outside the British Isles, so long as it remains identical with the British Parliament. It cannot do this, until it becomes a really Imperial Parliament and represents the other countries included in this world-wide Commonwealth.

Now why cannot the present House of Commons be made to represent countries outside the United Kingdom? I have given the answer in Chapter XIV of the *Problem of the Commonwealth*, and I have not seen that any one has yet challenged it. I think you may take it as final and accepted that no country outside the British Isles can be represented in the Parliament which controls the social affairs and local finances of Great Britain. Please read this chapter and examine the question for yourselves; but will you allow me for the present to take it as granted that neither you, nor the Dominions, nor any one else, can be represented on a body which acts as the national and domestic government of the British Isles.

§ 23. Here we come to the root of the whole problem.

The supreme government of this vast Commonwealth is a duplex government, that is to say, two governments rolled into one. My whole argument, which I ask you to examine on its merits, is that after this war it must be divided into two and so be brought into harmony with the facts. There must be one government for the British Isles responsible for its local domestic affairs, and therefore elected by the British people alone. There must also be another government which has no more to do with the domestic affairs of the British Isles than with those of Canada and Australia, which is responsible for the safety of the Commonwealth as a whole, and upon which its other communities, as well as the British Isles, can be represented.

It is my sincere conviction, though I do not ask you to agree with it, that unless this change is made in the constitution of the British Commonwealth, and made in time, it will perish and with it the hopes of freedom for which it stands, those of India along with the rest. That is my conviction, and I have given some reasons for it in two books; and believing that as I do, I am now trying to see what place India ought to occupy in the new and altered system.

Now suppose that it is really possible to equip India at once with a constitution, the counterpart of that under which the peoples of Canada, Australia, and South Africa govern themselves, the problem upon which I am working is a simple one, and needs no special treatment. But as a political mechanic, who is trying to explore the subject, I am not justified in making that assumption. I must explore the other alternative and see where it leads, and I urge that you will be wise to do the same.

Responsible government means that the final authority in Indian affairs will have been transferred to an Indian Parliament. We are now supposing that India will approach this final transfer by several steps. The nature of those steps and the pace at which each is to be taken can, and should, be freely discussed in India. But the *final* decision as to what they are to be, and how rapidly they can be taken, must of necessity rest with the government outside India, in which the final authority remains, until the transfer is complete and India has assumed the position of a self-governing Dominion. At present that authority rests with the Imperial Parliament, which is also the Parliament of Great Britain. But suppose that, as I have predicted, that duplex Parliament is divided into two, a purely British Parliament upon which no one but the people of Britain

The supreme government of this vast Commonwealth is a duplex government, that is to say, two governments rolled into one. My whole argument, which I ask you to examine on its merits, is that after this war it must be divided into two and so be brought into harmony with the facts. There must be one government for the British Isles responsible for its local domestic affairs, and therefore elected by the British people alone. There must also be another government which has no more to do with the domestic affairs of the British Isles than with those of Canada and Australia, which is responsible for the safety of the Commonwealth as a whole, and upon which its other communities, as well as the British Isles, can be represented.

It is my sincere conviction, though I do not ask you to agree with it, that unless this change is made in the constitution of the British Commonwealth, and made in time, it will perish and with it the hopes of freedom for which it stands, those of India along with the rest. That is my conviction, and I have given some reasons for it in two books; and believing that as I do, I am now trying to see what place India ought to occupy in the new and altered system.

Now suppose that it is really possible to equip India at once with a constitution, the counterpart of that under which the peoples of Canada, Australia, and South Africa govern themselves, the problem upon which I am working is a simple one, and needs no special treatment. But as a political mechanic, who is trying to explore the subject, I am not justified in making that assumption. I must explore the other alternative and see where it leads, and I urge that you will be wise to do the same.

Responsible government means that the final authority in Indian affairs will have been transferred to an Indian Parliament. We are now supposing that India will approach this final transfer by several steps. The nature of those steps and the pace at which each is to be taken can, and should, be freely discussed in India. But the *final* decision as to what they are to be, and how rapidly they can be taken, must of necessity rest with the government outside India, in which the final authority remains, until the transfer is complete and India has assumed the position of a self-governing Dominion. At present that authority rests with the Imperial Parliament, which is also the Parliament of Great Britain. But suppose that, as I have predicted, that duplex Parliament is divided into two, a purely British Parliament upon which no one but the people of Britain

can be represented, and a true Imperial Parliament upon which the other communities of the Commonwealth can find a place. Which of those two bodies do you think should decide how fast India is to travel towards responsible government?

In *The Problem of the Commonwealth* I have argued that, in the nature of things, that decision must rest with the Imperial Parliament. I did so because every man who had sat on the Cabinet to whom I had access told me that an Imperial Cabinet could not control foreign affairs unless it included the Secretary of State for India. I laid great stress on the point, just because I knew that this involved consequences distasteful not only to the people of India, but also to those of the Dominions. I thought, and think, that I was right in this; but I have so often been wrong that I am quite prepared to believe that I may be mistaken in this also. For the purpose of our present discussion let us assume that I was mistaken and that whether the Secretary of State for India is to be answerable to the domestic Parliament of the United Kingdom or to an Imperial Parliament is purely a matter of option.

Now which would you choose? In making this choice it will help if we try to picture the two governments between which your choice is to lie.

In the purely British Parliament, elected to deal with the domestic affairs of the British Isles and to vote revenues which are purely British, we can say with practical certainty that your representatives can find no place.

With an Imperial Parliament, which has nothing to do with the domestic affairs of the British Isles, it is otherwise. The whole point of calling such a parliament into being is that the other communities of the Commonwealth, as well as Britain, can be represented upon it. Now the only point in which my letter differed from my published books was this, that I was telling my friends that I was now convinced that India must be represented on that body. After a longer stay in India I am prepared to go further still. I now think that the Imperial Parliament should include an Upper as well as a Lower House. I think that the Upper House should bear to the Lower a relation similar to, though not exactly the same as, that which the House of Lords bears to the House of Commons since the passing of the Parliament Act. As to the representation of India in both those Houses, the appointment of His Highness the Maharajah of Bikaner to represent the Princes of India at the

can be represented, and a true Imperial Parliament upon which the other communities of the Commonwealth can find a place. Which of those two bodies do you think should decide how fast India is to travel towards responsible government?

In *The Problem of the Commonwealth* I have argued that, in the nature of things, that decision must rest with the Imperial Parliament. I did so because every man who had sat on the Cabinet to whom I had access told me that an Imperial Cabinet could not control foreign affairs unless it included the Secretary of State for India. I laid great stress on the point, just because I knew that this involved consequences distasteful not only to the people of India, but also to those of the Dominions. I thought, and think, that I was right in this; but I have so often been wrong that I am quite prepared to believe that I may be mistaken in this also. For the purpose of our present discussion let us assume that I was mistaken and that whether the Secretary of State for India is to be answerable to the domestic Parliament of the United Kingdom or to an Imperial Parliament is purely a matter of option.

Now which would you choose? In making this choice it will help if we try to picture the two governments between which your choice is to lie.

In the purely British Parliament, elected to deal with the domestic affairs of the British Isles and to vote revenues which are purely British, we can say with practical certainty that your representatives can find no place.

With an Imperial Parliament, which has nothing to do with the domestic affairs of the British Isles, it is otherwise. The whole point of calling such a parliament into being is that the other communities of the Commonwealth, as well as Britain, can be represented upon it. Now the only point in which my letter differed from my published books was this, that I was telling my friends that I was now convinced that India must be represented on that body. After a longer stay in India I am prepared to go further still. I now think that the Imperial Parliament should include an Upper as well as a Lower House. Abstract

1. *Journal of the American Medical Association*, 2000; 283: 2689-2693.

present Imperial Conference, and of Sir S. Sinha, has created a precedent which will, I believe, never be reversed.

Assuming then that the Imperial Parliament is to include two houses, I will deal with the Upper Chamber first. I suggest that we want such an Upper House in order to give a voice to certain interests which could not be represented in a purely elective chamber vested with power to turn the Imperial Government out of office.

Let me point to two such interests. Of the total population of India a quarter, I think, are in Native States and nearly a quarter are followers of Islam. The Native States, no less than the Dominions, are committed to peace and war by the decisions of the Imperial Government. I submit that their princes should have a voice in the counsels which lead to such decisions. There is no more difficulty in representing them on the Upper House of a real Imperial Parliament, than there was in representing the Scottish and Irish Peers in the House of Lords. And then there are the followers of Islam, not only in India but also outside it. Turkey contains less than 20,000,000 Moslems. India alone contains 66,000,000, while Egypt and Central Africa must include some 34,000,000 more, making in all at least 100,000,000 followers of Islam. The majority of Moslems are in fact citizens of the British Commonwealth, although the principal centres and authorities of their faith are outside its limits. The result, as this war has shown, is that foreign relations affect the Moslem community at a sensitive point and in various ways as they affect no other important section of British subjects. Surely it would greatly add to the strength of this Commonwealth if this vast cosmic community could feel that when foreign affairs were under discussion their views were voiced by spokesmen of their own faith.

Here, then, are two great interests, the Native States and the great Islamic community, a place for whose spokesmen could be found in an Upper Chamber, such as could scarcely be found in a Lower House which must be a purely elective assembly.

Before leaving the Upper House I want also to suggest that, according to all precedent, its members would be eligible for office in the Ministry itself.

Now let us come to the Lower House, which must, I assume, be wholly elective. I am still within the limit of views which I am not likely to alter, in recording my personal opinion that elected representatives of India—by

present Imperial Conference, and of Sir S. Sinha, has created a precedent which will, I believe, never be reversed.

Assuming then that the Imperial Parliament is to include two houses, I will deal with the Upper Chamber first. I suggest that we want such an Upper House in order to give a voice to certain interests which could not be represented in a purely elective chamber vested with power to turn the Imperial Government out of office.

Let me point to two such interests. Of the total population of India a quarter, I think, are in Native States and nearly a quarter are followers of Islam. The Native States, no less than the Dominions, are committed to peace and war by the decisions of the Imperial Government. I submit that their princes should have a voice in the counsels which lead to such decisions. There is no more difficulty in representing them on the Upper House of a real Imperial Parliament, than there was in representing the Scottish and Irish Peers in the House of Lords. And then there are the followers of Islam, not only in India but also outside it. Turkey contains less than 20,000,000 Moslems. India alone contains 66,000,000, while Egypt and Central Africa must include some 34,000,000 more, making in all at least 100,000,000 followers of Islam. The majority of Moslems are in fact citizens of the British Commonwealth, although the principal centres and authorities of their faith are outside its limits. The result, as this war has shown, is that foreign relations affect the Moslem community at a sensitive point and in various ways as they affect no other important section of British subjects. Surely it would greatly add to the strength of this Commonwealth if this vast cosmic community could feel that when foreign affairs were under discussion their views were voiced by spokesmen of their own faith.

Here, then, are two great interests, the Native States and the great Islamic community, a place for whose spokesmen could be found in an Upper Chamber, such as could scarcely be found in a Lower House which must be a purely elective assembly.

Before leaving the Upper House I want also to suggest that, according to all precedent, its members would be eligible for office in the Ministry itself.

Now let us come to the Lower House, which must, I assume, be wholly elective. I am still within the limit of views which I am not likely to alter, in recording my personal opinion that elected representatives of India—by

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Abstract—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders among different types of workers. The study included 600 employees from three companies who performed different types of work. The results showed that the prevalence of musculoskeletal disorders was higher among workers performing manual labor than among those performing office or service work.

which I must not be taken necessarily to mean representatives of the present Indian electorate should sit in that House also. As to the basis upon which the various communities of this vast Commonwealth should be represented in the Lower House, I have no views to offer at present. It belongs to a field which I have not as yet explored, and a student is not called upon to offer opinions upon a part of his subject until he has carefully examined it. I have often been criticized for publishing opinions upon any section of this whole problem before I had worked out every detail of every part of it. My excuse is that the subject is too vast, and events are moving too quickly, for such treatment. I am trying to do my best under the difficult conditions imposed by these times, and, therefore, I ask your indulgence for offering opinions on some things before I am able to suggest solutions of others.

So far, however, I am able to go. I believe that the Imperial Parliament should consist of two Houses, that India should have her spokesmen on both; and this consequence would, I believe, of necessity follow, that those spokesmen would be eligible for seats in the Ministry.

§ 24. Let us now summarize our results. The questions which most deeply affect India are these—

(1) By what steps should she reach responsible government?

(2) How fast can those steps be taken?

The final decision on such questions must rest with one of two authorities, either—

I. A government which can be answerable only to the people of the British Isles, or

II. A Government which can be made answerable to all the communities of the British Commonwealth and therefore one which, as I personally hope and believe, will contain Indians authorized to voice the wishes of her people.

Upon which of these two authorities would you wish these final decisions to rest, until they are made, and the need for making such decisions has ceased? And in making your choice it is well that you should realize that the English members of Parliament upon whose sympathy you have learned to count are just as likely to seek election to the Imperial Parliament as to the new Parliament created to deal with the local affairs of the British Isles. If the Imperial Parliament continued to deal with India, I believe, that nearly all of them would seek election to that body. The vital point, however, is that the Imperial Parliament could

include members directly answerable to yourselves. The local Parliament of the British Isles could not.

§ 25. It is difficult to conceive a question more important to Indians at the present juncture of affairs, and for their judgement upon it to be clouded by the passions excited in this controversy would be nothing short of a disaster. We are living in times when events are forcing decisions upon us. They punish our delays, and if we quarrel and hesitate, when we ought to be thinking, resolving and acting, events will rule those decisions over our heads. We have then to accept the punishment with the decision, as has happened in the case of compulsory service. Our only safety lies in grasping the issues at stake. I am sorry to have caused a personal controversy which is threatening to cloud such issues just now, when counsels that are calm and clear, insight and mutual good will are the first necessities of the time. I greatly desire to end this controversy. It can hurt me but little, and would not matter if it hurt me much. But to public interests it may do grave and permanent mischief, if suffered to obscure questions which can only be settled aright so far as they are clearly understood. A controversy which has raised such passions cannot be closed by allowing it to die; for in dying it leaves the mind of the public strewn with untruths, which presently spring to life in a harvest of thorns. The best that I can do, therefore, is to tell the truth patiently and in detail from beginning to end. And in doing so I have tried not to spare my own mistakes; for why should one do otherwise? Avoidance of errors is the privilege of those who walk by paths paved with precedents. Such avoidance is at best 'a fugitive and cloistered virtue'. Untravelled paths are traced only by those who attempt many in vain, recognize their mistakes, turn back, and try others anew. You who are now committed to fields which are strange to you will learn to regard your own mistakes as your fastest friends and your truest guides. Never disown them. Call them by their name. Understand and consult them. Your achievements you can leave to speak for themselves.

And in noting mistakes, others, as well as my own, I have tried, so far as in me lies, not to answer blame with blame. 'Why', it was once asked, 'do we so freely arrogate to ourselves God's prerogative of blame, and so neglect man's privilege of pity?' It were well for the world if that question were written at the head of every leading article, above the title of every book, across the chair of every

Government. Also adopted by the All-India Muslim Leagu
its Meeting held on the 31st December, 1916.*

RESOLUTION

(a) That having regard to the fact that the great communities
India are the inheritors of ancient civilizations and have sh
great capacity for government and administration, and to
progress in education and public spirit made by them during a
tury of British Rule, and further having regard to the fact that
present system of Government does not satisfy the legitimate as
tions of the people and has become unsuited to existing condit

public assembly and, better still, in the hearts of To apportion blame is a fruitless task, but never more in times which are calling the humblest to rise to the of their greatness. The world is in throes which pre creation or death. Our whole race has outgrown the national State, and as surely as day follows night or night day, will pass either to a Commonwealth of nations or to an empire of slaves. And the issue of these agonies, with us, in which word I include yourselves. Your freedom is at stake, the freedom not merely of this Commonwealth, but that of the World. With us it rests to destroy by our own ignorance and divisions, or else to renew enlarge it by such unity in counsel and action as profound knowledge, a fuller understanding of and greater affection for each other alone can bring.

Let us leave this talk of conspiracies and think not each other and less of ourselves. And thus I would urge my own countrymen, no less than on my fellow citizen India. With inveterate foes thundering at our gates, scarcely the time for the nations of this Commonwealth to harbour unworthy suspicions of each other. And when peace returns and the time has come to repair its breach to widen its walls and extend the freedom they get within, let us then remember the words in which Parliament of old has been wont to address the King 'that Majesty may ever be pleased to put the best construction on all their words and acts'. Now, and also in the time to come, let us deal with each other in the spirit of that prayer

APPENDIX

THE CONGRESS LEAGUE SCHEME

RESOLUTION adopted by the Thirty-First Session of the Indian National Congress held at Lucknow on the 20th December, 1916, outlining a Scheme of Reforms as a Definite Step towards a Government. Also adopted by the All-India Muslim League at its Meeting held on the 31st December, 1916.

RESOLUTION

(a) That having regard to the fact that the great communities of India are the inheritors of ancient civilizations and have shown great capacity for government and administration, and to the progress in education and public spirit made by them during a century of British Rule, and further having regard to the fact that the present system of Government does not satisfy the legitimate aspirations of the people and has become unsuited to existing conditions

and requirements, the Congress is of opinion that the time has come when His Majesty the King-Emperor should be pleased to issue a Proclamation announcing that it is the aim and intention of British policy to confer Self-Government on India at an early date.

(b) That this Congress demands that a definite step should be taken towards Self-Government by granting the reforms contained in the scheme prepared by the All-India Congress Committee in concert with the Reform Committee appointed by the All-India Muslim League (*detailed below*).

(c) That in the reconstruction of the Empire, India shall be lifted from the position of a Dependency to that of an equal partner in the Empire with the self-governing Dominions.

REFORM SCHEME

I. Provincial Legislative Councils

1. Provincial Legislative Councils shall consist of four-fifths elected and of one-fifth nominated members.

2. Their strength shall be not less than 125 members in the major provinces, and from 50 to 75 in the minor provinces.

3. The members of Councils should be elected directly by the people on as broad a franchise as possible.

4. Adequate provision should be made for the representation of important minorities by election, and the Mohammedans should be represented through special electorates on the Provincial Legislative Councils in the following proportions :

PUNJAB—One-half of the elected Indian Members.

UNITED PROVINCES—30 per cent. " "

BENGAL—40 per cent. " "

BEHAR—25 per cent. " "

CENTRAL PROVINCES—15 per cent. " "

MADRAS—15 per cent. " "

BOMBAY—One-third " "

Provided that no Mohammedan shall participate in any of the other elections to the Imperial or Provincial Legislative Councils, save and except those by electorates representing special interests.

Provided further that no bill, nor any clause thereof, nor a resolution introduced by a non-official member affecting one or the other community, which question is to be determined by the members of that community in the Legislative Council concerned, shall be proceeded with, if three-fourths of the members of that community in the particular Council, Imperial or Provincial, oppose the bill or any clause thereof or the resolution.¹

5. The head of the Provincial Government should not be the President of the Legislative Council, but the Council should have the right of electing its President.

¹ Clause 4 is now usually referred to as 'the Lucknow Compact'.

and requirements, the Congress is of opinion that the time has come when His Majesty the King-Emperor should be pleased to issue a Proclamation announcing that it is the aim and intention of British policy to confer Self-Government on India at an early date.

(b) That this Congress demands that a definite step should be taken towards Self-Government by granting the reforms contained in the scheme prepared by the All-India Congress Committee in concert with the Reform Committee appointed by the All-India Muslim League (*detailed below*).

(c) That in the reconstruction of the Empire, India shall be lifted from the position of a Dependency to that of an equal partner in the Empire with the self-governing Dominions.

REFORM SCHEME

I. Provincial Legislative Councils

1. Provincial Legislative Councils shall consist of four-fifths elected and of one-fifth nominated members.

2. Their strength shall be not less than 125 members in the major provinces, and from 50 to 75 in the minor provinces.

3. The members of Councils should be elected directly by the people on as broad a franchise as possible.

4. Adequate provision should be made for the representation of important minorities by election, and the Mohammedans should be represented through special electorates on the Provincial Legislative Councils in the following proportions :

PUNJAB—One-half of the elected Indian Members.

UNITED PROVINCES—30 per cent. " "

BENGAL—40 per cent. " "

BEHAR—25 per cent. " "

CENTRAL PROVINCES—15 per cent. " "

MADRAS—15 per cent. " "

BOMBAY—One-third " "

Provided that no Mohammedan shall participate in any of the other elections to the Imperial or Provincial Legislative Councils, save and except those by electorates representing special interests.

Provided further that no bill, nor any clause thereof, nor a resolution introduced by a non-official member affecting one or the other community, which question is to be determined by the members of that community in the Legislative Council concerned, shall be proceeded with, if three-fourths of the members of that community in the particular Council, Imperial or Provincial, oppose the bill or any clause thereof or the resolution.¹

5. The head of the Provincial Government should not be the President of the Legislative Council, but the Council should have the right of electing its President.

¹ Clause 4 is now usually referred to as 'the Lucknow Compact'.

6. The right of asking supplementary questions should not be restricted to the member putting the original question, but should be allowed to be exercised by any other member.

7. (a) Except customs, post, telegraph, mint, salt, opium, railways, army, and navy and tributes from Indian States, all other sources of revenue should be Provincial.

(b) There should be no divided heads of revenue. The Government of India should be provided with fixed contributions from the Provincial Governments, such fixed contributions being liable to revision when extraordinary and unforeseen contingencies render such revision necessary.

(c) The Provincial Council should have full authority to deal with all matters affecting the internal administration of the province including the power to raise loans, to impose and alter taxation, and to vote on the Budget. All items of expenditure, and all proposals concerning ways and means for raising the necessary revenue, should be embodied in Bills and submitted to the Provincial Council for adoption.

(d) Resolutions on all matters within the purview of the Provincial Government should be allowed for discussion in accordance with rules made in that behalf by the Council itself.

(e) A resolution passed by the Provincial Legislative Council shall be binding on the Executive Government, unless vetoed by the Governor in Council, provided however that if the resolution is again passed by the Council after an interval of not less than one year, it must be given effect to.

(f) A motion for adjournment may be brought forward for the discussion of a definite matter of urgent public importance, if supported by not less than one-eighth of the members present.

8. A special meeting of the Provincial Council may be summoned on a requisition by not less than one-eighth of the members.

9. A Bill, other than a Money Bill, may be introduced in Council in accordance with rules made in that behalf by the Council itself, and the consent of the Government should not be required therefor.

10. All Bills passed by Provincial Legislatures shall have to receive the assent of the Governor before they become law, but may be vetoed by the Governor-General.

11. The term of office of the members shall be five years.

II.—Provincial Governments

1. The head of every Provincial Government shall be a Governor who shall not ordinarily belong to the Indian Civil Service or any of the permanent services.

2. There shall be in every Province an Executive Council which,

6. The right of asking supplementary questions should not be restricted to the member putting the original question, but should be allowed to be exercised by any other member.

7. (a) Except customs, post, telegraph, mint, salt, opium, railways, army, and navy and tributes from Indian States, all other sources of revenue should be Provincial.

(b) There should be no divided heads of revenue. The Government of India should be provided with fixed contributions from the Provincial Governments, such fixed contributions being liable to revision when extraordinary and unforeseen contingencies render such revision necessary.

(c) The Provincial Council should have full authority to deal with all matters affecting the internal administration of the province including the power to raise loans, to impose and alter taxation, and to vote on the Budget. (e) A resolution passed by the Provincial Legislative Council shall be binding on the Executive Government, unless vetoed by the Governor in Council, provided however that if the resolution is again passed by the Council after an interval of not less than one year, it must be given effect to.

(f) A motion for adjournment may be brought forward for the discussion of a definite matter of urgent public importance, if supported by not less than one-eighth of the members present.

8. A special meeting of the Provincial Council may be summoned on a requisition by not less than one-eighth of the members.

9. A Bill, other than a Money Bill, may be introduced in Council in accordance with rules made in that behalf by the Council itself, and the consent of the Government should not be required therefor.

10. All Bills passed by Provincial Legislatures shall have to receive the assent of the Governor before they become law, but may be vetoed by the Governor-General.

11. The term of office of the members shall be five years.

II.—Provincial Governments

1. The head of every Provincial Government shall be a Governor who shall not ordinarily belong to the Indian Civil Service or any of the permanent services.

2. There shall be in every Province an Executive Council which,

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and the role of the accounting system in providing reliable financial information.
2. It then outlines the various components of the accounting system, including the general ledger, subsidiary ledgers, and the trial balance.
3. The document also covers the process of journalizing transactions and the importance of double-entry bookkeeping.
4. Finally, it discusses the preparation of financial statements, including the income statement, balance sheet, and statement of cash flows.
5. The document concludes by emphasizing the need for ongoing monitoring and evaluation of the accounting system to ensure its effectiveness and accuracy.

with the Governor, shall constitute the Executive Government of the Province.

3. Members of the Indian Civil Service shall not ordinarily be appointed to the Executive Councils.

4. Not less than one-half of the members of the Executive Council shall consist of Indians to be elected by the elected members of the Provincial Legislative Council.

5. The term of office of the members shall be five years.

III. -- Imperial Legislative Council

1. The strength of the Imperial Legislative Council shall be 150.

2. Four-fifths of the members shall be elected.

3. The franchise for the Imperial Legislative Council should be widened as far as possible on the lines of electorates for Mohammedans for the Provincial Legislative Councils, *and the elected members of the Provincial Legislative Councils should also form an electorate for the return of members to the Imperial Legislative Council.*

4. One-third of the Indian elected members should be Mohammedans elected by separate Mohammedan electorates in the several Provinces, in the proportion, as nearly as may be, in which they are represented on the Provincial Legislative Councils by separate Mahommedan electorates.

Vide provisos to section I, clause 4.

5. The President of the Council shall be elected by the Council itself.

6. The right of asking supplementary questions shall not be restricted to the member putting the original question but should be allowed to be exercised by any other member.

7. A special meeting of the Council may be summoned on a requisition by not less than one-eighth of the members.

8. A Bill, other than a Money Bill, may be introduced in Council in accordance with rules made in that behalf by the Council itself, and the consent of the Executive Government should not be required therefor.

9. All Bills passed by the Council shall have to receive the assent of the Governor-General before they become law.

10. All financial proposals relating to sources of income and items of expenditure shall be embodied in Bills. Every such Bill and the Budget as a whole shall be submitted for the vote of the Imperial Legislative Council.

11. The term of office of members shall be five years.

12. The matters mentioned hereinbelow shall be exclusively under the control of the Imperial Legislative Council :

(a) Matters in regard to which uniform legislation for the whole of India is desirable.

(b) Provincial legislation in so far as it may affect interprovincial fiscal relations.

The first of these is the fact that the United States is a young country. It has only been about 150 years since it was founded. This means that it has not had time to develop a long and rich history. The second is the fact that the United States is a large country. It covers a vast area of land, and this means that it has a wide variety of landscapes and climates. The third is the fact that the United States is a diverse country. It is home to people from many different backgrounds and cultures.

THE HISTORY OF THE UNITED STATES

The history of the United States is a story of growth and change. It begins with the first people to live on the continent, the Native Americans. These people lived in small, nomadic groups and were skilled hunters and farmers. They were the first to settle the land, and their culture and way of life were the foundation of the United States. The next stage in the history of the United States was the arrival of European settlers. These settlers came from many different countries, including England, France, and Spain. They brought with them new ideas, technologies, and ways of life. The United States grew from a small colony into a large, independent nation.

The United States has a long and rich history, and it is a country that has made many contributions to the world. It is a country that has been the source of many great ideas, inventions, and achievements. The United States is a country that has grown from a small colony into a large, independent nation. It is a country that has made many contributions to the world, and it is a country that is proud of its history and its future.

The United States is a country that has made many contributions to the world. It is a country that has grown from a small colony into a large, independent nation. 7. A special meeting of the Council may be summoned on a requisition by not less than one-eighth of the members.

8. A Bill, other than a Money Bill, may be introduced in Council in accordance with rules made in that behalf by the Council itself, and the consent of the Executive Government should not be required therefor.

9. All Bills passed by the Council shall have to receive the assent of the Governor-General before they become law.

10. All financial proposals relating to sources of income and items of expenditure shall be embodied in Bills. Every such Bill and the Budget as a whole shall be submitted for the vote of the Imperial Legislative Council.

11. The term of office of members shall be five years.

12. The matters mentioned hereinbelow shall be exclusively under the control of the Imperial Legislative Council :

(a) Matters in regard to which uniform legislation for the whole of India is desirable.

(b) Provincial legislation in so far as it may affect interprovincial fiscal relations.

- (c) Questions affecting purely Imperial Revenue, excepting tributes from Indian States.
- (d) Questions affecting purely Imperial Expenditure, except that no resolution of the Imperial Legislative Council shall be binding on the Governor-General in Council in respect of military charges for the defence of the country.
- (e) The right of revising Indian tariffs and customs-duties, of imposing, altering, or removing any tax or cess, modifying the existing system of currency and banking, and granting any aids or bounties to any or all deserving and nascent industries of the country.
- (f) Resolutions on all matters relating to the administration of the country as a whole.

13. A Resolution passed by the Legislative Council should be binding on the Executive Government, unless vetoed by the Governor-General in Council: provided, however, that if the resolution is again passed by the Council after an interval of not less than one year, it must be given effect to.

14. A motion for adjournment may be brought forward for the discussion of a definite matter of urgent public importance, if supported by not less than one-eighth of the members present.

15. When the Crown chooses to exercise its powers of veto in regard to a Bill passed by a Provincial Legislative Council or by the Imperial Legislative Council, it should be exercised within twelve months from the date on which it is passed, and the Bill shall cease to have effect as from the date on which the fact of such veto is made known to the Legislative Council concerned.

16. The Imperial Legislative Council shall have no power to interfere with the Government of India's direction of the military affairs and the foreign and political relations of India, including the declaration of war, the making of peace and the entering into treaties.

IV.—The Government of India

1. The Governor-General of India will be the head of the Government of India.

2. He will have an Executive Council, half of whom shall be Indians.

3. The Indian members should be elected by the elected members of the Imperial Legislative Council.

4. Members of the Indian Civil Service shall not ordinarily be appointed to the Executive Council of the Governor-General.

5. The power of making all appointments in the Imperial Civil Services shall vest in the Government of India, as constituted under this scheme, due regard being paid to existing interests, subject to any laws that may be made by the Imperial Legislative Council.

6. The Government of India shall not ordinarily interfere in the local affairs of a province, and powers not specially given to

- (c) Questions affecting purely Imperial Revenue, excepting tributes from Indian States.
- (d) Questions affecting purely Imperial Expenditure, except that no resolution of the Imperial Legislative Council shall be binding on the Governor-General in Council in respect of military charges for the defence of the country.

13. A Resolution passed by the Legislative Council should be binding on the Executive Government, unless vetoed by the Governor-General in Council: provided, however, that if the resolution is again passed by the Council after an interval of not less than one year, it must be given effect to.

14. A motion for adjournment may be brought forward for the discussion of a definite matter of urgent public importance, if supported by not less than one-eighth of the members present.

15. When the Crown chooses to exercise its powers of veto in regard to a Bill passed by a Provincial Legislative Council or by the Imperial Legislative Council, it should be exercised within twelve months from the date on which it is passed, and the Bill shall cease to have effect as from the date on which the fact of such veto is made known to the Legislative Council concerned.

16. The Imperial Legislative Council shall have no power to interfere with the Government of India's direction of the military affairs and the foreign and political relations of India, including the declaration of war, the making of peace and the entering into treaties.

IV.—The Government of India

1. The Governor-General of India will be the head of the Government of India.

2. He will have an Executive Council, half of whom shall be Indians.

3. The Indian members should be elected by the elected members of the Imperial Legislative Council.

4. Members of the Indian Civil Service shall not ordinarily be appointed to the Executive Council of the Governor-General.

5. The power of making all appointments in the Imperial Civil Services shall vest in the Government of India, as constituted under this scheme, due regard being paid to existing interests, subject to any laws that may be made by the Imperial Legislative Council.

6. The Government of India shall not ordinarily interfere in the local affairs of a province, and powers not specially given to

Provincial Government, shall be deemed to be vested in the former. The authority of the Government of India will ordinarily be limited to general supervision and superintendence over the Provincial Governments.

7. In legislative and administrative matters the Government of India, as constituted under this scheme, shall, as far as possible, be independent of the Secretary of State.

8. A system of independent audit of the accounts of the Government of India should be instituted.

V. — The Secretary of State in Council

1. The Council of the Secretary of State for India should be abolished.

2. The salary of the Secretary of State should be placed on the British Estimates.

3. The Secretary of State should, as far as possible, occupy the same position in relation to the Government of India, as the Secretary of State for the Colonies does in relation to the Governments of the self-governing Dominions.

4. The Secretary of State for India should be assisted by two Permanent Under-Secretaries, one of whom should always be an Indian.

VI. India and the Empire

1. In any Council or other body which may be constituted or convened for the settlement or control of Imperial affairs, India shall be adequately represented in like manner with the Dominions and with equal rights.

2. Indians should be placed on a footing of equality in respect of status and rights of citizenship with other subjects of His Majesty the King throughout the Empire.

VII.—Military and other matters

1. The military and naval service of His Majesty, both in their commissioned and non-commissioned ranks, should be thrown open to Indians and adequate provision should be made for their selection, training, and instruction in India.

2. Indians should be allowed to enlist as volunteers.

3. Executive Officers in India shall have no judicial powers entrusted to them, and the judiciary in every province shall be placed under the highest Court of that province.

A LETTER TO THE HON. BABU BHUPENDRA NATH BASU

(AN EXPERIMENT IN THE APPLICATION OF THE PRINCIPLE OF
DYARCHY TO THE GOVERNMENT OF THE UNITED PROVINCES)

PREFATORY NOTE¹

The study of Indian conditions contained in this pamphlet has been compiled in order to obtain the considered criticism of friends with whom I have discussed the subject with which it deals. I should be glad if corrections and criticisms can be noted on the blank pages opposite the text to which they refer *in clearly legible writing*.

The criticism need not be signed. If signed I shall treat the signature as absolutely confidential. Where the criticism is unsigned, I should be glad if the writer would describe himself in general terms, stating—

- (1) Whether he is a European or an Indian.
- (2) Whether he is a member of a public body or of the public service, and adding any other particulars showing the angle from which he views the question.

In working out my final results I should like to be free to quote these descriptions, if I have occasion to quote an opinion ; but critics will kindly state if they do not wish this to be done. If, however, I quote an opinion in no case shall I reveal the identity of the author, where that identity is made known to me. These conditions will, I think, enable criticism to be given without reserve.

Kindly forward your criticisms at your earliest convenience to the undersigned—

LIONEL CURTIS,

c/o MESSRS. A. H. WHEELER & Co.,

EMILY COTTAGE,
NAINI TAL, U.P.

April 6, 1917.

To

THE HON. BABU BHUPENDRA NATH BASU,
TEMPLE CHAMBERS, CALCUTTA.

DEAR MR. BHUPENDRA NATH BASU,

§ 1. With reference to the last paragraph in your letter of March 29, let me say that the subject which I am trying to study is the relation of India to the rest of the Empire—the place which India ought to occupy in a reconstructed Commonwealth after the war. I began, as you know, by studying the relations of the self-governing Dominions to the rest of the Commonwealth and have published certain conclusions on the subject. This part of the problem is comparatively simple because the Dominions are, so far as their national affairs are concerned, like separate clocks each with their own mainspring in themselves. It is possible, therefore, to consider their future place in the larger mechanism of the whole Commonwealth without reference to any changes in their own internal structure. India, on the other hand, has not as yet attained this domestic independence, though there are an increasing number of Indians who desire to attain it. At present the mainspring of your domestic government is closely connected and, in fact, identical with the mainspring which works the mechanism of the Commonwealth as a whole. This mainspring is the Imperial Parliament. Hence it is impossible to study any change in the mechanism of the Imperial Government without reference to the effect that such changes would have on the internal government of India. Herein lies the greatest difficulty which the student of the subject has to face.

§ 2. It is important to note, however, that the converse proposition is equally true. You can scarcely afford to consider plans for changing the system of government in India without reference to the external mechanism by which those internal changes must be effected. Have you

April 6, 1917.

To

THE HON. BABU BHUPENDRA NATH BASU,
TEMPLE CHAMBERS, CALCUTTA.

DEAR MR. BHUPENDRA NATH BASU,

§ 1. With reference to the last paragraph in your letter of March 29, let me say that the subject which I am trying to study is the relation of India to the rest of the Empire—the place which India ought to occupy in a reconstructed Commonwealth after the war. I began, as you know, by studying the relations of the self-governing Dominions to the rest of the Commonwealth and have published certain conclusions on the subject. This part of the problem is comparatively simple because the Dominions are, so far as their national affairs are concerned, like separate clocks each with their own mainspring in themselves. It is possible, therefore, to consider their future place in the larger mechanism of the whole Commonwealth without reference to any changes in their own internal structure. India, on the other hand, has not as yet attained this domestic independence, though there are an increasing number of Indians who desire to attain it. At present the mainspring of your domestic government is closely connected and, in fact, identical with the mainspring which works the mechanism of the Commonwealth as a whole. This mainspring is the Imperial Parliament. Hence it is impossible to study any change in the mechanism of the Imperial Government without reference to the effect that such changes would have on the internal government of India. Herein lies the greatest difficulty which the student of the subject has to face.

§ 2. It is important to note, however, that the converse proposition is equally true. You can scarcely afford to consider plans for changing the system of government in India without reference to the external mechanism by which those internal changes must be effected. Have you

considered how far this mechanism, as at present constituted, is suitable for your purpose? Most Indians with whom I have talked are conscious of its weakness. They justly complain that since the abolition of the Company Parliament has paid the scantiest attention to Indian affairs. In the Company's days its Charter came up for renewal every twenty years. At these periods the administration of the Company became the subject of direct inquiry, not through a Royal Commission, but by Parliament itself, through a Parliamentary Committee. Such inquiries occupied years, with the result that the Members of Parliament who took part in them obtained a considerable knowledge of Indian affairs. Powerful friends of India, like Burke, were a product of the system and such men were able to develop in England a public opinion and an Indian policy adequate to the needs of the time. It was mainly through this agency that the British mind was gradually educated to the idea that the interests of Indians ought to be the actuating principle of British policy in India. The modern substitutes for these parliamentary committees are inquiries held by such bodies as the Decentralization Commission and the Public Services Commission, upon which but few Members of Parliament find a place. I think you will agree that while the old parliamentary committees had an immense effect on British public opinion, the modern commission has comparatively little.

§ 3. The neglect of India by Members of Parliament for the last two generations is more due to a change of conditions than to any change for the worse in men. The truth is that since the middle of the nineteenth century the growing complication of social and industrial questions in the British Isles has overwhelmed the Imperial Government with business at its doors, which is too great for any one body to handle. If you will glance at countries like America, Germany, Canada, Australia, and South Africa, you will easily see why this is so. America with its population of one hundred millions transacts its business through no less than forty-nine governments, national and provincial; Germany with sixty-eight millions has over thirty such governments; Canada with eight millions has nine; Australia with five millions has seven; and South Africa with six millions has five. The United Kingdom with its forty-five millions has but one, and that Government has also to control interests common to peoples including more than a quarter of the human race, who are scattered over

considered how far this mechanism, as at present constituted, is suitable for your purpose? Most Indians with whom I have talked are conscious of its weakness. They justly complain that since the abolition of the Company Parliament has paid the scantiest attention to Indian affairs. In the Company's days its Charter came up for renewal every twenty years. At these periods the administration of the Company became the subject of direct inquiry, not through a Royal Commission, but by Parliament itself, through a Parliamentary Committee. Such inquiries occupied years, with the result that the Members of Parliament who took part in them obtained a considerable knowledge of Indian affairs. Powerful friends of India, like Burke, were a product of the system and such men were able to develop in England a public opinion and an Indian policy adequate to the needs of the time. It was mainly through this agency that the British mind was gradually educated to the idea that the interests of Indians ought to be the actuating principle of British policy in India. The modern substitutes for these parliamentary committees are inquiries held by such bodies as the Decentralization Commission and the Public Services Commission, upon which but few Members of Parliament find a place. I think you will agree that while the old parliamentary committees had an immense effect on British public opinion, the modern commission has comparatively little.

§ 3. The neglect of India by Members of Parliament for the last two generations is more due to a change of conditions than to any change for the worse in men. The truth is that since the middle of the nineteenth century the growing complication of social and industrial questions in the British Isles has overwhelmed the Imperial Government with business at its doors, which is too great for any one body to handle. If you will glance at countries like America, Germany, Canada, Australia, and South Africa, you will easily see why this is so. America with its population of one hundred millions transacts its business through no less than forty-nine governments, national and provincial; Germany with sixty-eight millions has over thirty such governments; Canada with eight millions has nine; Australia with five millions has seven; and South Africa with six millions has five. The United Kingdom with its forty-five millions has but one, and that Government has also to control interests common to peoples including more than a quarter of the human race, who are scattered over

the whole surface of the globe. The Imperial Government is thus called upon to transact three different orders of business—

- (1) The Imperial business of the whole British Commonwealth.
- (2) The national affairs of the British Isles.
- (3) The provincial affairs of England, Wales, Scotland, and Ireland.

§ 4. Inevitably Parliament attends first to the interests of the British electorate upon whose will it depends. Imperial affairs receive but scanty attention and those of India the least of all. The result is that the Imperial Government and public opinion in England has scarcely travelled beyond the policy chartered in 1858—the policy of governing India for the sake of the Indians, a policy sufficient for that day only. Public opinion in England has never consciously risen to the idea of enabling India to govern herself. By this I mean that these ideals have never been explicitly proposed and adopted by Parliament and given as instructions to its servants in India. It is not the fault of the Civil Servants that they are still acting on the instructions and traditions of 1858, because they have had no other general instructions since.

§ 5. I know that you agree with me that the outstanding need of the moment is that the principle of enabling India to govern herself should now be chartered in a form at least as binding and as explicit as the Proclamation of 1858. I believe that public opinion in England is almost ripe and can quickly be ripened to the point. Personally I believe that, if you could take a plebiscite on the subject in England now, the majority of voters would endorse the principle of self-government as the goal of British policy in India. But as things are it is almost impossible to get that issue clearly before the electorate of the United Kingdom, because at a general election they are preoccupied by their own affairs. There are too many issues before them at each election, and those nearest home tend to obscure the rest. And this must always be so, while a general election for the Imperial Parliament decides the domestic policy of the United Kingdom as well. It would cease to be so if once the Imperial Parliament were divested of all responsibility for the domestic affairs of the British Isles and had no more to do with them than it now has with those of Canada and Australia. But this could only be done by creating for the British Isles a separate national government

the whole surface of the globe. The Imperial Government is thus called upon to transact three different orders of business—

- (1) The Imperial business of the whole British Commonwealth.
- (2) The national affairs of the British Isles.
- (3) The provincial affairs of England, Wales, Scotland, and Ireland.

§ 4. Inevitably Parliament attends first to the interests of the British electorate upon whose will it depends. Imperial affairs receive but scanty attention and those of India the least of all. The result is that the Imperial Government and public opinion in England has scarcely travelled beyond the policy chartered in 1858—the policy of governing India for the sake of the Indians, a policy sufficient for that day only. Public opinion in England has never consciously risen to the idea of enabling India to govern herself. By this I mean that these ideals have never been explicitly proposed and adopted by Parliament and given as instructions to its servants in India. It is not the fault of the Civil Servants that they are still acting on the instructions and traditions of 1858, because they have had no other general instructions since.

§ 5. I know that you agree with me that the outstanding need of the moment is that the principle of enabling India to govern herself should now be chartered in a form at least as binding and as explicit as the Proclamation of 1858. I believe that public opinion in England is almost ripe and can quickly be ripened to the point. Personally I believe that, if you could take a plebiscite on the subject in England now, the majority of voters would endorse the principle of self-government as the goal of British policy in India. But as things are it is almost impossible to get that issue clearly before the electorate of the United Kingdom, because at a general election they are preoccupied by their own affairs. There are too many issues before them at each election, and those nearest home tend to obscure the rest. And this must always be so, while a general election for the Imperial Parliament decides the domestic policy of the United Kingdom as well. It would cease to be so if once the Imperial Parliament were divested of all responsibility for the domestic affairs of the British Isles and had no more to do with them than it now has with those of Canada and Australia. But this could only be done by creating for the British Isles a separate national government

of their own, similar to that which exists in the self-governing Dominions.

§ 6. The moment this change was effected the Imperial Parliament would have time once more to deal with Indian affairs. Its members would be able, as of old, to hold inquiries. Under modern conditions, these inquiries could be held, not merely in London, but also in India. In the absence of British issues, elections to the Imperial Parliament would be able to turn on Indian issues. The Imperial Parliament, moreover, would then include representatives from countries other than the British Isles, and, as I hope and believe, from India itself. If once you had Indian representatives on the Imperial Parliament, that Parliament would be obliged to attend to Indian affairs.

§ 7. In *The Problem of the Commonwealth* I have argued that a change like this could not be effected without a written constitution like that of the United States. There is one point in which I think that constitution could be imitated to advantage. It opens with a preamble in which the people of the United States pledge themselves to certain principles of free government. I should like to see the Imperial Constitution open in the same way with a preamble announcing that the Commonwealth exists for the purpose of extending self-government, as rapidly as may be, to all communities included within its circle, of which India is the most populous, more so, in fact, than all the rest put together. Here is a method in which you could enact a charter more binding and more irrevocable than the Proclamation of 1858.

§ 8. Unlike the French, the British people instinctively shrink from committing themselves to statements of general principles. Provided such principles are really sound, their explicit statement is for that very reason more necessary for the British than the French. Our caution in pledging ourselves to such statements is largely due to the fact that our experience has taught us how difficult it is in practice to give effect to general principles. In the Proclamation of 1858, for instance, we committed ourselves to the principle that Indians were entitled to equal rights with all other British citizens throughout the Commonwealth. The implications involved in the development of national self-government with the different parts of the Commonwealth were not then foreseen. The failure of mid-Victorian statesmen to realize this was fruitful in misunderstandings which have led to a serious estrangement between the Dominions and India. National self-government is robbed

of more than half its content unless the nation is given the power to determine the composition of its own population. But so long as the Government of India was held in trust, the trustees should have applied to India the same policy which the Dominions were applying to themselves. British citizens from each nation incorporated in the Commonwealth should only have been allowed to visit India on the same terms that their own national government accord to Indians in visiting their country. I look forward to a time when India itself will exercise the same power of self-government in internal affairs as the United Kingdom, Canada, Australia, New Zealand, or South Africa. Now suppose that in years to come a flood of European colonists were to begin to pour into Kashmir, or suppose that millions of negroes were to begin to settle in India, I think the Indian Government would be concerned to prevent that immigration. It ought to prevent it, and it would not have real powers of self-government unless it could prevent it. Such a power is, of course, more important to a half-empty country than one so thickly populated as India. Nevertheless, self-government would not be complete in India unless its Government had full powers to control immigration into its own territory. There was a real conflict between the policy embodied in the Proclamation of 1858 and the policy involved in the development of self-government, and that conflict was not foreseen. The charge of bad faith to which it exposes us weighs, I know, in the minds of those who shrink from enunciating the principle of self-government as the goal of British policy in India.

§ 9. There is, however, I submit, an all-important difference between the two cases. When by solemn proclamation we promised equal rights to all British citizens throughout the Commonwealth, we virtually promised to establish those rights at any moment, and wherever they might be demanded; and that was just what we could not do without going back on the principle of according national self-government to the various parts of the Commonwealth. In proposing to ourselves self-government as the ultimate goal of policy, not only in India, but in all parts of the British Commonwealth, we are doing nothing of the kind. We are merely pledging ourselves to neglect no possible means of approaching that ideal as rapidly as possible. We are only committing ourselves to a permanent line of policy which cannot be revoked, and which will remain binding on all successive Secretaries of State, and above all on the members of the

Civil Service out here. The greatest weakness of the present position is that the Civil Service have no orders on the subject, and in matters of policy they cannot act without orders.

§ 10. Such a promise, so bindingly made, is only the beginning though an all-important beginning. When a captain sets out on a voyage, it is of primary importance that he should have orders specifying the port to which he is to steer, however near or far that port may be. Having given him those orders you can next prescribe the course by which he is to steer. If I advocate an Imperial declaration that self-government is the goal of Indian policy, it is merely as a preface to taking some immediate steps for travelling in that direction.

§ 11. Assuming, then, that you have got an Imperial Government not only committed to this policy, but, what is equally important, able to consider it and to give effect to it, let us now turn to the question as to what the course should be. Let us glance at conditions involved in the problem of establishing self-government in India. This country with the doubtful exception of China, contains a population larger than that of any in the world which is geographically capable of achieving a specific nationhood of its own. Now contrast it with countries like England, France, or Italy. I am taking three countries which have national governments, and local authorities, but no *provincial authorities* intervening between the two. Here are three countries, which in area and population are commensurate with one of the larger provinces of India. It is scarcely in doubt that all three of them suffer from over-centralization. They would be far better off with provincial governments. In India such intermediary governments exist of necessity, and they transact the business which touches the people most nearly. In fact an administrator in a highly responsible position once said to me 'I am now coming to the view that there should be no Government of India except for Foreign Affairs, the Army and Navy'. However that may be, nine-tenths of the matters which affect the daily life of the millions of India, are handled by provincial executives and legislatures. If, therefore, in your progress towards self-government you wish to seek guidance from the past it is to countries like America, Canada, Australia, and South Africa you should look for it, rather than to England, Italy, or France. You should, in fact, look to the countries which, like India, are equipped with provincial governments, rather than to those which have none.

Civil Service out here. The greatest weakness of the present position is that the Civil Service have no orders on the subject, and in matters of policy they cannot act without orders.

§ 10. Such a promise, so bindingly made, is only the beginning though an all-important beginning. When a captain sets out on a voyage, it is of primary importance that he should have orders specifying the port to which he is to steer, however near or far that port may be. Having given him those orders you can next prescribe the course by which he is to steer. If I advocate an Imperial declaration that self-government is the goal of Indian policy, it is merely as a preface to taking some immediate steps for travelling in that direction.

§ 11. Assuming, then, that you have got an Imperial Government not only committed to this policy, but, what is equally important, able to consider it and to give effect to it, let us now turn to the question as to what the course should be. Let us glance at conditions involved in the problem of establishing self-government in India. This country with the doubtful exception of China, contains a population larger than that of any in the world which is geographically capable of achieving a specific nationhood of its own. Now contrast it with countries like England, France, or Italy. I am taking three countries which have national governments, and local authorities, but no *provincial authorities* intervening between the two. Here are three countries, which in area and population are commensurate with one of the larger provinces of India. It is scarcely in doubt that all three of them suffer from over-centralization. They would be far better off with provincial governments. In India such intermediary governments exist of necessity, and they transact the business which touches the people most nearly. In fact an administrator in a highly responsible position once said to me 'I am now coming to the view that there should be no Government of India except for Foreign Affairs, the Army and Navy'. However that may be, nine-tenths of the matters which affect the daily life of the millions of India, are handled by provincial executives and legislatures. If, therefore, in your progress towards self-government you wish to seek guidance from the past it is to countries like America, Canada, Australia, and South Africa you should look for it, rather than to England, Italy, or France. You should, in fact, look to the countries which, like India, are equipped with provincial governments, rather than to those which have none.

§ 12. Now of all these countries it is true that they devoted themselves to the achievement of self-government in the provinces, before attempting to apply the principle to the nation as a whole which includes the provinces. Personally I doubt whether they would have succeeded if they had attempted to effect both changes at the same time, or until the institutions of provincial self-government had been firmly rooted in the habits of the people. The reason is that men in the mass can scarcely think of two things at the same time. Look at a military organization and you will see that this is so. A company of one hundred men must learn to operate and to move as one unit *instinctively*, before it is of any use to drill eight companies together as a battalion. If you were to try and get eight hundred men to learn the practice of company and battalion drill together from the outset, they would fall into confusion so often that their whole training would be greatly delayed. The same is true of political organization. When Lord Durham in his famous Report eighty years ago recommended the introduction of responsible government into the Canadian Provinces, he saw clearly enough the need of a national government in Canada. But he did not advise that any attempt should be made to establish one until the separate provinces had mastered the art of running themselves. Ten years ago there were people who advocated that the Transvaal and Free State should only be given responsible government on condition that all the South African colonies united to establish a national government at the same time. Having watched at close quarters the establishment of provincial self-government, and also the subsequent establishment of the National Government in South Africa, I realize the difficulty of both these operations. I can imagine nothing more likely to prejudice the successful establishment of either than an attempt to establish both together.

§ 13. There is one apparent difference in the cases I have quoted. In America, Canada, Australia, and South Africa, provincial governments had first to be created and then a national government. In India such governments already exist, and it is only a question you may say of making them answerable to public opinion. You will find, however, that you cannot popularize the control of these governments without effecting a radical change in the mechanism itself. You cannot use petrol to drive the mechanism designed for a steam engine. In order to apply a new motive power you have to revise the whole machinery. Your whole system

§ 12. Now of all these countries it is true that they devoted themselves to the achievement of self-government in the provinces, before attempting to apply the principle to the nation as a whole which includes the provinces. Personally I doubt whether they would have succeeded if they had attempted to effect both changes at the same time, or until the institutions of provincial self-government had been firmly rooted in the habits of the people. The reason is that men in the mass can scarcely think of two things at the same time. Look at a military organization and you will see that this is so. § 13. There is one apparent difference in the cases I have quoted. In America, Canada, Australia, and South Africa, provincial governments had first to be created and then a national government. In India such governments already exist, and it is only a question you may say of making them answerable to public opinion. You will find, however, that you cannot popularize the control of these governments without effecting a radical change in the mechanism itself. You cannot use petrol to drive the mechanism designed for a steam engine. In order to apply a new motive power you have to revise the whole machinery. Your whole system

of administration, inherited as it was from the Mughal Empire, was conceived from the outset as the instrument of an autocracy. Under British rule it has been throughout developed on the principle that the impulse which moves it is to be applied from outside India. The Government of India is to obey the Secretary of State: the Provincial Governments are to obey the Government of India. Some municipal bodies with executives of their own are the only faint beginnings of a system designed to be driven by internal combustion. The whole position is succinctly set forth in the following extract from the Report of the Decentralization Commission.

The present distribution of functions between the Government of India, also styled the Central or Supreme Government, and the Provincial or Local Governments and Administrations is, stated generally, as follows:—Amongst the important matters which the former retain in their own hands are those relating to foreign affairs, the defences of the country, general taxation, currency, debt, tariffs, posts and telegraphs, railways, and accounts and auditing. Ordinary internal administration, police, civil and criminal justice, prisons, the assessment and collection of the revenues, education, medical and sanitary arrangements, irrigation, buildings and roads, forests, and the control over municipal and rural boards fall to the share of the Provincial Governments. But even in these matters the Government of India exercise a general and constant control. They lay down lines of general policy, and test their application from the administration reports and returns relating to the main departments under the Local Governments.¹ They also employ expert officers to inspect and advise upon a number of departments which are primarily administered by the Local Governments, including Agriculture, Irrigation, Forests, Medical, Sanitation, Education, Excise and Salt, Printing and Stationery, and Archaeology. These officers are commonly known as Imperial Inspectors-General.

The control of the Government of India is, moreover, not confined to the prescription of policy and to action taken upon reports and inspections. It assumes more specific forms. They scrutinize, and, when necessary, modify the annual budgets of the Local Governments. Every newly-created appointment of importance, every large addition even to minor establishments, every material alteration in service grades, has to receive their specific approval, and in many cases, reference to the Secretary of State is likewise necessary. The practical result is that no new departure in Provincial administration can be undertaken without their preliminary sanction or, in important matters, without that of the Secretary of State also. Moreover, the general conditions of Government service, such as

¹ As already stated, the Local Governments also submit copies of all their printed proceedings to the Government of India.

of administration, inherited as it was from the Mughal Empire, was conceived from the outset as the instrument of an autocracy. Under British rule it has been throughout developed on the principle that the impulse which moves it is to be applied from outside India. The Government of India is to obey the Secretary of State: the Provincial Governments are to obey the Government of India. Some municipal bodies with executives of their own are the only faint beginnings of a system designed to be driven by internal combustion. The whole position is succinctly set forth in the following extract from the Report of the Decentralization Commission.

The present distribution of functions between the Government of India, also styled the Central or Supreme Government, and the Provincial or Local Governments and Administrations is, stated generally, as follows:—Amongst the important matters which the former retain in their own hands are those relating to foreign affairs, the defences of the country, general taxation, currency, debt, tariffs, posts and telegraphs, railways, and accounts and auditing. Ordinary internal administration, police, civil and criminal justice, prisons, the assessment and collection of the revenues, education, medical and sanitary arrangements, irrigation, buildings and roads, forests, and the control over municipal and rural boards fall to the share of the Provincial Governments. But even in these matters the Government of India exercise a general and constant control. They lay down lines of general policy, and test their application from the administration reports and returns relating to the main departments under the Local Governments.¹ They also employ expert officers to inspect and advise upon a number of departments which are primarily administered by the Local Governments, including Agriculture, Irrigation, Forests, Medical, Sanitation, Education, Excise and Salt, Printing and Stationery, and Archaeology. These officers are commonly known as Imperial Inspectors-General.

The control of the Government of India is, moreover, not confined to the prescription of policy and to action taken upon reports and inspections. It assumes more specific forms. They scrutinize, and, when necessary, modify the annual budgets of the Local Governments. Every newly-created appointment of importance, every large addition even to minor establishments, every material alteration in service grades, has to receive their specific approval, and in many cases, reference to the Secretary of State is likewise necessary. The practical result is that no new departure in Provincial administration can be undertaken without their preliminary sanction or, in important matters, without that of the Secretary of State also. Moreover, the general conditions of Government service, such as

¹ As already stated, the Local Governments also submit copies of all their printed proceedings to the Government of India.

leave, pension, and travelling allowance rules, and the Public Works and Forest Codes, are all strictly prescribed by the Central Government, either *suo motu* or on instruction from the Secretary of State. Lastly, there is a wide field of appeal to the Government of India, as also to the Secretary of State, from persons who may deem themselves aggrieved by the action of a Local Government.

The essential point to be borne in mind is thus that at present, even in matters primarily assigned to the Provincial Governments, these act as the agents of the Government of India, who exercise a very full and constant check over their proceedings.¹

§ 14. In so far as you introduce any real self-government into the provinces these simple relations of subordinate to superior authorities must be changed. Orders can be given from above to provincial officials, who are there to take orders from above. But orders cannot be given from above to a popular government which by the law of its being obeys the impulse it receives from below. You can give limited powers to provincial assemblies, you can restrict those powers as you will; but within the limit of those powers such assemblies must exercise absolute freedom of choice. Popular government in any country too large to dispense with provinces, in fact, means that at least two governments must exist and operate side by side in immediate independence of each other correlated only by the terms of the constitution. In a Canadian Province, for instance, you may see the establishments of the post office and of the agricultural department working on these lines. The postal officials derive their instructions from the National Assembly at Ottawa, the Agricultural officials from the provincial assembly at Toronto, Quebec, or Winnipeg. Self-government in any large country thus involves the operation of two authorities with separate mainsprings side by side. The word 'dyarchy', compounded of the Greek words signifying 'two' and 'government', has been coined to denote this principle and for convenience I shall use it. Dyarchy is so foreign to military and bureaucratic conceptions, that the officers of such organizations are apt to suppose that the thing cannot exist.

§ 15. In order that two governments may be capable of operating in the same area, you must make the duties assigned to each as clear as possible in a constitution which may consist of one or of many enactments. You must distinguish the functions of the two governments and make

¹ *Report of the Royal Commission upon Decentralization in India*, vol. i, pp. 20 and 21.

leave, pension, and travelling allowance rules, and the Public Works and Forest Codes, are all strictly prescribed by the Central Government, either *suo motu* or on instruction from the Secretary of State. Lastly, there is a wide field of appeal to the Government of India, as also to the Secretary of State, from persons who may deem themselves aggrieved by the action of a Local Government.

The essential point to be borne in mind is thus that at present, even in matters primarily assigned to the Provincial Governments, these act as the agents of the Government of India, who exercise a very full and constant check over their proceedings.¹

§ 14. In so far as you introduce any real self-government into the provinces these simple relations of subordinate to superior authorities must be changed. Orders can be given from above to provincial officials, who are there to take orders from above. But orders cannot be given from above to a popular government which by the law of its being obeys the impulse it receives from below. You can give limited powers to provincial assemblies, you can restrict those powers as you will; but within the limit of those powers such assemblies must exercise absolute freedom of choice. Popular government in any country too large to dispense with provinces, in fact, means that at least two governments must exist and operate side by side in immediate independence of each other correlated only by the terms of the constitution. In a Canadian Province, for instance, you may see the establishments of the post office and of the agricultural department working on these lines. The postal officials derive their instructions from the National Assembly at Ottawa, the Agricultural officials from the provincial assembly at Toronto, Quebec, or Winnipeg. Self-government in any large country thus involves the operation of two authorities with separate mainsprings side by side. The word 'dyarchy', compounded of the Greek words signifying 'two' and 'government', has been coined to denote this principle and for convenience I shall use it. Dyarchy is so foreign to military and bureaucratic conceptions, that the officers of such organizations are apt to suppose that the thing cannot exist.

§ 15. In order that two governments may be capable of operating in the same area, you must make the duties assigned to each as clear as possible in a constitution which may consist of one or of many enactments. You must distinguish the functions of the two governments and make

Abstract

[illegible]

1000

1000

the distinction as plain as you can. Now the potential functions of government are infinite in number, while the actual functions constantly increase as the needs of society increase. You would never succeed in drawing out two final lists of functions, one comprising all the things which the national government is to do, and the other all the things which the provincial governments are to do. So you give a list of specified things to one of those governments. You may enlarge that list as you like from time to time; but you provide that all the things which at any given time are not on that list fall within the sphere of the other government.

§ 16. To bring matters to a fine point; if you are to introduce any real element of self-government into your provincial institutions, you must have a list of functions, however short, which the Central Government may not touch so long as they remain on that list.

§ 17. In India nothing of the sort has been done. There is nothing within the powers of a provincial government which the Government of India may not touch, and scarcely anything which it does not touch from time to time. But there is more in it than this. One finds oneself wondering whether any serious attempt has ever been made to distinguish the things which belong to the parts, from those which belong to the whole, to think out the principles upon which that distinction should be based, or to bring the cases which arise to the test of those principles. In books on India one reads a great deal of the infinite diversity of its peoples, a diversity which in some respects is greater than that between any two nations in Europe. But if so, how can it be right to apply one criminal code to the whole country? In the Punjab one is told that offences against the law of marriage are the commonest cause of murder and serious crime. Madras, on the other hand, is but little troubled by this factor. Is it really sound then that the Government of the Punjab should not be free within limits to mould its own criminal law to suit its own conditions? The other day the Viceroy's Council passed a bill dealing with one form of cruelty to animals. If, as I am told, this particular crime is practically confined to one province, why was the matter dealt with by the National Legislature? Then the Patna and Dacca universities were discussed; and finally the member for Burmah asked the Government of India to deal with the question of a Burmese University. Why did no one suggest that there was anything strange in asking the Government of India to deal with the University of

You would never succeed in drawing out two final lists of functions, one comprising all the things which the national government is to do, and the other all the things which the provincial governments are to do. So you give a list of specified things to one of those governments. You may enlarge that list as you like from time to time; but you provide that all the things which at any given time are not on that list fall within the sphere of the other government.

§ 16. To bring matters to a fine point; if you are to introduce any real element of self-government into your provincial institutions, you must have a list of functions, however short, which the Central Government may not touch so long as they remain on that list.

§ 17. In India nothing of the sort has been done. There is nothing within the powers of a provincial government which the Government of India may not touch, and scarcely anything which it does not touch from time to time. But there is more in it than this. One finds oneself wondering whether any serious attempt has ever been made to distinguish the things which belong to the parts, from those which belong to the whole, to think out the principles upon which that distinction should be based, or to bring the cases which arise to the test of those principles. In books on India one reads a great deal of the infinite diversity of its peoples, a diversity which in some respects is greater than that between any two nations in Europe. But if so, how can it be right to apply one criminal code to the whole country? In the Punjab one is told that offences against the law of marriage are the commonest cause of murder and serious crime. Madras, on the other hand, is but little troubled by this factor. Is it really sound then that the Government of the Punjab should not be free within limits to mould its own criminal law to suit its own conditions? The other day the Viceroy's Council passed a bill dealing with one form of cruelty to animals. If, as I am told, this particular crime is practically confined to one province, why was the matter dealt with by the National Legislature? Then the Patna and Dacca universities were discussed; and finally the member for Burmah asked the Government of India to deal with the question of a Burmese University. Why did no one suggest that there was anything strange in asking the Government of India to deal with the University of

a province so detached that one sometimes wonders if it should have been incorporated in India at all? In saying all this I am probably exposing my own ignorance; but if so, I want to expose it in order to learn by getting you to correct me and explain why these things are so. In the absence of such explanation I am drifting towards the conclusion that in this vast and diversified country, no real attempt has been made to evolve a distinction between things provincial and things which are national. For despite all this diversity you have only to look at the map to see that in India proper there is national unity underlying the diversity. You cannot eliminate the Government of India as John Bright wished to do. But I suggest that you can and must evolve a list of matters which provincial governments can regulate for themselves, subject only to such a veto by the Governor-General as exists in Canada.

§ 18. Indeed, I would go so far as to say that your so-called provincial governments are scarcely deserving of the name. They are merely the Government of India operating in the provinces. One curious manifestation of this is the peculiar position of the I.C.S. in the Provinces (see *Report of the Decentralization Commission*, sections 31, 34, 38, 39, and 40). The members of this corps are still expected to supervise all the executive departments of government, although to a lesser degree than formerly. The Commissioner and Collector still supervise and report upon the schools, the police, the forests, the irrigation department, the Public Works Department, and so on. In a great measure the I.C.S. remains the Government of India in the Provinces. This simply will not work under any system of real popular government which operates through a parliament and cabinet. In responsible government the unity which an executive must have is provided, not by the permanent civil service, but by the cabinet. The permanent officers are all grouped under one or other of the ministers, and any matters at issue between various departments are threshed out between ministers in the secrecy of the cabinet. The minister who is overruled must either resign or else be prepared not merely to accept the cabinet's decision, but even to justify to the public a decision which he has contested with his colleagues. The system implies that ministers stand on a footing of virtual equality under the leadership of the Prime Minister. Members of the I.C.S. would have to be answerable to one minister whose position would be intolerable if his subordinates were constantly

a province so detached that one sometimes wonders if it should have been incorporated in India at all? The minister who is overruled must either resign or else be prepared not merely to accept the cabinet's decision, but even to justify to the public a decision which he has contested with his colleagues. The system implies that ministers stand on a footing of virtual equality under the leadership of the Prime Minister. Members of the I.C.S. would have to be answerable to one minister whose position would be intolerable if his subordinates were constantly

supervising and reporting on the departmental work of all his colleagues.

§ 19. The general result is that in order to popularize the control of provincial governments you must not only draw horizontal lines dividing their functions from those of the national government ; but you must also draw vertical lines dividing the functions of provincial departments from each other.

§ 20. In travelling towards responsible government there is another consideration you must hold in mind, which differentiates the case of India from that of America, Canada, and Australia, though in a slighter degree from that of South Africa. The people of the American, Australian, and Canadian colonies were all approximately at the same stage of advancement. In the Provinces of India there is a far greater variety. Am I not right in thinking that in Bombay and Bengal the people sufficiently conversant with public affairs to take a part in them are far more numerous than in the Central and Frontier Provinces ? If so, your system should be one which admits of each Province advancing at its own pace. If you apply the same system to all of them you are on the horns of a dilemma. Either the progress of your advanced Provinces must be kept down to the pace of the most backward, or you will have a breakdown in the backward Provinces which will bring your whole forward movement into disrepute. Any definite breakdown will strengthen the case of those who are averse to progress towards responsible government. Disorder is like plague ; the infection spreading from one community to its neighbours will greatly complicate the task of ministers in the more advanced communities. Happily the reverse is also true. Unhampered progress in advanced Provinces will influence the backward communities. If you desire your progress towards responsible government to be as rapid as possible you have everything to gain from a system which allows each Province freedom to move as fast as it can without waiting for those behind it. You don't want your march to proceed on the military principle that the pace of the army must be that of the slowest regiment.

§ 21. And whatever steps you take towards responsible government should be real steps. The criticism I should venture to make of the various schemes which have been put forward is that they provide no instalment of real responsible government. The first condition of popular government is that a definite section of the people should

Either the progress of your advanced Provinces must be kept down to the pace of the most backward, or you will have a breakdown in the backward Provinces which will bring your whole forward movement into disrepute. Any definite breakdown will strengthen the case of those who are averse to progress towards responsible government. Disorder is like plague; the infection spreading from one community to its neighbours will greatly complicate the task of ministers in the more advanced communities. Happily the reverse is also true. Unhampered progress in advanced Provinces will influence the backward communities. If you desire your progress towards responsible government to be as rapid as possible you have everything to gain from a system which allows each Province freedom to move as fast as it can without waiting for those behind it. You don't want your march to proceed on the military principle that the pace of the army must be that of the slowest regiment.

§ 21. And whatever steps you take towards responsible government should be real steps. The criticism I should venture to make of the various schemes which have been put forward is that they provide no instalment of real responsible government. The first condition of popular government is that a definite section of the people should

aspire to achieve for themselves a better life not only in things material but in things spiritual. A few leaders must then formulate plans for realizing these vague aspirations in practice. In response to the vague aspiration for improved education, leaders must formulate schemes for training more teachers, building more schools, &c. But in offering to execute those plans they must also insist that the people at large must bear the cost, and bear it before the benefit is reaped and experienced. And when this is done the plans will often prove disappointing in their results. Other leaders will arise who will argue that many mistakes have been made and that they, in the light of experience, if given the power, can do things in a better way. In the long run the electorate can only test the value of the various leaders and their views by trial, that is to say by dismissing one government and by putting another in office. The trustiest leaders in the long run will prove to be those who can induce the electorate to face the heaviest immediate sacrifice for the sake of a future benefit to be reaped by their successors rather than themselves. In order to realize these conditions your constitution must be one which makes it perfectly clear where responsibility for success or failure lies. In a government half appointed and half elected you could never know this. It is only when governments stand or fall together under the leadership of one man that a people really learn which leaders to trust and which to avoid.

§ 22. To formulate principles with which no one can quarrel is fatally easy when you are writing of government. The only real test of their practical value is first to see whether you can formulate them into a scheme, secondly, to see whether that scheme will draft into legal shape, and thirdly, to see how the law so framed will work in actual practice.

§ 23. I will now go so far as to submit the principles I have suggested to the first test, of seeing whether I can suggest a scheme which looks as if it would enable these principles to be realized in practice. I shall do this in order to elicit your criticism. I will ask you, however, to look at the scheme as a whole before making criticisms on any part of it.

§ 24. The first step I would suggest is to get rid of the official vote altogether off the Provincial Legislative Council. The reason for having these voters under the direct orders of Government is plain. At present the Provincial Government is responsible to the Government of India; the Government of India is responsible to the Secretary of State, and the Secretary of State to Parliament. The Secretary

aspire to achieve for themselves a better life not only in things material but in things spiritual. A few leaders must then formulate plans for realizing these vague aspirations in practice. In response to the vague aspiration for improved education, leaders must formulate schemes for training more teachers, building more schools, &c. But in offering to execute those plans they must also insist that the people at large must bear the cost, and bear it before the benefit is reaped and experienced. And when this is done the plans will often prove disappointing in their results. Other leaders will arise who will argue that many mistakes have been made and that they, in the light of experience, if given the power, can do things in a better way. In the long run the electorate can only test the value of the various leaders and their views by trial, that is to say by dismissing one government and by putting another in office. The truest leaders in the long run will prove to be those who can induce the electorate to face the heaviest immediate sacrifice for the sake of a future benefit to be reaped by their successors rather than themselves. In order to realize these conditions your constitution must be one which makes it perfectly clear where responsibility for success or failure lies. In a government half appointed and half elected you could never know this. It is only when governments stand or fall together under the leadership of one man that a people really learn which leaders to trust and which to avoid.

§ 22. To formulate principles with which no one can quarrel is fatally easy when you are writing of government. The only real test of their practical value is first to see whether you can formulate them into a scheme, secondly, to see whether that scheme will draft into legal shape, and thirdly, to see how the law so framed will work in actual practice.

§ 23. I will now go so far as to submit the principles I have suggested to the first test, of seeing whether I can suggest a scheme which looks as if it would enable these principles to be realized in practice. I shall do this in order to elicit your criticism. I will ask you, however, to look at the scheme as a whole before making criticisms on any part of it.

§ 24. The first step I would suggest is to get rid of the official vote altogether off the Provincial Legislative Council. The reason for having these voters under the direct orders of Government is plain. At present the Provincial Government is responsible to the Government of India; the Government of India is responsible to the Secretary of State, and the Secretary of State to Parliament. The Secretary

of State cannot, therefore, undertake to be votes—one in the Provincial Council and the ment, which may be in conflict. He cannot, the provincial executive to be bound by an Legislative Council. I am not ignoring the official majority has been accorded in these Government relies in the last resort on its. In the last analysis one man cannot serv and one government cannot obey two au Provincial Government cannot be responsib tary of State and also to the Provincial Cou flinch from the fact? Why not say so not empower the Provincial Government to cannot hold itself bound by this or that f. What real good is done by this cumbrous e deceives no one) of ordering intelligent c blindly, irrespective of their personal jud practice operates to prostitute the princi conscientious judgement by individuals up responsible government can rest. It ha consequence. The supreme purpose of this wealth is to achieve the unity of various na state. It exists to train them to resist their r to oppose each other, and to learn to act t. The stranger who enters the galleries of Councils sees the racial division officially stamped on the benches beneath his eyes.

§ 25. The effect is to create artificial part and one British. The constant pressure of operates to check the development of real and it is only in so far as you develop such will achieve self-government. Just at pr self-governing countries are obsessed by the system. People are always obsessed by th system under which they are living and fo defects of other systems. For no system c free from defects. If you are to work pop at all you must have some organized part portant thing is that those parties shoul the sentiments of people in the country itse

§ 26. I have said, get rid of the offic you can do without getting rid of the offic any council is to pronounce an opinion it matter in question explained to it by those of the business. Let members of the Gc

of State cannot, therefore, undertake to be votes—one in the Provincial Council and the ment, which may be in conflict. He cannot, the provincial executive to be bound by an Legislative Council. I am not ignoring the official majority has been accorded in these Government relies in the last resort on its. In the last analysis one man cannot serve and one government cannot obey two authorities. Provincial Government cannot be responsible to the Government of State and also to the Provincial Council. Do you flinch from the fact? Why not say so and not empower the Provincial Government to do so? It cannot hold itself bound by this or that. What real good is done by this cumbrous system (which deceives no one) of ordering intelligent men to act blindly, irrespective of their personal judgment? The practice operates to prostitute the principle of conscientious judgement by individuals upon which any responsible government can rest. It has no real consequence. The supreme purpose of this Government is to achieve the unity of various nationalities in the state. It exists to train them to resist their rulers, to oppose each other, and to learn to act together. The stranger who enters the galleries of the Councils sees the racial division officially stamped on the benches beneath his eyes.

§ 25. The effect is to create artificial parties and one British. The constant pressure of the British operates to check the development of real self-government and it is only in so far as you develop such self-government will you achieve self-government. Just at present all self-governing countries are obsessed by the British system. People are always obsessed by the system under which they are living and find defects of other systems. For no system is free from defects. If you are to work popular government at all you must have some organized parties. The important thing is that those parties should represent the sentiments of people in the country itself.

§ 26. I have said, get rid of the official character of any council is to pronounce an opinion on the matter in question explained to it by those concerned of the business. Let members of the Government

the Council and speak. Let them be free to summon any other officials they please to take part in the debates. But let voting be confined to members who are not officials. I do not say let it be confined to elected members, because, as I understand, you cannot as yet secure that all sections of your population can get their opinions voiced unless some members are specially appointed.

§ 27. A minor though not unimportant advantage of the change would be that the time of highly-paid officials would no longer be wasted by sitting for weeks on the benches of the Councils, waiting to cast any vote which Government may order them to record.

§ 28. I am assuming that Provincial Governments would be instructed to exercise this power of refusal only where they now use the official whip. They should accept the opinion of the Council, even when it does not coincide with their own, except where they feel that it is such that they cannot be responsible for giving effect to it. Subject to this safeguard the discussions of the Council would range over the whole sphere of provincial government. They would thus remain what they are designed to be, an organ through which public opinion can express itself with regard to any branch of the public administration of law. But I am presently going to suggest that you should make this Council responsible in the true sense of the word for certain branches of administration and also of legislation.

§ 29. Before doing so, however, I would urge that your Councils should be made responsible to a clearly defined electorate, however small that electorate may be. At present this has been done only in the case of the Moham-medan minority. The majority are elected by district boards and municipal councils. With reference to this system there are two questions that I want to put.

- (1) Why cannot the voters who elect local authorities be allowed to elect the provincial councillors?

The answer can only be that many of them are not qualified to record their judgement upon provincial affairs. Accepting that answer for a moment, I have another question to put.

- (2) Are the members of local authorities the only people fit to vote for provincial councillors?

Surely not. There must be many others who did not stand for the local authority who are just as qualified to vote for the Provincial Councils. If so, why not make a list of them and let them vote?

Abstract

1. **Identify the main components of the system.**
 2. **Define the scope and objectives of the study.**
 3. **Review the literature related to the topic.**
 4. **Develop a methodology for data collection and analysis.**
 5. **Collect and analyze the data.**
 6. **Draw conclusions and discuss the implications of the findings.**
 7. **Write the report and present the results.**

Abstract

the Council and speak. Let them be free to summon any other officials they please to take part in the debates. But let voting be confined to members who are not officials. I do not say let it be confined to elected members, because, as I understand, you cannot as yet secure that all sections of your population can get their opinions voiced unless some members are specially appointed.

§ 27. A minor though not unimportant advantage of the change would be that the time of highly-paid officials would no longer be wasted by sitting for weeks on the benches of the Councils, waiting to cast any vote which Government may order them to record.

§ 28. I am assuming that Provincial Governments would be instructed to exercise this power of refusal only where they now use the official whip. They should accept the opinion of the Council, even when it does not coincide with their own, except where they feel that it is such that they cannot be responsible for giving effect to it. Subject to this safeguard the discussions of the Council would range over the whole sphere of provincial government. They would thus remain what they are designed to be, an organ through which public opinion can express itself with regard to any branch of the public administration of law. But I am presently going to suggest that you should make this Council responsible in the true sense of the word for certain branches of administration and also of legislation.

§ 29. Before doing so, however, I would urge that your Councils should be made responsible to a clearly defined electorate, however small that electorate may be. At present this has been done only in the case of the Moham-medan minority. The majority are elected by district boards and municipal councils. With reference to this system there are two questions that I want to put.

- (1) Why cannot the voters who elect local authorities be allowed to elect the provincial councillors?

The answer can only be that many of them are not qualified to record their judgement upon provincial affairs. Accepting that answer for a moment, I have another question to put.

- (2) Are the members of local authorities the only people fit to vote for provincial councillors?

Surely not. There must be many others who did not stand for the local authority who are just as qualified to vote for the Provincial Councils. If so, why not make a list of them and let them vote?

§ 30. The only intelligible answer to this question can be that the members of local authorities have some kind of mandate from their own electors as to the choice they should make of provincial councillors. If so, why not let the local electors explicitly record their own choice of members for the Provincial Councils? But the fact is there is no such mandate. Again and again I have asked experienced Indians and officials whether the elector in voting for the member of a local authority ever asks the candidate how he will vote at elections for the Provincial Council, and the answer is always in the negative. Another and really mischievous tendency is already at work, so I am told. Candidates who desire election to the Provincial Councils are concerned to pack the local authorities with members who will vote for them. They would be less than human if they did not. At present, as I am informed, the electors are not told this. They are asked to vote on municipal issues for men who are largely seeking election with Provincial instead of Municipal issues in view. But presently, as interest in Provincial politics develops, the electors will and must be told. They will be asked to vote this way or that for local authorities, not in view of the better administration of local business, but in order to secure this or that result in subsequent provincial elections. It was just this mischief which led to the recent amendment of the American Constitution, enabling senators to be chosen by direct popular election. So long as the State Assemblies chose the senators, state elections turned on federal issues. The voters were driven to choose state legislators pledged to vote for some particular senator, not because the candidate was pledged to this or that reform in state politics.

§ 31. If a people are to be trained to the practice of self-government, surely it is the simplest system which will best achieve that end. Why not frame a list of electors in each Province such as thoughtful men who know India consider to be qualified to form a judgement and record an opinion on Provincial affairs. Obviously a man may be qualified to vote on the affairs of his own town, when he is not qualified to vote on the affairs of the Province, because he might know a good deal about local affairs while he knew scarcely anything of Provincial affairs. Universal suffrage exists in no country in the world. Certain qualifications are always required as to age, generally as to property and often as to education. You have first to consider what qualifications will sufficiently attest the fitness of a man

§ 30. The only intelligible answer to this question can be that the members of local authorities have some kind of mandate from their own electors as to the choice they should make of provincial councillors. If so, why not let the local electors explicitly record their own choice of members for the Provincial Councils? But the fact is there is no such mandate. Again and again I have asked experienced Indians and officials whether the elector in voting for the member of a local authority ever asks the candidate how he will vote at elections for the Provincial Council, and the answer is always in the negative. Another and really mischievous tendency is already at work, so I am told. Candidates who desire election to the Provincial Councils are concerned to pack the local authorities with members who will vote for them. They would be less than human if they did not. At present, as I am informed, the electors are not told this. They are asked to vote on municipal issues for men who are largely seeking election with Provincial instead of Municipal issues in view. But presently, as interest in Provincial politics develops, the electors will and must be told. They will be asked to vote this way or that for local authorities, not in view of the better administration of local business, but in order to secure this or that result in subsequent provincial elections. It was just this mischief which led to the recent amendment of the American Constitution, enabling senators to be chosen by direct popular election. So long as the State Assemblies chose the senators, state elections turned on federal issues. The voters were driven to choose state legislators pledged to vote for some particular senator, not because the candidate was pledged to this or that reform in state politics.

§ 31. If a people are to be trained to the practice of self-government, surely it is the simplest system which will best achieve that end. Why not frame a list of electors in each Province such as thoughtful men who know India consider to be qualified to form a judgement and record an opinion on Provincial affairs. Obviously a man may be qualified to vote on the affairs of his own town, when he is not qualified to vote on the affairs of the Province, because he might know a good deal about local affairs while he knew scarcely anything of Provincial affairs. Universal suffrage exists in no country in the world. Certain qualifications are always required as to age, generally as to property and often as to education. You have first to consider what qualifications will sufficiently attest the fitness of a man

who has them to vote on Provincial affairs. The next step is to get on to a list all the people who are proved to possess those qualifications. Then it is clear that they and no one else are the people finally responsible for the interests entrusted to the Council they elect. And don't be distressed if the list of qualified voters is only a very small section of the population. Such smallness is an obstacle in the path of full responsible government, which can be removed if you look it in the face. If the qualifications required are sound, but the men who are proved to possess them strikingly few, the shortness of the voting roll will of itself stimulate desire to remedy the defect. Social defects are removed by exposing them to light not by masking them. The existing electoral system simply evades any decision as to how many people are fit to vote for the Legislative Councils. It excludes from the actual franchise large numbers of people who are really fit to vote for the Councils, while it gives the Councils themselves no real constituencies to which they are responsible. Surely it would constitute no small step towards real self-government if you had a list of primary voters, however small, to whom the Councils knew that they were answerable, and who knew that the councillors were answerable to them and to no one else. But I am preaching to the converted as you have recorded your opinion in favour of direct election.

§ 32. Let us assume, therefore, that we have got rid of the official members and have a Council directly elected by primary voters. So far the suggestions I have made have merely been by way of clearing the mound of débris before laying the first foundations of genuine responsible government.

§ 33. I am now going to suggest a way in which the foundations might be laid and a superstructure built as the courses laid below are found to be strong enough to carry it. Let us deal first of all with administrative work and go on to legislative work afterwards. By reference to the passage I have quoted from the *Report of the Decentralization Commission*, and from other sources, I have compiled the following rough list of the administrative duties such as either are, or might be, entrusted to Provincial governments.

§ 30. The only intelligible answer to this question can be that the members of local authorities have some kind of mandate from their own electors as to the choice they should make of provincial councillors. If so, why not let the local electors explicitly record their own choice of members for the Provincial Councils? But the fact is there is no such mandate. Again and again I have asked experienced Indians and officials whether the elector in voting for the member of a local authority ever asks the candidate how he will vote at elections for the Provincial Council, and the answer is always in the negative. Another and really mischievous tendency is already at work, so I am told. Candidates who desire election to the Provincial Councils are concerned to pack the local authorities with members who will vote for them. They would be less than human if they did not. At present, as I am informed, the electors are not told this. They are asked to vote on municipal issues for men who are largely seeking election with Provincial instead of Municipal issues in view. But presently, as interest in Provincial politics develops, the electors will and must be told. They will be asked to vote this way or that for local authorities, not in view of the better administration of local business, but in order to secure this or that result in subsequent provincial elections. It was just this mischief which led to the recent amendment of the American Constitution, enabling senators to be chosen by direct popular election. So long as the State Assemblies chose the senators, state elections turned on federal issues. The voters were driven to choose state legislators pledged to vote for some particular senator, not because the candidate was pledged to this or that reform in state politics.

§ 31. If a people are to be trained to the practice of self-government, surely it is the simplest system which will best achieve that end. Now under the proposal I am going to make to you the Legislative Councils remodelled on the lines I have sketched above would continue to cover the whole field of provincial administration in their discussions. Let them be free as at present to suggest anything and to discuss anything, sitting in their present capacity as advisory councils. But let these Councils also sit in another capacity, that of responsible legislatures in a self-governing Colony, destined to become the province of a self-governing Dominion. To each Legislative Council sitting in that capacity you might entrust certain of the powers scheduled above, together with the proportion of revenue spent on them during the last few years. Those powers and those revenues you would leave them to administer on the lines of responsible government. Then as each electorate and its Council proved its capacity for the task already assigned to it, you would add other powers and revenues, either singly or in groups. The last powers to be added would be the administration of the Courts, the prisons, and police. The Council would in fact sit in two capacities. In one capacity it would sit as at present as an advisory Council convened to discuss all matters of provincial government. In another capacity it would act exactly like the legislature of a self-governing colony in respect of the functions and revenues which had been transferred to it. There will thus, during the transition stage, be two sets of functions, those transferred to the control of the Council and those reserved to the present Provincial Government. It will be convenient if we agree to speak of these powers as *transferred powers* and *reserved powers*.

§ 34. Before going farther let me say that I suggest making the experiment frankly experimental. You will notice that I have divided the scheduled powers into four groups. In the first group I have included all the powers which

might be transferred together at once to all the Provincial Legislatures to administer. In some Provinces either forests or irrigation or both might be added according to local conditions. In other Provinces these functions might have to be reserved until the Council had found its feet. Where two Provinces both depend for their water on the same rivers, it might never be possible to provincialize the control of irrigation at all. The whole point of the proposal is that it does not commit you to a hard and fast procedure. You can vary it according to the ascertained conditions and aptitudes of the various Provinces. It gives you, in fact, elasticity. In all the Provinces, however, I suggest that you might take group one as a first instalment of transferred powers, and hand them over to the Council with their correlative revenues with full power to administer them for five years. At the end of the five years the arrangement, if it failed, might lapse; if it succeeded moderately it might then be renewed for a period of five years, while, if it succeeded well, further powers and revenues would be added from the reserved list.

§ 35. As the method by which the experiment would be initiated is all-important, I will endeavour to trace it. To begin with let us think of a Province where the Governor has himself served in the British Cabinet or, better still, as the Governor of a self-governing Colony, and is therefore familiar with the working of responsible government. His first step would be to send for the member of the Council whom he thought was the most likely to be able to command a majority of its members, and trust him with the task of forming a Provincial government in respect of the transferred powers. These powers might be conveniently grouped into four portfolios as follows—

Minister of Agriculture—

Agriculture and Co-operative Credit.

Provincial Secretary—

Factories, Archaeology and Museums, Registration of Deeds, Control of Professions (Forests?).

Minister of Public Works—

Roads and Bridges, Local Railways, Buildings required by the Administration (Irrigation?).

Finance—

Transferred revenues and sources of Taxation.

might be transferred together at once to all the Provincial Legislatures to administer. In some Provinces either forests or irrigation or both might be added according to local conditions. § 36. The Leader sent for would then proceed to select three colleagues who, together with himself, would form the Government. The Governor might help him with advice, but with advice only.

§ 37. When the Government had been formed the ministers would not be expected to begin by taking on their shoulders straight away the functions entrusted to them. Where necessary they would be left to take their own time in constructing departments suitable for the purpose. Let me illustrate the process by one case, that of finance. The new Minister of Finance would begin by selecting from the Civil Service the man whom he desired to act as permanent head of his new department. Here, again, a Governor of the right kind could be a great help to him, as the Governor should know the merits of the various officials. The Minister of Finance would then have every chance of securing a permanent head who would work in sympathy with the new system. Aided then by the advice of the permanent head he would proceed to construct his department from materials drawn from the service. Clearly he should be obliged to draw on the existing materials and not make any appointments outside the Service except with the special sanction of the Government of India. The other Ministers would each pursue the same course as near as may be. When each of them had fashioned their new departments from materials drawn from the existing services, the Cabinet would notify the Governor that on a specified date they were ready to take over the transferred powers and revenues, and the new Government would come into active being side by side with the old one. The condition of dyarchy would then have begun.

§ 38. You would then have in power a provincial ministry entrusted with specified powers and revenues for which ministers would be answerable to the Legislative Council, which, sitting in this capacity, would of course be presided over by its own Speaker. If they lost the confidence of the Council they would either have to resign or ask the Government to dissolve the Council—to appeal, in fact, from the Council to the Provincial electorate—that is one reason why it is so important to know who the Provincial electorate really are.

§ 39. I have assumed that the Government could be given the proportion of the revenues corresponding to the duties handed over to them. To ascertain this is merely a matter of accountancy. But you would not have established really

§ 36. The Leader sent for would then proceed to select three colleagues who, together with himself, would form the Government. The Governor might help him with advice, but with advice only.

§ 37. When the Government had been formed the ministers would not be expected to begin by taking on their shoulders straight away the functions entrusted to them. Where necessary they would be left to take their own time in constructing departments suitable for the purpose. Let me illustrate the process by one case, that of finance. The new Minister of Finance would begin by selecting from the Civil Service the man whom he desired to act as permanent head of his new department. Here, again, a Governor of the right kind could be a great help to him, as the Governor should know the merits of the various officials. The Minister of Finance would then have every chance of securing a permanent head who would work in sympathy with the new system. Aided then by the advice of the permanent head he would proceed to construct his department from materials drawn from the service. Clearly he should be obliged to draw on the existing materials and not make any appointments outside the Service except with the special sanction of the Government of India. The other Ministers would each pursue the same course as near as may be. When each of them had fashioned their new departments from materials drawn from the existing services, the Cabinet would notify the Governor that on a specified date they were ready to take over the transferred powers and revenues, and the new Government would come into active being side by side with the old one. The condition of dyarchy would then have begun.

§ 38. You would then have in power a provincial ministry entrusted with specified powers and revenues for which ministers would be answerable to the Legislative Council, which, sitting in this capacity, would of course be presided over by its own Speaker. If they lost the confidence of the Council they would either have to resign or ask the Government to dissolve the Council—to appeal, in fact, from the Council to the Provincial electorate—that is one reason why it is so important to know who the Provincial electorate really are.

§ 39. I have assumed that the Government could be given the proportion of the revenues corresponding to the duties handed over to them. To ascertain this is merely a matter of accountancy. But you would not have established really

responsible government by handing over to the Councils a fixed proportion of the revenue. In order to introduce a real element of responsibility you must give the Council the power of raising new revenues. If, for instance, the Council wants to embark upon an extended policy of roads and bridges it must have the power of raising the additional taxes required; it must feel the responsibility of raising those taxes and so must the electors who are asking for better communications. The difficulty of finding new sources of taxation is a commonplace of Indian finance. I venture to say that the difficulty is far more due to the inherent weakness of the present system of government than to want of means on the part of the taxpayer. Considering the rise in the value of raw products which has taken place in the last fifteen years, new sources of taxation must be available. The fact is that a government which is in any sense representative can venture to raise taxes which an autocratic government would not dare to impose. This was certainly true of the Transvaal - General Botha's government imposed taxes which Lord Milner and Lord Selborne would never have ventured to touch.

§ 40. If, therefore, the Council decided that more revenue was needed for the duties entrusted to it, it would be open for the Provincial ministers to promote a Bill, just as a municipality in England promotes a Bill in Parliament to give it the new powers it requires. The Government of India would be the authority to deal with this Bill, which if passed would give the Provincial Council certain new and specified powers of taxation, within the limits of which it could raise or remit the new revenues they required. In this way the constructive work of initiating new sources of Provincial taxation would be laid on bodies answerable to Provincial electorates.

§ 41. It is important to realize the value of this process whereby each provincial authority can obtain from the National Government the additional powers which it finds in actual experience that it needs from time to time. There is nothing new in it, for it is the well-tried expedient whereby the great municipal authorities in England in the course of the last century have built up the wide powers they now wield. As a means of tracing in detail and with nicety the exact line which is to divide the spheres occupied by local authorities from the central authority, it is simply invaluable. It is capable of a very wide application. Take the case of local railways. A certain uniformity

responsible government by handing over to the Councils a fixed proportion of the revenue. In order to introduce a real element of responsibility you must give the Council the power of raising new revenues. If, for instance, the Council wants to embark upon an extended policy of roads and bridges it must have the power of raising the additional taxes required; it must feel the responsibility of raising those taxes and so must the electors who are asking for better communications. The difficulty of finding new sources of taxation is a commonplace of Indian finance. I venture to say that the difficulty is far more due to the inherent weakness of the present system of government than to want of means on the part of the taxpayer. Considering the rise in the value of raw products which has taken place in the last fifteen years, new sources of taxation must be available. The fact is that a government which is in any sense representative can venture to raise taxes which an autocratic government would not dare to impose. This was certainly true of the Transvaal - General Botha's government imposed taxes which Lord Milner and Lord Selborne would never have ventured to touch.

§ 40. If, therefore, the Council decided that more revenue was needed for the duties entrusted to it, it would be open for the Provincial ministers to promote a Bill, just as a municipality in England promotes a Bill in Parliament to give it the new powers it requires. The Government of India would be the authority to deal with this Bill, which if passed would give the Provincial Council certain new and specified powers of taxation, within the limits of which it could raise or remit the new revenues they required. In this way the constructive work of initiating new sources of Provincial taxation would be laid on bodies answerable to Provincial electorates.

§ 41. It is important to realize the value of this process whereby each provincial authority can obtain from the National Government the additional powers which it finds in actual experience that it needs from time to time. There is nothing new in it, for it is the well-tried expedient whereby the great municipal authorities in England in the course of the last century have built up the wide powers they now wield. As a means of tracing in detail and with nicety the exact line which is to divide the spheres occupied by local authorities from the central authority, it is simply invaluable. It is capable of a very wide application. Take the case of local railways. A certain uniformity

in the railway system of a great country like India is certainly important, and for that reason the Government of India has kept a tight grip on the whole railway administration. But I venture to say that all over India the extension of cultivation and local industries has been needlessly clogged for want of local facilities for moving produce and raw materials, &c., and the whole community has been impoverished accordingly. I say needlessly, because by the expedient of special legislation promoted by Provincial authorities, the free provision of local railways can be combined with a perfect security for the uniformity of the whole system. In the case of local railways I am not proposing that Provincial Councils should have power to build what railways they like. I merely suggest that they should be empowered to frame schemes, to embody those schemes in the form of Bills and submit those Bills to the Government of India. In the Bill it would be shown whether the Provincial Council desired to build and work the line or hand either the building or working over to a company. The financial proposals would be carefully outlined, the gauge, &c., specified and the terms upon which the proposed line could be eventually expropriated and consolidated with the national system prescribed. Such Bills would be handled like private Bills in the House of Commons. The Government of India would have to create the necessary legislative machinery for hearing the case for the Bill in Committee. Evidence would be taken including that of the Railway Commissioners, counsel would be heard and the project refused, accepted, or amended, as the Committee might advise. Subject to a perfect control on the part of the Government of India, local initiative would thus have a vent which it now lacks. At least this important reform would have been effected, that henceforth, where demand existed for a local railway, that demand could be made through the Provincial Council, and the Government of India would be put in the position of showing cause why the demand should not be granted.

§ 42. This power of promoting private Bills need not be limited to railways. If there is any other useful work which is not being done, but which the Provincial ministry thought they could do, given the powers, there would be nothing to prevent them applying to the Government of India for those powers by private Bill.

§ 43. So much for executive powers and for the relative revenues required to meet the expenses. The executive

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Abstract

in the railway system of a great country like India is certainly important, and for that reason the Government of India has kept a tight grip on the whole railway administration. But I venture to say that all over India the extension of cultivation and local industries has been needlessly clogged for want of local facilities for moving produce and raw materials, &c., and the whole community has been impoverished accordingly. I say needlessly, because by the expedient of special legislation promoted by Provincial authorities, the free provision of local railways can be combined with a perfect security for the uniformity of the whole system. In the case of local railways I am not proposing that Provincial Councils should have power to build what railways they like. I merely suggest that they should be empowered to frame schemes, to embody those schemes in the form of Bills and submit those Bills to the Government of India. In the Bill it would be shown whether the Provincial Council desired to build and work the line or hand either the building or working over to a company. The financial proposals would be carefully outlined, the gauge, &c., specified and the terms upon which the proposed line could be eventually expropriated and consolidated with the national system prescribed. Such Bills would be handled like private Bills in the House of Commons. The Government of India would have to create the necessary legislative machinery for hearing the case for the Bill in Committee. Evidence would be taken including that of the Railway Commissioners, counsel would be heard and the project refused, accepted, or amended, as the Committee might advise. Subject to a perfect control on the part of the Government of India, local initiative would thus have a vent which it now lacks. At least this important reform would have been effected, that henceforth, where demand existed for a local railway, that demand could be made through the Provincial Council, and the Government of India would be put in the position of showing cause why the demand should not be granted.

§ 42. This power of promoting private Bills need not be limited to railways. If there is any other useful work which is not being done, but which the Provincial ministry thought they could do, given the powers, there would be nothing to prevent them applying to the Government of India for those powers by private Bill.

§ 43. So much for executive powers and for the relative revenues required to meet the expenses. The executive

powers would carry with them also the necessary powers of legislation. The council, for instance, would have power to enact any law dealing with agriculture subject to the veto of the Governor, as in a self-governing Colony. But if the Council desired to attempt some measure of social reform, however humble, it should be encouraged to obtain the necessary powers for doing so. Take the question of cruelty to animals. Suppose some special form of cruelty was practised in a Province which enlightened opinion desired to suppress, the Council would instruct ministers to ask the Government of India to give them powers to deal with cruelty to animals. A Bill for that purpose would be framed, which, if passed, would enable the Council to legislate within the limits defined by the Act. It would, of course, lie within the option of the Indian Government to extend to all the Provinces any power which had been asked for and given to any one of them ; in this way the process of building up their legislative powers would be accelerated.

§ 44. Let us now suppose that the experiment had been tried for five years in all the Provinces, and the time had come to review the results. In one backward Province it might be found to have definitely failed. It might have proved that no government had been found to hold office long enough to provide continuous administration, or that too frequent dissolutions had been asked for. It might even be that religious sections had become embroiled and a movement for passive resistance on the part of one section had been set up, or that positive disorder had broken out, thereby imperilling the peace of the Province. Under such circumstances the experiment, having proved a failure, might have to lapse. The transferred powers would go back to the old Government and the Province would have to wait until it seemed ripe for a further essay in responsible government.

§ 45. In another Province nothing approaching disorder might have occurred, but the ministers and Council might have shrunk from the task of raising further revenues and no perceptible progress might have been made in extending roads and bridges, agriculture, and the other services committed to their charge. In a case like this the experiment would simply be renewed for another period of five years.

§ 46. These cases one trusts would be the exception. In some Provinces one would hope that the legislature and cabinet would have achieved definite improvements in the various services entrusted to their care. Let us suppose

powers would carry with them also the necessary powers of legislation. The council, for instance, would have power to enact any law dealing with agriculture subject to the veto of the Governor, as in a self-governing Colony. But if the Council desired to attempt some measure of social reform, however humble, it should be encouraged to obtain the necessary powers for doing so. Take the question of cruelty to animals. Suppose some special form of cruelty was practised in a Province which enlightened opinion desired to suppress, the Council would instruct ministers to ask the Government of India to give them powers to deal with cruelty to animals. A Bill for that purpose would be framed, which, if passed, would enable the Council to legislate within the limits defined by the Act. It would, of course, lie within the option of the Indian Government to extend to all the Provinces any power which had been asked for and given to any one of them; in this way the process of building up their legislative powers would be accelerated.

§ 44. Let us now suppose that the experiment had been tried for five years in all the Provinces, and the time had come to review the results. It might have proved that no government had been found to hold office long enough to provide continuous administration, or that too frequent dissolutions had been asked for. It might even be that religious sections had become embroiled and a movement for passive resistance on the part of one section had been set up, or that positive disorder had broken out, thereby imperilling the peace of the Province. Under such circumstances the experiment, having proved a failure, might have to lapse. The transferred powers would go back to the old Government and the Province would have to wait until it seemed ripe for a further essay in responsible government.

§ 45. In another Province nothing approaching disorder might have occurred, but the ministers and Council might have shrunk from the task of raising further revenues and no perceptible progress might have been made in extending roads and bridges, agriculture, and the other services committed to their charge. In a case like this the experiment would simply be renewed for another period of five years.

§ 46. These cases one trusts would be the exception. In some Provinces one would hope that the legislature and cabinet would have achieved definite improvements in the various services entrusted to their care. Let us suppose

that agricultural research and instruction were making strides and that progress had been made with roads and bridges, and that new sources of revenue had been evolved and imposed. All this would be taken as an indication that the Council and electorate were qualified to assume a fresh instalment of powers and revenues. Those in Group II together with their correlative revenues could then be transferred, if they had not been given in the first instalments. If they had been given, then Group III would be added. This would be an important step, as the powers in Group III are so nearly interconnected that they would all have to be transferred together. Such new portfolios as were necessary would have to be created for the purpose. And so the process would continue in course of years right down the list until at length responsible ministers had assumed the functions of civil and criminal justice, of imprisonment and police. The reserve powers would then all have vanished. The Provincial administration would have passed into the hands of the responsible government and the Governor would have retired into the same position as that filled by a Governor in the self-governing colonies. In the meantime you would have discovered, by the process of promoting legislation, the powers appropriate to a Provincial Government as distinguished from those appropriate to the National Government. You would also have transformed the machinery of Provincial government from one suitable to the present autocratic system to one suitable to self-government.

§ 47. To these proposals there are two objections, which will, I know, be raised. The first is that you cannot have two governments operating side by side, or in other words, a dyarchy. I have already dealt with that objection. Dyarchy is a normal feature of any system of self-government in any country so large that you must have Provincial assemblies as well as a National assembly. In India people don't understand dyarchy because the Provincial Governments are nothing but local departments of the Central Government. In Canada the Provincial Governments are nothing of the kind. They are separate governments each with a mainspring of their own.

§ 48. The second objection is a more serious one. It will be said that Provincial Councils instead of finding new sources of revenue, obtaining powers to levy them, and imposing the necessary taxation, will simply devote themselves to badgering the old Government to reduce their

The first part of the paper discusses the importance of the research topic and the need for a new approach to the study of the relationship between the firm and its environment. The second part of the paper discusses the theoretical framework of the study and the research hypotheses. The third part of the paper discusses the research methodology and the data collection process. The fourth part of the paper discusses the results of the study and the conclusions. The fifth part of the paper discusses the implications of the study for practice and for further research.

I have already dealt with that objection. Dyarchy is a normal feature of any system of self-government in any country so large that you must have Provincial assemblies as well as a National assembly. In India people don't understand dyarchy because the Provincial Governments are nothing but local departments of the Central Government. In Canada the Provincial Governments are nothing of the kind. They are separate governments each with a mainspring of their own.

§ 48. The second objection is a more serious one. It will be said that Provincial Councils instead of finding new sources of revenue, obtaining powers to levy them, and imposing the necessary taxation, will simply devote themselves to badgering the old Government to reduce their

expenditure on the reserved powers and hand over the savings for the service of the transferred powers. This they will have peculiar facilities for doing in their old capacity of advisory Council. I mention this criticism because it has been made to me by several people with whom I have discussed these proposals ; but I should have thought that it could have been barred by a standing order under which the Governor as President of the Advisory Council could rule the discussion of any such proposal as out of order. In any case it is one of those objections the validity of which can only be tested by actual trial. There are, I am sure, a number of other objections and it is as a first step towards getting them stated that I am trying to outline the scheme on paper.

§ 49. On the other hand, if the scheme is possible it has certain obvious merits. In the first place it proceeds on the basis of proved results. Think what a difference it would make if for five years responsible Indian ministers in some of the Provinces of India had shown that they could administer the powers in Group I without embroiling Hindus and Mohammedans, and that definite progress had been made under their hands. The definite success of two or three Provincial ministries would more than outweigh failure on the part of some others, for the others would be encouraged to try again in order to emulate the example of their more successful neighbours. The system in fact would put everybody on their mettle. The more backward Provinces would be inspired to emulate the standard of those which had proved themselves to be more advanced. Each Ministry and Council, moreover, would be desperately anxious to establish a case for the transfer of further powers and that case would have to rest on results and facts, not on words.

§ 50. Lastly, you would greatly increase the supply of Indians who had held responsible office. The Indians whom I have met who have served as Dewans in Native States have struck me as standing by themselves in a class apart. This is not merely because they are picked men. I believe their native ability is no greater than that of a number of other Indians I have met ; but the fact which seems to me to differentiate them from others is that, apart from the Princes, they are almost the only Indians who have carried great public responsibility on their shoulders. Responsibility in the long run is the only educator for responsible government. Five years of the system I have sketched would give you some dozens of men who had gone through the experience

Each Ministry and Council, moreover, would be desperately anxious to establish a case for the transfer of further powers and that case would have to rest on results and facts, not on words.

§ 50. Lastly, you would greatly increase the supply of Indians who had held responsible office. The Indians whom I have met who have served as Dewans in Native States have struck me as standing by themselves in a class apart. This is not merely because they are picked men. I believe their native ability is no greater than that of a number of other Indians I have met; but the fact which seems to me to differentiate them from others is that, apart from the Princes, they are almost the only Indians who have carried great public responsibility on their shoulders. Responsibility in the long run is the only educator for responsible government. Five years of the system I have sketched would give you some dozens of men who had gone through the experience

required for the making of statesmen and India might then begin to find her real leaders.

§ 51. Now suppose the reforms I have sketched had been successfully effected ; suppose that India were represented in the Imperial Parliament, and that the time had come when in almost all the Provinces of India the reserved powers had vanished and complete responsible government had been obtained. I suggest that under these conditions you could apply the principle of Dominion autonomy to the Government of India itself practically at one step. To begin with you would in your Provincial administration have developed a sufficient number of men with the requisite experience. On the other hand, such a reconstruction of the Imperial Government as I have foreshadowed would make the operation of establishing a Dominion Government in India far more easy than it would be at present. A reconstructed Imperial Government which represented all the Dominions including India would have been entrusted once for all with the conduct of Foreign Affairs and Imperial Defence. The foreign affairs of India, no less than those of England and the Dominions, would be in its hands. So would the Navy, so would the troops which guard the frontiers of the Commonwealth, including that of India. I am not saying that the Indian Government would not require forces of its own. I believe that all the National Governments whether those of the United Kingdom, the Dominions, or India, must all have citizen forces of their own ; such forces are required behind the Police if only to maintain internal order, as you see from the case of South Africa. In a war like the present, such citizen forces would of course pass automatically to the control of the Imperial Government ; but in peace they would be subject to the immediate control of the National Government, though subsidized by grants from the Imperial Government, which grants would carry with them the right of Imperial inspection. The Grant would presumably depend upon the results shown by inspection.

§ 52. I have suggested applying the principle of responsibility to the Provinces before applying it to the Government of India, if only because I believe you can go much faster if you leave the Government of India with undiminished powers of judging when to transfer reserve powers to the Provinces. You leave it, in fact, what it now is, an agent of the Imperial Government, until most of the Provinces have attained full responsible government, when I think you could change it at one stroke to a national government

required for the making of statesmen and India might then begin to find her real leaders.

§ 51. Now suppose the reforms I have sketched had been successfully effected ; suppose that India were represented in the Imperial Parliament, and that the time had come when in almost all the Provinces of India the reserved powers had vanished and complete responsible government had been obtained. I suggest that under these conditions you could apply the principle of Dominion autonomy to the Government of India itself practically at one step. To begin with you would in your Provincial administration have developed a sufficient number of men with the requisite experience. On the other hand, such a reconstruction of the Imperial Government as I have foreshadowed would make the operation of establishing a Dominion Government in India far more easy than it would be at present. A reconstructed Imperial Government which represented all the Dominions including India would have been entrusted once for all with the conduct of Foreign Affairs and Imperial Defence. The foreign affairs of India, no less than those of England and the Dominions, would be in its hands. So would the Navy, so would the troops which guard the frontiers of the Commonwealth, including that of India. I am not saying that the Indian Government would not require forces of its own. I believe that all the National Governments whether those of the United Kingdom, the Dominions, or India, must all have citizen forces of their own ; such forces are required behind the Police if only to maintain internal order, as you see from the case of South Africa. In a war like the present, such citizen forces would of course pass automatically to the control of the Imperial Government ; but in peace they would be subject to the immediate control of the National Government, though subsidized by grants from the Imperial Government, which grants would carry with them the right of Imperial inspection. The Grant would presumably depend upon the results shown by inspection.

§ 52. I have suggested applying the principle of responsibility to the Provinces before applying it to the Government of India, if only because I believe you can go much faster if you leave the Government of India with undiminished powers of judging when to transfer reserve powers to the Provinces. You leave it, in fact, what it now is, an agent of the Imperial Government, until most of the Provinces have attained full responsible government, when I think you could change it at one stroke to a national government

analogous to those of the Dominions. But don't forget that the Imperial Government of which it would be an agent would be constituted on different lines from the present Imperial Government. In the first place it would have time to attend to Indian affairs because it would have nothing to do with local British affairs. It would have time above all to hold inquiries on the subject in India and to get facts at first hand, and if it contained Indian members, as I hope and believe it must, these members could secure that such inquiries were held and that Parliament really attended to Indian affairs.

§ 53. The Government of India might, I suggest, be left a perfectly free hand in transferring new powers to the representative Provincial governments. The right to recall such powers might perhaps be reserved to Parliament, and exercised subject only to a parliamentary inquiry made on the spot. It might also be provided that, as in the days of the Company, the whole system should be made the subject of a parliamentary inquiry once every twenty years. Under the conditions I have outlined it may be assumed that Indian members of the Imperial Parliament would always find a place on such committees of inquiry.

§ 54. As my pen runs on I see a variety of directions in which this proposal requires to be worked out in greater detail than is possible in the compass of this letter. But the whole idea is so extremely tentative that I feel it would be waste of time for one who knows so little of India and its Government to elaborate further, without first eliciting the criticism of better-informed people on the outlines. It is in order to elicit such criticism that I am sending you this sketch. I should like to know whether you see any objection to my sending copies of this letter to a few dozen friends, Indian and Official, with whom I have discussed these matters in the last few months. That is the best means I have yet discovered of putting such proposals to the test in the first instance. I want criticism first and foremost. But having made your criticisms I will ask you to remember that not only is there no proposed scheme, but also no existing scheme of government which is not open to criticism. No criticism is fatal which does not succeed in demonstrating that a proposal will not work at all and will lead to a breakdown. Having noted your criticisms, I then want you to look at the idea again from a new point of view and ask yourself whether in spite of the difficulties you have noted the scheme could be made to work at all, and if so, how those

analogous to those of the Dominions. But don't forget that the Imperial Government of which it would be an agent would be constituted on different lines from the present Imperial Government. In the first place it would have time to attend to Indian affairs because it would have nothing to do with local British affairs. It would have time above all to hold inquiries on the subject in India and to get facts at first hand, and if it contained Indian members, as I hope and believe it must, these members could secure that such inquiries were held and that Parliament really attended to Indian affairs.

§ 53. The Government of India might, I suggest, be left a perfectly free hand in transferring new powers to the representative Provincial governments. The right to recall such powers might perhaps be reserved to Parliament, and exercised subject only to a parliamentary inquiry made on the spot. It might also be provided that, as in the days of the Company, the whole system should be made the subject of a parliamentary inquiry once every twenty years. Under the conditions I have outlined it may be assumed that Indian members of the Imperial Parliament would always find a place on such committees of inquiry.

§ 54. As my pen runs on I see a variety of directions in which this proposal requires to be worked out in greater detail than is possible in the compass of this letter. But the whole idea is so extremely tentative that I feel it would be waste of time for one who knows so little of India and its Government to elaborate further, without first eliciting the criticism of better-informed people on the outlines. It is in order to elicit such criticism that I am sending you this sketch. I should like to know whether you see any objection to my sending copies of this letter to a few dozen friends, Indian and Official, with whom I have discussed these matters in the last few months. That is the best means I have yet discovered of putting such proposals to the test in the first instance. I want criticism first and foremost. But having made your criticisms I will ask you to remember that not only is there no proposed scheme, but also no existing scheme of government which is not open to criticism. No criticism is fatal which does not succeed in demonstrating that a proposal will not work at all and will lead to a breakdown. Having noted your criticisms, I then want you to look at the idea again from a new point of view and ask yourself whether in spite of the difficulties you have noted the scheme could be made to work at all, and if so, how those

difficulties can be minimized, and how the proposal can be improved. In fact I should like to have your constructive criticism, if you think that the proposal as a whole is worth further consideration and amendment.

§ 55. More especially I want to elicit your opinion on the reasons adduced at the opening of this letter which have driven me to the view that, while Imperial reformers find themselves driven up against the question of Indian reform, so will Indian reformers find themselves forced to consider the question of Imperial reform. As I have said in my *Letter to the People of India*, which I am publishing, I have found that it is practically impossible to study the Imperial problem without trespassing on the problem of the future Government of India.

Yours sincerely,

L. CURTIS.

PREFATORY NOTE

This pamphlet contains some of the comments received on my letter of April 6, 1917, to the Hon. Mr. Bhupendra Nath Basu, circulated as Indian Studies No. 2. It includes papers from Indians and Europeans who are servants of Government and from others who are not.

The comments are often intelligible only by reference to the letter to which they refer, copies of which are obtainable on application to Messrs. A. H. Wheeler & Co., of 15 Elgin Road, Allahabad.

It is clear to me, from a perusal of these criticisms, that in certain passages of my letter I failed to make my real meaning understood. Herein lies one of the most valuable features of this particular method. The writer is thus enabled to discover where his own explanations are obscure, and so to remove the obscurities, when he reaches the stage of presenting his final results. The matter is mentioned here, merely because the misunderstanding of one critic is apt to put subsequent critics off the track. I will, therefore, ask every one who reads these criticisms to interpret the meaning of my letter from its text, and not from the comments made by others upon it.

I must ask all into whose hands these papers may come to regard them as private, in the sense that no public reference of any kind may be made to them. These Indian studies are not published, and are printed only in order to obtain a wide range of informed and considered criticism upon the accuracy of the statements they contain, and the soundness of the conclusions based on those statements. Naturally I cannot hold myself bound by any statement of fact or opinion so long as it is circulated privately and merely for the purpose of eliciting correction and criticism.

LIONEL CURTIS,

NO. 1. FROM AN ADVOCATE

I told you at the commencement that I agreed with you that development along provincial lines appealed to me more than a reconstitution of the fabric from above downwards. Your scheme had to my mind the advantage of involving very little dislocation in the existing order of things. So far as the principle of it is concerned I am with you—subject to the assumption that you advocate the same change in the personnel of the Imperial Legislative Council as you do in the case of the Provincial Assemblies. I take it that you do not stand for an official majority—or any such constitution of them as would secure that end—in Legislative Councils. Otherwise I am afraid you would be leaving the final pronouncement of the success or failure of provincial administration with people who may honestly decline to appreciate results which the subordinate assemblies may have been straining every nerve to achieve. In addition they may not realize the necessity of private money bills—which you empower your provincial councils to promote—and the rejection of which may and probably would militate against the exercise of all initiative. But perhaps I am dwelling on the point unnecessarily and you have realized the anomaly which would result better than myself.

So far as the Provincial Assemblies are concerned and the scheme of devolution you suggest, I must say that you have given the problem of our administration more attention than any other Englishman I know, and the thing is an earnest of your sympathetic and serious effort to not only improve the system as it exists, but to set us on the path which would ultimately carry us to the ideal of a fully responsible and autonomous government. I have a suggestion to make, to which I will revert later, for the present I should like to know if the grouping of the various functions of the government of a province as you have planned it represents your final and considered opinion or if it is merely by way of illustration, more or less tentative in its character. One difficulty which strikes me—if you mean the division to stand as it does—is that you put Agriculture, Irrigation, and Revenue in three different groups. Apart from the fact that they are so closely connected and inter-related, it may be that an improvement under one heading would be nullified by an excess of imposition under another because while you leave agriculture to be dealt with by the government exercising the transferred powers, a redistribution or resettlement of revenue would be in the hands of the other body. Besides I do not know how far people would agree to leave Education in the hands of the 'bureaucratic government'—if you would let me give that name to the Provincial government exercising the reserved powers, and call it 'popular government' in its other capacity. The persistent struggle of the

Besides I do not know how far people would agree to leave Education in the hands of the 'bureaucratic government'—if you would let me give that name to the Provincial government exercising the reserved powers, and call it 'popular government' in its other capacity. The persistent struggle of the

Indian Nationalists has been to control the Education policy of the government—doubtless with a view to making it compulsory and where possible free in its primary steps. You would be the last person to quarrel with that wish, and yet if you leave it to the third quinquennial of their probation you would practically be postponing the inauguration of a nationalist policy to a period which may with luck be reached in fifteen years or may be delayed longer. I would suggest that you give us Primary Education at least in the first group of powers which you propose to transfer to us, leaving secondary education to the second period of our novitiate. I am afraid I have kept you too long over details which perhaps you yourself do not consider as finally settled, and which you intend casting into a different shape. You will note that Archaeology, Registration, Bridges, and Local Railways do not afford much scope for initiative or talent—except so far as departmental efficiency is concerned—and may not furnish any adequate tests of failure or success.

Coming to the main idea of your scheme I am glad you give us a direct franchise. A certain number of difficulties will doubtless appear—we are not immune from them now, but it will stop the voting of the councils being gerrymandered as it is at present by nominating people who in some cases are not even acquainted with the language in which the proceedings are conducted and who cannot take any independent line of thought or weigh the issues involved in the question before them. But you will remember that elections here are mostly fought and won on personal grounds. There are no party lines along which you find a cleavage in public opinion. The result of an election is generally due to canvassing conducted on purely non-party grounds. The elector does not choose between two policies but only between two persons. I am emphasizing this with a view to point to a difficulty which I anticipate would be invariably presenting itself whenever a 'popular government' had broken down and an election had become necessary. The candidates would always be going to the electors on isolated issues and seldom on matters of policy. Whenever a government was defeated it would be because the government had failed to carry the house with it on any given measure. What I mean is that in the absence of any 'parties' the dissolutions would be too frequent if you provide that a government has to dissolve whenever it is defeated. In going to the electors the 'popular government' would not only be dissolving itself but also the 'bureaucratic government' and consequently bringing the entire machinery to a stop. If they do not dissolve on one measure there is no reason why they should dissolve over another—if they do that every time then any scratch division may precipitate the whole thing into disorder. Would it not be better to leave the government in power for the remaining duration of their term, to be punished by the electors afterwards, or to provide for the resignation of the offending

Abstract

The purpose of this study was to determine whether there were differences in the prevalence of risk factors for coronary artery disease between two groups of men who had been exposed to asbestos during their working lives. The subjects were divided into two groups based on the duration of exposure to asbestos. The first group consisted of men who had been exposed to asbestos for less than 10 years, and the second group consisted of men who had been exposed to asbestos for 10 years or more. The results showed that the prevalence of risk factors for coronary artery disease was significantly higher in the group exposed to asbestos for 10 years or more compared to the group exposed for less than 10 years.

minister, or the ministry, the council having the power to elect a different person or set of persons to the cabinet? If this is not done it may have the result of practically introducing government by referendum, as isolated issues only will have to be declared on by the electorate, and their decision on them would not obviate the necessity of a fresh reference on the very next question taken up by the ministry. I am putting an extreme view, but it is not by any means an impossible view. Granting that the dissolutions are not quite so frequent, they may still be too many for a settled and smooth working of the government. A personal verdict— as the passing of an adverse decision in the present case would be— should not be a sufficient reason for sending the government to the country.

There is another aspect to which I should like to invite your attention. You say with a great deal of truth that the imposing of taxation should be the test of a successful responsible government, also that an indigenous government can discover and tap sources not visible or available to a foreign government. I would have nothing to say to it if the government were of one particular description. But you are giving us a government which would be partly alien and partly responsible. Both will have their particular sphere of activity to work and develop. Supposing for instance that you put us in charge of primary education in the first quinquennial and the government wishes to devote say ten lacs of rupees over and above the proportionate budget grant to that purpose, it is quite conceivable that the bureaucratic government may also wish for a similar increase in the grant for the C.I.D. Both would recoil on the poor taxpayer, and two governments working side by side—possibly in a spirit of rivalry, not to be outdone by the other in efficiency or in the output of its efforts, where one would be interested in justifying the retention of power in its hands, and the other would be straining to deserve a fresh instalment of powers— would grind that individual down between them. Responsible government implies the power of taxation, it also should imply the power of retrenchment. You expressly bar this privilege, even to the extent of criticizing the budget. The criticism of the budget is not of much value now, as not one of the suggestions is ever accepted, but there is some curious consolation for people in having a right, although it is a purely nominal right. You also incidentally shift the responsibility on to the government, as now, with the pretence of a discussion on the budget, the council may be said to pass the budget, then the odium would be entirely on the government. This, however, is not a situation for us to trouble over. But going back to the line of my argument you will concede that there is no people that relishes being taxed. Add to it the difficulty that taxation will not by any means be confined to one government, and whatever taxation is imposed by the popular government would not always be in furtherance of a policy. If you look at all this in conjunction with the fact that the odium of taxation would mainly

Abstract

minister, or the ministry, the council having the power to elect a different person or set of persons to the cabinet? If this is not done it may have the result of practically introducing government by referendum, as isolated issues only will have to be declared on by the electorate, and their decision on them would not obviate the necessity of a fresh reference on the very next question taken up by the ministry. I am putting an extreme view, but it is not by any means an impossible view. Granting that the dissolutions are not quite so frequent, they may still be too many for a settled and smooth working of the government. A personal verdict— as the passing of an adverse decision in the present case would be— should not be a sufficient reason for sending the government to the country.

There is another aspect to which I should like to invite your attention. You say with a great deal of truth that the imposing of taxation should be the test of a successful responsible government, also that an indigenous government can discover and tap sources not visible or available to a foreign government. I would have nothing to say to it if the government were of one particular description. But you are giving us a government which would be partly alien and partly responsible. Both will have their particular sphere of activity to work and develop. Supposing for instance that you put us in charge of primary education in the first quinquennial and the government wishes to devote say ten lacs of rupees over and above the proportionate budget grant to that purpose, it is quite conceivable that the bureaucratic government may also wish for a similar increase in the grant for the C.I.D. Both would recoil on the poor taxpayer, and two governments working side by side—possibly in a spirit of rivalry, not to be outdone by the other in efficiency or in the output of its efforts, where one would be interested in justifying the retention of power in its hands, and the other would be straining to deserve a fresh instalment of powers— would grind that individual down between them. Responsible government implies the power of taxation, it also should imply the power of retrenchment. You expressly bar this privilege, even to the extent of criticizing the budget. The criticism of the budget is not of much value now, as not one of the suggestions is ever accepted, but there is some curious consolation for people in having a right, although it is a purely nominal right. You also incidentally shift the responsibility on to the government, as now, with the pretence of a discussion on the budget, the council may be said to pass the budget, then the odium would be entirely on the government. This, however, is not a situation for us to trouble over. But going back to the line of my argument you will concede that there is no people that relishes being taxed. Add to it the difficulty that taxation will not by any means be confined to one government, and whatever taxation is imposed by the popular government would not always be in furtherance of a policy. If you look at all this in conjunction with the fact that the odium of taxation would mainly

rest on individuals and would be exploited as such you would find that the position of the ministry would by no means be a happy one. You will also not lose sight of the fact that the popular government, with their want of experience, and without the advantage of smooth running departments at their back, would work less efficiently, and they would not only be in the invidious position of constantly suffering by comparison with the 'bureaucratic' government, but would invite criticism and opposition based on standards furnished by the latter. They would also be in the unfortunate position of not being able to effect improvements without resorting to fresh taxation. The great danger would be that the 'bureaucratic government' would develop or lapse into a more or less permanent opposition—and here you will kindly read bureaucratic government as including the bureaucracy in general and also the Anglo-Indian Press. I do not know if your stay here has enabled you to appreciate the 'missionary' work, if I may so call it, that is carried on by officials in charge of divisions or districts—when they go on tour or when people of a certain class go to visit them. This agitation is neither less active nor less potent than the popular agitation which comes in for official displeasure. With this 'missionary' body organized as no other body can be organized, throwing the weight of its disapproval against us I can imagine an innumerable host of difficulties cropping up in the way of the 'popular government'.

I am sorry to seem to be critical. No scheme on paper could ever meet all the requirements. A smooth working machinery can only be evolved gradually, and all suggestions are bound to have angles which experience alone could rub off. It is not in a critical spirit that I have written the foregoing pages, and I hope you won't take them in that light. We are thankful for any small mercies that come our way, and your scheme, if introduced, would be a great advance on the existing state of affairs. The present political situation has unnecessarily been rendered acute, and the tension is equally unnecessarily being kept up by the silence of the Imperial Government as to the future policy of the government of the country. We would welcome any step forward and your scheme is a long step forward. My remarks only represent the difficulties I anticipate, and an anomaly or two which I suspect might arise. My views have necessarily to be amateurish. I have absolutely no experience of the working of the administration, and you will keep this in mind while reading my letter.

I mentioned above that I had a suggestion to make. I will advert to it now. It is that instead of splitting up the council into two distinct entities as you do, you should keep the council one, and divide the functions into parts. The 'reserved power' to be administered as now—but the voice of the council—elected on lines that you suggest—to be binding *qua* the transferred powers. The government should set apart some powers—which you call

rest on individuals and would be exploited as such you would find that the position of the ministry would by no means be a happy one. You will also not lose sight of the fact that the popular government, with their want of experience, and without the advantage of smooth running departments at their back, would work less efficiently, and they would not only be in the invidious position of constantly suffering by comparison with the 'bureaucratic' government, but would invite criticism and opposition based on standards furnished by the latter. They would also be in the unfortunate position of not being able to effect improvements without resorting to fresh taxation. The great danger would be that the 'bureaucratic government' would develop or lapse into a more or less permanent opposition—and here you will kindly read bureaucratic government as including the bureaucracy in general and also the Anglo-Indian Press. I do not know if your stay here has enabled you to appreciate the 'missionary' work, if I may so call it, that is carried on by officials—in charge of divisions or districts—when they go on tour or when people of a certain class go to visit them. This agitation is neither less active nor less potent than the popular agitation which comes in for official displeasure. With this 'missionary' body organized as no other body can be organized, throwing the weight of its disapproval against us I can imagine an innumerable host of difficulties cropping up in the way of the 'popular government'.

I am sorry to seem to be critical. No scheme on paper could ever meet all the requirements. A smooth working machinery can only be evolved gradually, and all suggestions are bound to have angles which experience alone could rub off. It is not in a critical spirit that I have written the foregoing pages, and I hope you won't take them in that light. We are thankful for any small mercies that come our way, and your scheme, if introduced, would be a great advance on the existing state of affairs. The present political situation has unnecessarily been rendered acute, and the tension is equally unnecessarily being kept up by the silence of the Imperial Government as to the future policy of the government of the country. We would welcome any step forward and your scheme is a long step forward. My remarks only represent the difficulties I anticipate, and an anomaly or two which I suspect might arise. My views have necessarily to be amateurish. I have absolutely no experience of the working of the administration, and you will keep this in mind while reading my letter.

I mentioned above that I had a suggestion to make. I will advert to it now. It is that instead of splitting up the council into two distinct entities as you do, you should keep the council one, and divide the functions into parts. The 'reserved power' to be administered as now—but the voice of the council—elected on lines that you suggest—to be binding *qua* the transferred powers. The government should set apart some powers—which you call

transferred—and in dealing with these the council should be autonomous, i.e. should be given the power to bind the government with its decision. The minister in charge of these powers should be the nominee of and responsible to the council. The method of transmission of powers periodically should be the same as you suggest. I will concede at once that this is not instituting responsible government in the strict sense. But the advantages I foresee are that it will not necessitate so many dissolutions and that it will give us a permanent opposition—for the time being—in the shape of the officials. It will help to keep the elected element together, till such time as a spirit of party government has had time to develop. For the exercise of control over the transferred powers the members of the council will inevitably fall into groups according as they are progressive or are more cautiously inclined. The electors will have that criterion in view in giving their vote to one or the other candidate. The responsibility for the administration of the transferred powers will have been brought home to them by the time they seek re-election and their conduct could then be pronounced upon. All that I claim is that this would give the members a period of probation in responsibility. After the thing has worked for twenty years and two or three groups of powers have been made over to them, people will acquire the necessary habit of mind, and a certain difference in temperaments will appear along which a party spirit can crystallize.

Here I should like to mention the qualifications I would suggest for a franchise. I would give a vote to—

- (i) Every master of arts or a person holding a corresponding degree.
- (ii) Every graduate of three years' standing.
- (iii) Every person assessable with income tax.
- (iv) Every person paying government revenue to the extent of Rs. 500 a year or over.

For the present I would give the vote to men only. But I would allow every woman—qualified according to one or other of the above heads—to be brought on the roll of electors if she applied to be so entered. I need hardly say that I would not give more than one vote to any person.

No. 2. FROM AN ADVOCATE

Para. 12.

The great merit of the scheme proposed over some of the other schemes is that it avoids jerks during our advancement towards the final goal. But I submit that the transformation of the Indian Council into a representative body should not be postponed for the following reasons:

The functions of the Indian Council and the Provincial Council will (1) either overlap each other, or (2) without overlapping they will

transferred—and in dealing with these the council should be autonomous, i.e. should be given the power to bind the government with its decision. The minister in charge of these powers should be the nominee of and responsible to the council. The method of transmission of powers periodically should be the same as you suggest. I will concede at once that this is not instituting responsible government in the strict sense. But the advantages I foresee are that it will not necessitate so many dissolutions and that it will give us a permanent opposition—for the time being—in the shape of the officials. It will help to keep the elected element together, till such time as a spirit of party government has had time to develop. For the exercise of control over the transferred powers the members of the council will inevitably fall into groups according as they are progressive or are more cautiously inclined. The electors will have that criterion in view in giving their vote to one or the other candidate. The responsibility for the administration of the transferred powers will have been brought home to them by the time they seek re-election and their conduct could then be pronounced upon. All that I claim is that this would give the members a period of probation in responsibility. Para. 12.

The great merit of the scheme proposed over some of the other schemes is that it avoids jerks during our advancement towards the final goal. But I submit that the transformation of the Indian Council into a representative body should not be postponed for the following reasons:

The functions of the Indian Council and the Provincial Council will (1) either overlap each other, or (2) without overlapping they will

be so connected as to make co-operation between the two necessary in order to ensure success in the administration of the country, or (3) they will be quite separate and unconnected with each other. In cases nos. 1 and 2 the Indian Council, practically representing the bureaucracy, will not be able to co-operate with a Provincial Council representing the people and responsible to them, as an Indian Council which is itself representative of the people would. In case no. 3 there should be no difficulty in one set of people's representatives managing the Provincial affairs and another set managing the Imperial affairs. The illustration taken from military organization does not apply, as in the case of the movement of a battalion each individual has to move with the company and with the battalion simultaneously, while in the case under our consideration all that the people (the electors) have to do at about the same time is to elect two different sets of men for different purposes, and if both sets are competent (and there is no reason to believe that we can get competent men for one kind of work but not for the other) there should be no difficulty. On the other hand the two Councils will be in a better position to work in harmony.

Para. 26.

In this paragraph the necessity for nomination is assumed. It is submitted that if there be any section of our population, no member of which is able to think and form opinions on public affairs, they can have no opinion to voice, and they need not be represented. But even if a small number of them have opinions which need be voiced they should be allowed to choose their representative instead of one being chosen for them by others. Such a representative need not be a member of this section of the population.

Para. 34.

How is the judgement about the success and failure of the arrangement to be arrived at? Can it be said that the people can confide in the Government of India as at present constituted for judging the result of the arrangement? It will certainly be difficult for the Government of India representing the bureaucracy to act as an impartial judge. The recent speech of Sir M. O'Dwyer in the Imperial Council shows the frank attitude of the bulk of the Indian Civil Service towards the idea of self-government in India. I am not ignoring the fact that there are conspicuous exceptions to this, specially in our province. But I believe that the attitude of the majority of the members of the Civil Service is the same as that of Sir M. O'Dwyer. The utterances of the Anglo-Indian newspapers, who chiefly represent the bureaucracy, prove the same thing. The faults of the new Government will be magnified and their achievements will be minimized. A Backrid or Mohurram riot (which are not unusual under the present régime) will be pointed out as proof of the inefficiency of the new régime.

be so connected as to make co-operation between the two necessary in order to ensure success in the administration of the country, or (3) they will be quite separate and unconnected with each other. In cases nos. 1 and 2 the Indian Council, practically representing the bureaucracy, will not be able to co-operate with a Provincial Council representing the people and responsible to them, as an Indian Council which is itself representative of the people would. In case no. 3 there should be no difficulty in one set of people's representatives managing the Provincial affairs and another set managing the Imperial affairs. The illustration taken from military organization does not apply, as in the case of the movement of a battalion each individual has to move with the company and with the battalion simultaneously, while in the case under our consideration all that the people (the electors) have to do at about the same time is to elect two different sets of men for different purposes, and if both sets are competent (and there is no reason to believe that we can get competent men for one kind of work but not for the other) there should be no difficulty. On the other hand the two Councils will be in a better position to work in harmony.

Para. 26.

It is submitted that if there be any section of our population, no member of which is able to think and form opinions on public affairs, they can have no opinion to voice, and they need not be represented. But even if a small number of them have opinions which need be voiced they should be allowed to choose their representative instead of one being chosen for them by others. Such a representative need not be a member of this section of the population.

Para. 34.

How is the judgement about the success and failure of the arrangement to be arrived at? Can it be said that the people can confide in the Government of India as at present constituted for judging the result of the arrangement? It will certainly be difficult for the Government of India representing the bureaucracy to act as an impartial judge. The recent speech of Sir M. O'Dwyer in the Imperial Council shows the frank attitude of the bulk of the Indian Civil Service towards the idea of self-government in India. I am not ignoring the fact that there are conspicuous exceptions to this, specially in our province. But I believe that the attitude of the majority of the members of the Civil Service is the same as that of Sir M. O'Dwyer. The utterances of the Anglo-Indian newspapers, who chiefly represent the bureaucracy, prove the same thing. The faults of the new Government will be magnified and their achievements will be minimized. A Backrid or Mohurram riot (which are not unusual under the present régime) will be pointed out as proof of the inefficiency of the new régime.

Provision should be made, in order that, when the Government of India expresses an adverse opinion on the work of the new Provincial Councils, some other body (e.g. a Parliamentary Committee) may judge its work.

If the Provincial Council's power of taxation is to depend on the sanction of the Imperial Council, the necessity of the latter body being transformed into a body representing the people, on the lines proposed by the Congress and Moslem League, becomes evident. If the Imperial Council is not so transformed, the two Councils may not be able to work in harmony with each other, just as the official element and the people's representatives in the existing Councils are unable to work in harmony at present.

Para. 43.

Under this scheme the power of legislation which a Provincial Council will have will be rather meagre. These limitations to the powers of the Provincial Councils will make real autonomy in a Province too slow a process. And the procedure which the Provincial Council will have to follow will be a cumbrous one.

As I have already submitted, the success of the scheme will to a very large extent depend on the co-operation, help, and goodwill of the Government of India. The Government of India as at present constituted represent none but the bureaucracy. That the bureaucracy will be unwilling to part with their power is natural. I believe that voices such as have been disclosed in the recent speech of Sir M. O'Dwyer will predominate in the Council of the Government of India, with the result that there will be no harmony between the representative portion of the Provincial Government and the Government of India, and the whole scheme may fail. The India Councils Act, 1892, was passed in order to concede the principle of representation to the people by election. But the rules under the Act were framed by the Government of India. And I may be permitted to quote what Mr. Gokhale said about these rules. He said: 'In regard to these rules, I will not say that they have been deliberately so framed as to defeat the object of the Act of 1892, but I will say this, that if the officer who drafted them had been asked to sit down with the deliberate purpose of framing a scheme to defeat that object, he could not have done better.' The same may be done again.

Representative government can have real success or failure only if it can act with freedom within its own sphere. If its work is to depend to a considerable extent on the co-operation of another Government, it should not be held responsible for its failure.

the information science community. The first of these is the fact that the information science community has a long history of being a community of scholars, rather than a community of practitioners. This has led to a focus on theoretical research, rather than on applied research. The second of these is the fact that the information science community has a long history of being a community of researchers, rather than a community of students. This has led to a focus on research, rather than on teaching. The third of these is the fact that the information science community has a long history of being a community of researchers, rather than a community of students. This has led to a focus on research, rather than on teaching.

CONCLUSION

The information science community has a long history of being a community of scholars, rather than a community of practitioners. This has led to a focus on theoretical research, rather than on applied research. The second of these is the fact that the information science community has a long history of being a community of researchers, rather than a community of students. This has led to a focus on research, rather than on teaching. The third of these is the fact that the information science community has a long history of being a community of researchers, rather than a community of students. This has led to a focus on research, rather than on teaching. The information science community has a long history of being a community of scholars, rather than a community of practitioners. The same may be done again.

Representative government can have real success or failure only if it can act with freedom within its own sphere. If its work is to depend to a considerable extent on the co-operation of another Government, it should not be held responsible for its failure.

NO. 3. FROM AN EDUCATED MEMBER OF THE DEPRESSED
CASTES IN SOUTHERN INDIA

I am not satisfied that a democratic form of Self-Government ought to be the trend of political evolution in India, but accepting that as the goal, I would have your proposal of progress by instalments of a Department or two at a time, as representing the second stage. The preliminary step should be a rapid expansion of Local Self-Government. Parliamentary institutions have not proved much of a success where the people have not been previously trained in the management of local affairs, as for example on the continent where their comparative failure has been correctly attributed (by Professor Gueist) to the fact that local Institutions were not copied from England when the machinery of the central government was reproduced. I believe the same fate will overtake Indian Parliamentary Government, if it is not preceded by measures to train the people in Local Self-Government. Local and District Boards should first be reconstituted on an elective basis and freed altogether from official domination. They should have the control of Primary and Secondary education and of local dispensaries and local sanitation. I would go further and revive the instinct of co-operative effort still latent in the village, and towards this end I would entrust the village assembly with the collection of the Revenue. I would also give it the power to levy a small cess to spend, along with a grant equal in amount, in repairing village roads and tanks. The privilege would be conceded only to such villages as maintain a school of their own.

This is the conclusion to which your line of argument leads me. If, as you reason, the provincial Government are no more than the instruments of the Government of India, the District officials are quite as much the limbs of the central authority. As with so many other things introduced into India the growth has been from above downwards. If that process is to be reversed, we should start not at an intermediate stage like the provincial Government but from the village and the district. The revival and expansion of local and municipal institutions on an elective basis will alone give the people the opportunity, which they now lack, of returning to the legislative councils members who are their natural leaders, and whose capacity and integrity have been tested by the part they played in the management of local affairs. Till that opportunity is provided and availed of, the legislative councils should continue as advisory bodies. The official vote should be retained but reduced to a minority, four-fifths of the remaining number should be elected, the rest being reserved for the representation by nomination of backward communities. When the time for an instalment of self-government arrives the first departments to be assigned should be Education, Local and Municipal Departments, and that dealing with religious endowments and charities. Agriculture, Archaeology, and the Museums do not

REPORT OF THE
COMMISSION ON THE ORGANIZATION OF THE MEDICAL PROFESSION

THE COMMISSION ON THE ORGANIZATION OF THE MEDICAL PROFESSION, created by the American Medical Association in 1918, has the honor to submit herewith its report. The Commission was organized in 1918, and since that time has been engaged in a study of the problems connected with the organization of the medical profession. It has held numerous public hearings, and has received many suggestions from the public and from the medical profession. It has also conducted extensive research into the various phases of the problem, and has endeavored to arrive at a solution which would be in the best interests of the public and of the medical profession. The Commission believes that the following recommendations will bring about a more efficient and economical organization of the medical profession, and will also result in a more efficient and economical delivery of medical services to the public.

1. The Commission recommends that the American Medical Association be reorganized so that it will be able to represent the interests of the medical profession more effectively.
2. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.
3. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.
4. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.
5. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.
6. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.
7. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.
8. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.
9. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.
10. The Commission recommends that the American Medical Association be authorized to negotiate with the Federal Government for the regulation of the medical profession.

involve any of the important elements in self-governing, and are too minor to rouse a sense of responsibility. Whenever the time for an instalment of Self-government may arrive I think there should not be any delay in establishing local self-government on the lines I have indicated. Even for an oriental people there has been too much of governing in India.

Summary of Conclusions reached as a Result of the Study of the Problems raised by the demand for Home Rule.

I. The governing apparatus of an urban civilization is unsuited to the requirements of Indian civilization, which is still rural and largely spiritual.

II. Neither the British nor the educated Indians are competent to decide the form of responsible government in India. The former are too self-assertive and too self-confident, and the latter too imitative. What form responsible government should take in India should be decided by the people themselves, throbbing with a genuine nationalism, not the blatant nationalism of the press and the platform which is little more than a demand for a re-arrangement of Indian Society in which the educated classes wield the predominant influence.

III. Every effort should, therefore, be made to revive Indian Nationalism on lines in consonance with the social and religious ideals of the people, and with due regard to the serious limitations imposed by climatic conditions on the standards of work and discipline and physical efficiency by

1. The grant of a full measure of local self-government on the lines obtaining in England. Local and District Boards should be absolutely freed from official domination.

2. The revival of the village assembly and entrusting it with the collection of revenue, the detection of encroachments and crime, the care of communal lands, tanks, and roads. The village officials should be the servants of the assembly. It should have powers to levy cesses or their equivalent in labour for the maintenance of a primary school, of village roads and tanks. The funds so raised should be supplemented by a grant from the District Board or from the government or from both. The assembly should be liable to fine or other suitable punishment for failure to discharge properly their duties.

3. The re-formation of provinces so as not to divide between two or more of them people with ethnic and linguistic affinities.

4. By restoring ancient dynasties wherever there are evidences of a distinctive culture, tradition, and art.

5. By nationalizing education by (a) insisting on a knowledge of Indian history, Indian sociology, and Indian religion on the part of teachers; (b) drawing off early to institutions specially created for the purpose students who desire to qualify for government service;

100

(c) as far as possible employing Indian agency ; (d) encouraging the production of vernacular literature ; (e) instituting research scholarships in oriental sciences and arts as Architecture, music, painting, medicine, sociology, eugenics, &c. ; (f) introducing compulsory education on the line of Mr. Ghokhale's bill.

6. By constructing public buildings as far as possible in the Indian style of Architecture.

7. Reducing the poverty of the people by (a) reducing the pressure on land by encouraging handicrafts on the lines hand-loom weaving has been encouraged, and by establishing polytechnic schools ; (b) preventing the minute sub-division of land ; (c) the consolidation of holdings ; (d) increasing the security of tenure ; (e) lessening the severity of usury laws.

8. Restoring the human touch in the administration which is now much too scientific and German in its thoroughness.

9. By recognizing in all matters that India has been in permanent insurrection for ages against the principles of the strenuous life and free competition, and cannot therefore rapidly adjust without suffering and demoralization to the forces of British Individualism.

IV. The establishment of local self-government on the lines set forth above will for the first time provide the people with the opportunity of testing the capacity and merits of those who seek election to the legislative councils. Till an intelligent electorate is established and genuine nationalism revives, the legislative councils should continue as advisory, but the number of elected members should exceed the number of official and nominated members together, minorities and backward communities being represented by nomination. An upper chamber should be constituted to represent the more conservative elements in society. Bills relating to social reform, inheritance laws, and religious and charitable endowments, passed by the two chambers, should have the force of law, subject of course to veto by the Governor-in-council.

V. The Imperial Legislative council should be constituted on the same lines as the provincial councils.

VI. The functions of the Secretary of State's Council should be taken over by a Committee of the House of Commons consisting of members who at the time of nomination have been in residence in England for at least ten years previously, the qualification not being insisted on in the case of the Indian members, who should number at least five.

VII. The European element should continue to predominate as at present in the Civil Service, but in all other services should be rapidly reduced.

NO. 4. FROM A TEACHER

1. I quite agree with your views in the main. I think you are extremely fair and open-minded. You sympathize with Indian political aspirations and desire to see India have as much self-government

NO. 4. FROM A TEACHER

1. I quite agree with your views in the main. I think you are extremely fair and open-minded. You sympathize with Indian political aspirations and desire to see India have as much self-government

as she is capable of. The details of a great political principle can only be worked out in the light of actual experience. In the meantime one can take advantage of the lessons of history and propose measures tentatively.

2. What you say about the imperial parliament for the imperial business of the whole commonwealth seems to me very well considered. There is no doubt that the present parliament is too busy with national (and provincial ?) affairs and has little time to deal properly with imperial problems. An imperial parliament, therefore, will be a most useful institution. But I must frankly confess that the position of India in it may be such as neither you nor Indians themselves may desire. As long as there is a conflict of colour there will be a conflict of interests. The Colonies on the one hand and India on the other may have contrary interests, and even though India has her own representatives in this parliament her voice obviously cannot be as strong as that of the Colonies put together. I am writing without the least reserve, and I don't hesitate to give expression to my fears. My fear is that there is a real danger of the white races exploiting India. So far as the attitude of the Colonies to India is known to us, we cannot call it altogether friendly. An imperial parliament cannot at once change this attitude, nor can it make all these interests one. Of course such a parliament may lead to a better understanding between the Colonies and India ; but who is to guard the interests of the weak ? Under the present system the British Parliament is regarded as impartial to all the Colonies and dependencies, and India can turn to them for the consideration of her rights and for the redress of any wrong.

3. It is very encouraging to find that the principle of self-government for India has been recognized by political writers like yourself. No sane man will, however, think that India must have self-government to the fullest extent at once. What educated Indians are claiming is that they should be trained in the art of self-government and that they should be given as much self-government as they deserve. Now the question is, how to train them and how to find out what measure of self-government they deserve. The solution of both the problems is one, namely, give them a small share of real self-government at once, and if they acquit themselves well, give them more. This will not only train them, but will also show what they are capable of. Your views are not different from this. But the details which you have proposed will, I am afraid, involve many practical difficulties.

4. The Provincial Legislative Councils exercising the ' transferred powers ' will find themselves in a very awkward position. They will be under a double responsibility ; they will be primarily responsible to their constituencies and secondarily and indirectly to the National Government and through it to parliament. These two latter will judge their work and will either transfer new powers or recall the transferred powers. I am not fully convinced that the double

as she is capable of. The details of a great political principle can only be worked out in the light of actual experience. In the meantime one can take advantage of the lessons of history and propose measures tentatively.

Government (British and Indian) which you have called a 'dyarchy' will suit Indian conditions. Of course a National Government (I mean the Government of India as constituted at present) and Provincial autonomous Governments may work side by side quite satisfactorily. But two Provincial Governments, the one with certain 'reserved' powers and the other with certain 'transferred powers' may find it difficult to adjust each to the other. It is only possible when there is unstinted sympathy on the part of the present rulers and full confidence on the part of the Indian people. If the rulers are not perfectly ready to see India get self-government as soon as possible, they will not, it is natural to suppose, afford as much help as the Indian Council with transferred powers may need. It will be difficult if the rulers take up a merely critical rather than a sympathetic and a friendly attitude. I am convinced that there are some individual Anglo-Indian rulers (it is difficult to say anything about their proportion) who are absolutely sympathetic and friendly. But that does not prove that the Provincial Governments will be equally so. It will be disastrous if the transferred Government and the Police are hostile. I specially mention the Police because there have been cases in which groundless suspicions not only put impediments in the way of really good pieces of work, but have made them nearly impossible, by means of espionage and petty prosecutions quite natural to Government but very objectionable all the same. I feel, therefore, that the most effective way of granting self-government is to make the present legislative councils stronger and to give the Indian members more executive powers and greater responsibilities. Instead of starting a new and distinct self-governing Council in each Province it is better to provide the present provincial Governments with a larger and more real element of Indian co-operation. For instance, you could have a larger number of Indian members on the executive councils. You could also grant tentatively more powers to the non-official members. If experience showed that they deserve them you could have more Indians in the executive councils and grant to the non-official members more powers. If on the other hand they failed such powers could be recalled. What I should like to see is a fair chance for them to show their ability in the art of government.

5. There is another difficulty which I want to mention. The members of civil service, Imperial and Provincial, and officials of other departments will remain, under the system you propose, servants of the Government of India and the Provincial Governments. The Provincial Indian Councils with transferred powers will perhaps have nothing to do with their appointment, promotion, and dismissal; and the council which will use them as instruments will have the same difficulty in managing affairs as a power finds with borrowed labour from his neighbour. I do not know how much loyalty these councils can expect from these officials. Of course, they may select their own heads of departments and the heads may

Government (British and Indian) which you have called a 'dyarchy' will suit Indian conditions. Of course a National Government (I mean the Government of India as constituted at present) and Provincial autonomous Governments may work side by side quite satisfactorily. But two Provincial Governments, the one with certain 'reserved' powers and the other with certain 'transferred powers' may find it difficult to adjust each to the other. It is only possible when there is unstinted sympathy on the part of the present rulers and full confidence on the part of the Indian people. If the rulers are not perfectly ready to see India get self-government as soon as possible, they will not, it is natural to suppose, afford as much help as the Indian Council with transferred powers may need. It will be difficult if the rulers take up a merely critical rather than a sympathetic and a friendly attitude. I am convinced that there are some individual Anglo-Indian rulers (it is difficult to say anything about their proportion) who are absolutely sympathetic and friendly. But that does not prove that the Provincial Governments will be equally so. It will be disastrous if the transferred Government and the Police are hostile. I specially mention the Police because there have been cases in which groundless suspicions not only put impediments in the way of really good pieces of work, but have made them nearly impossible, by means of espionage and petty prosecutions quite natural to Government but very objectionable all the same. I feel, therefore, that the most effective way of granting self-government is to make the present legislative councils stronger and to give the Indian members more executive powers and greater responsibilities. Instead of starting a new and distinct self-governing Council in each Province it is better to provide the present provincial Governments with a larger and more real element of Indian co-operation. For instance, you could have a larger number of Indian members on the executive councils. You could also grant tentatively more powers to the non-official members. If experience showed that they deserve them you could have more Indians in the executive councils and grant to the non-official members more powers. If on the other hand they failed such powers could be recalled. What I should like to see is a fair chance for them to show their ability in the art of government.

5. There is another difficulty which I want to mention. The members of civil service, Imperial and Provincial, and officials of other departments will remain, under the system you propose, servants of the Government of India and the Provincial Governments. The Provincial Indian Councils with transferred powers will perhaps have nothing to do with their appointment, promotion, and dismissal; and the council which will use them as instruments will have the same difficulty in managing affairs as a power finds with borrowed labour from his neighbour. I do not know how much loyalty these councils can expect from these officials. Of course, they may select their own heads of departments and the heads may

organize the departments, but after all they will come as borrowed servants and the Government of India and the Provincial Governments will remain their masters. The difficulty will be considerable if these officials are Europeans as it is natural to expect that they will be.

6. What you propose is not altogether new in India. The Indian Municipalities and the District and the Local Boards are to a certain extent self-governing institutions. But in most cases a Government official who is supposed to guide and help them unconsciously or consciously usurps all powers and local self-government becomes a misnomer. I am not competent to pass an opinion on the working of these self-governing Bodies; but I feel sure that a study of these institutions will throw considerable light on the scheme you propose.

7. I entirely agree with you that the principle of self-government should work from the bottom upwards and not from the top downwards. I strongly agree with you, therefore, in thinking that it is the provincial Governments which should be tackled first. These Provincial Governments as at present existing must be quite autonomous with regard to certain definite powers, and there should be an attempt to introduce a gradually increasing responsible Indian element. And here will be the beginning of Indian self-government.

8. I am now a convert to the principle of direct representation. We may have, as you propose, a list of qualified voters for each province. Care must, however, be taken to make the list as full as possible. Qualifications must definitely be laid down and there may be a special tribunal to judge the qualifications in doubtful or contested cases. But I should not leave it entirely to Government officials, nor to any section of the community.

No. 4 a

The following is a record of a discussion which took place on the above memorandum between three Englishmen and four Indians, including the author of the above memorandum. None of the persons taking part in this discussion were members of the public services.

X was pressed to put into concrete form his fears of what might happen if an Imperial Parliament such as is proposed by Mr. Curtis were constituted. It was supposed firstly that with British illogicality such a Parliament might be given control only over the external affairs of India as in the case of the self-governing units of the Empire, and that India's internal affairs might continue to be subject to a Parliament responsible to the electors of the United Kingdom. X stated that under such a system the only fear he would have for India would be that she might be over-taxed for purposes of Imperial Defence. On its being pointed out that assessment for such purposes could never under any system be made to depend on votes but would have to be fixed by some more or less automatic method such as that proposed in *The Problem of the Commonwealth*, X withdrew this point.

X was then asked to state in concrete form the dangers he feared

organize the departments, but after all they will come as borrowed servants and the Government of India and the Provincial Governments will remain their masters. The difficulty will be considerable if these officials are Europeans as it is natural to expect that they will be.

No. 4a

The following is a record of a discussion which took place on the above memorandum between three Englishmen and four Indians, including the author of the above memorandum. None of the persons taking part in this discussion were members of the public services.

X was pressed to put into concrete form his fears of what might happen if an Imperial Parliament such as is proposed by Mr. Curtis were constituted. It was supposed firstly that with British illogicality such a Parliament might be given control only over the external affairs of India as in the case of the self-governing units of the Empire, and that India's internal affairs might continue to be subject to a Parliament responsible to the electors of the United Kingdom. X stated that under such a system the only fear he would have for India would be that she might be over-taxed for purposes of Imperial Defence. On its being pointed out that assessment for such purposes could never under any system be made to depend on votes but would have to be fixed by some more or less automatic method such as that proposed in *The Problem of the Commonwealth*, X withdrew this point.

X was then asked to state in concrete form the dangers he feared

for India if her internal affairs also should be controlled by such a reconstructed Imperial Parliament. He mentioned two. (a) That the Colonial representatives would be less sympathetic towards Indian aspirations than a wholly British Parliament. The three Englishmen present and Z strongly disagreed. The other Indians present preserved an open mind on the point. (b) That in matters of trade and commerce there might be conflict of interests between the Colonies and India and that in consequence in matters of tariffs, &c., India might suffer. It was urged in reply that this would be much less likely to happen than at present because (1) the Colonies are so widely separated geographically that it would be very unlikely that all their interests would jump together, and in fact the united Indian vote might easily in matters of Indian tariffs and trade find itself in the position of the Nationalist party in the House of Commons, i.e. able to turn the vote in favour of either side. At present it is simply British interests and Indian: result, vide e.g. the cotton excise. (2) Britain is committed to Free Trade and has imposed Free Trade on India against her wish. The Colonies would sympathize with her desire for protection. The meeting generally adopted this view. It was admitted by all that the dangers mentioned by X would exist; and it was agreed that if any scheme such as that outlined in Mr. Curtis's letter were introduced, (1) it would be necessary that the scheme should be drawn up to its very smallest details by Parliament so as to leave as little room as possible for variation and obstruction by the Civil Service, and (2) it would be desirable that L.G.'s, as well as Governors, should be appointed from outside India. It was, however, generally agreed that no scheme of reform anywhere ever had been or would be without difficulties and dangers, and that this particular scheme did seem to be workable. Some of those present also felt that X was perhaps inclined to exaggerate the dangers. Y especially wished his opinion to be recorded, that among the first set of 'transferred' departments there should be at least one which would arouse popular enthusiasm and suggested Primary and Secondary Education. He also wished it to be recorded that in his view, concurrently with the introduction of this scheme, the official Government should also be gradually more and more leavened with Indians, especially in the Executive Councils, thus giving them opportunities for administrative training. Others felt that all the best men would be needed for the 'transferred' Governments. With regard to X's alternative suggestions it was pointed out:

(i) That taking more Indians into the Executive Councils would give training in administration but not in responsible government, for which quite a different kind of training,¹ viz. that of responsibly governing, is required.

(ii) That enlarging the number and powers of the non-official members of the Legislative Councils would be giving power without responsibility, which would be most undesirable.

¹ The difference is that between the training of individual ability and training of groups in the corporate political sense.

for India if her internal affairs also should be controlled by such a reconstructed Imperial Parliament. He mentioned two. (ii) That enlarging the number and powers of the non-official members of the Legislative Councils would be giving power without responsibility, which would be most undesirable.

¹ The difference is that between the training of individual ability and training of groups in the corporate political sense.

(iii) That this would also lead to representative Government, which would cause even worse difficulties with officialdom than even X feared under Mr. Curtis's proposals; and that sooner or later there would be an absolute deadlock.

X admitted that his scheme would be unworkable. It was generally agreed that Mr. Curtis's was the only scheme of advance towards responsible government put forward so far which seemed to be workable.

All present agreed in urging very strongly that Mr. Curtis should study the working of Municipalities in India.

No. 46

Separate Note by Y, one of the Indians above mentioned.

Self-government in the complete form will take a very long time to come. The question, therefore, is what can be done now and in the meanwhile towards the destined goal of self-government.

A charter such as suggested by Mr. Curtis may be promulgated. But more than this would be needed to meet the situation.

For the purpose of training individuals in the practical administration of the country more Indians must be introduced both in the Executive Councils and in the Indian Civil Service. What is wanted is closer association on terms of equality—and in this way making the government a national government.

Further, that steps should be taken to introduce the Indian into the ranks of the Officers of the Army holding the Royal Commission. High Military training should be afforded and also equal rank and status given.

In this way individual ability will be trained and developed throughout the country; and then as we grow ripe for responsible government, i. e. responsible to our own people in the full sense of the word, self-government will come and we shall be ready to undertake it.

To attain the latter Mr. Curtis's plan is excellent. It will probably come only in this way when it does come. But at present, as far as I can judge, the country will be slow to agree to it; and the scheme may fail on account of reasons suggested by X. My belief is that we must first attempt to make the government national by making the personnel of it largely national (Indian), and as we do this we must proceed to take steps to make it responsible to the people of India in the way suggested by Mr. Curtis—till we have attained full self-government.

The need of an Imperial Parliament for External affairs is clear. The development of a national (Indian) government and of self-government on internal affairs is a sacred duty. Connexion with the British Parliament may still go on during the interim, i. e. before full self-government comes.¹

¹ These last three papers are of interest as showing the manner in which the mixed groups which the writer at one time hoped to establish would have worked.

The first part of the paper is devoted to a review of the literature on the subject. The second part is devoted to a description of the experimental work. The third part is devoted to a discussion of the results. The fourth part is devoted to a conclusion.

EXPERIMENTAL

The experimental work was carried out in the following manner. The first part of the paper is devoted to a review of the literature on the subject. The second part is devoted to a description of the experimental work. The third part is devoted to a discussion of the results. The fourth part is devoted to a conclusion.

(iii) That this would also lead to representative Government, which would cause even worse difficulties with officialdom than even X feared under Mr. Curtis's proposals; and that sooner or later there would be an absolute deadlock.

X admitted that his scheme would be unworkable. It was generally agreed that Mr. Curtis's was the only scheme of advance towards responsible government put forward so far which seemed to be workable.

NO. 5. FROM A TEACHER

In submitting these 'notes' and criticisms on your scheme for the gradual introduction into India of some form of self-government, I will first give you a statement as to what qualifications I have for doing so.

I have lived now for three and twenty years in India, all of which have been passed in the United Provinces. I have of course wandered about a good deal, in Kashmir, Quetta, Mysore, and the Central Provinces, but what remarks I may make are mainly based on my knowledge of the people and conditions of Northern India.

As a non-official who can count among his Indian friends most of the so-called 'leaders' in these parts, and a very large number of men of all classes, official and non-official, I have been able to get, perhaps at least as well as most men, some idea as to the hopes and feelings of our Eastern dependency.

For years I have been convinced that great changes are necessary : that to ignore, or sneer at Indian claims is not only useless but mischievous : that refusal to grant reasonable concessions, until you are forced to give more than is either needed or asked for, is dangerous : that the treating of individual Indians, however well-born or educated, with contempt, or, at best, with half-amused tolerance and condescension, is not only showing a lack of breeding on the part of the Englishman, but is fraught with grave danger to the Empire.

I regard 'Indian unrest' as a huge artificial lake contained by an immense dam--the present system of government. The water is too heavy for the dam, and is forcing itself through chinks, ever increasing in number and dimensions, and threatening its entire structure. What would a good engineer do in such a case ? Would he not either divert some of the immense flood that was threatening to overwhelm him, into other and safer channels, or would he not entirely reconstruct the dam ? Probably both.

But what does government do--collectively and individually ? Does it not run about bestowing little meaningless concessions here, feeble flattery there, lamentable weakness at one moment, misguided severity at another, for all the world like a lot of indifferent masons putting in bits of stone and mortar in the vain hope of stopping the leaks ? For a time such a policy succeeds, and will continue to succeed, and the engineer lives in a fool's paradise ; but, one day, the ever-widening breaches refuse to be stuffed up with rubble, the whole structure gives way, and engineer and staff are carried away in the universal ruin.

The Civil Service is a magnificent institution. It is probably the most efficient, and the most uncorrupt, that the world has ever seen. But it has the faults of its virtues. It is so good that it regards itself as infallible : it is so anxious to rule well and justly that it

CHAPTER 1. INTRODUCTION TO THE THEORY OF GROUPS

1.1. DEFINITION. A group is a set G equipped with a binary operation \cdot satisfying the following axioms:

- (G1) G is closed under \cdot , i.e. $a \cdot b \in G$ for all $a, b \in G$.
- (G2) \cdot is associative, i.e. $(a \cdot b) \cdot c = a \cdot (b \cdot c)$ for all $a, b, c \in G$.
- (G3) There exists an identity element $e \in G$ such that $e \cdot a = a \cdot e = a$ for all $a \in G$.
- (G4) For every $a \in G$, there exists an inverse element $a^{-1} \in G$ such that $a \cdot a^{-1} = a^{-1} \cdot a = e$.

1.2. DEFINITION. A subgroup H of a group G is a subset of G which is itself a group under the same operation \cdot . In other words, H must satisfy the same four axioms (G1)-(G4) as G .

1.3. DEFINITION. The order of a group G is the number of elements in G , denoted by $|G|$. If G is finite, then $|G|$ is a positive integer. If G is infinite, then $|G|$ is said to be infinite.

1.4. DEFINITION. A cyclic group is a group that can be generated by a single element. That is, there exists an element $a \in G$ such that every element of G can be written as a^k for some integer k .

1.5. DEFINITION. A normal subgroup N of a group G is a subgroup such that $g \cdot n \cdot g^{-1} \in N$ for all $g \in G$ and $n \in N$. This condition is equivalent to saying that $gN = Ng$ for all $g \in G$.

No. 5. FROM A TEACHER

In submitting these 'notes' and criticisms on your scheme for the gradual introduction into India of some form of self-government, I will first give you a statement as to what qualifications I have for doing so.

I have lived now for three and twenty years in India, all of which have been passed in the United Provinces. I have of course wandered about a good deal, in Kashmir, Quetta, Mysore, and the Central Provinces, but what remarks I may make are mainly based on my knowledge of the people and conditions of Northern India.

As a non-official who can count among his Indian friends most of the so-called 'leaders' in these parts, and a very large number of men of all classes, official and non-official, I have been able to get, perhaps at least as well as most men, some idea as to the hopes and feelings of our Eastern dependency.

For years I have been convinced that great changes are necessary : that to ignore, or sneer at Indian claims is not only useless but mischievous : that refusal to grant reasonable concessions, until you are forced to give more than is either needed or asked for, is dangerous : that the treating of individual Indians, however well-born or educated, with contempt, or, at best, with half-amused tolerance and condescension, is not only showing a lack of breeding on the part of the Englishman, but is fraught with grave danger to the Empire.

I regard 'Indian unrest' as a huge artificial lake contained by an immense dam—the present system of government. The water is too heavy for the dam, and is forcing itself through chinks, ever increasing in number and dimensions, and threatening its entire structure. What would a good engineer do in such a case ? Would he not either divert some of the immense flood that was threatening to overwhelm him, into other and safer channels, or would he not entirely reconstruct the dam ? Probably both.

But what does government do—collectively and individually ? Does it not run about bestowing little meaningless concessions here, feeble flattery there, lamentable weakness at one moment, misguided severity at another, for all the world like a lot of indifferent masons putting in bits of stone and mortar in the vain hope of stopping the leaks ? For a time such a policy succeeds, and will continue to succeed, and the engineer lives in a fool's paradise ; but, one day, the ever-widening breaches refuse to be stuffed up with rubble, the whole structure gives way, and engineer and staff are carried away in the universal ruin.

The Civil Service is a magnificent institution. It is probably the most efficient, and the most uncorrupt, that the world has ever seen. But it has the faults of its virtues. It is so good that it regards itself as infallible : it is so anxious to rule well and justly that it

imagines that every one else wants *to be ruled* well and justly, forgetting that most nations, on reaching a certain stage, would prefer their *own* rule, even if, for the moment, it involved a certain amount of retrogression.

The Civil Service, as it exists at present in India, in an anachronism. A civil service must of course exist in one form or another in every country. Whether our present system can, or ought, to be entirely scrapped in the very near future I doubt. The District Magistrate, as I have pointed out in a note, I regard as essential under existing conditions, but there are many other posts which could be done away with without many tears being shed.

The main outline of your scheme seems a sound one on which to work out details. As for your insistence on the great changes that will have to come there is no room for argument. Whether we like it or not, the Indian is going to have a bigger say. Shall we give him quickly those dishes that he can digest fairly easily, or shall we push him away from the table until, driven by the hunger of despair, he indulges in a surfeit of every course with disastrous consequences?

You will see that I have put on a plea for Education being handed over. As an educationist, I should not do so were I not, personally at any rate, unafraid.

NOTES

Para. 2. I quite agree that the present system does not ensure anything like adequate consideration of Indian affairs by the People of England through their Parliament.

This is very strongly felt by many Indians with whom I have discussed the matter. Failing an Imperial Council, on which India in common with the Colonies and Dominions should receive *adequate* representation, I think a return to something like the Parliamentary Committee is essential.

I strongly lean towards an Imperial Council because :

(i) India would feel she was on an *equality* with the other component parts of the Empire. Sentiment bulks more largely perhaps in India than anywhere.

(ii) Indians would meet Colonials face to face ; each side could put its own views directly before the Empire ; a sense of responsibility would be engendered with wider knowledge of the difficulties of others ; and the fact that Indian questions had received a fair hearing would mitigate resentment should decisions, not perhaps altogether acceptable to this country, be arrived at.

N.B.—Indian representation must be *genuine*. The recent trio that went to England was probably about the best that, under existing circumstances, could have been selected, and yet not one of them was *really* acceptable.

(a) Sir James Meeson is personally popular and trusted, but he represented the Bureaucracy, and, however well he might have so done, the Public feel that he *must* have been hampered by his official

position, and that, in any case, he could not view things from quite the same angle of vision as India herself.

(b) Sir S. Sinha was, it is true, a former President of the National Congress, but his Presidential Address gave much dissatisfaction. He had formerly, moreover, been a member of that very Bureaucratic Government, which Indian leaders are desirous of eliminating, or, at any rate, of profoundly modifying, and it is believed that he was selected as one, who, though technically a representative of the advanced school, was really little better than a Government servant.

(c) The Maharaja of Bikaner is regarded as representing the semi-independent chiefs and nothing else. The average Indian has no objection to a ruling prince being appointed, *provided* he is an extra member for the purpose of representing Native States as such. Probably they would prefer him to a European, official or otherwise; but it is thought that, by including him, a more direct representation of British India was excluded.

As already said it is probable that, under the circumstances, it would have been difficult to have made a better selection; but, for the reasons already given, no Indian with whom I have discussed the matter is altogether satisfied.

Para. 8. You have here hit one very prominent nail right on the head, and have explained the cause of a grave apparent injustice—a cause I have never before seen so clearly shown.

By an unfortunate delight in well-sounding phrases, coupled by an utter inability to see their logical application, the compilers of the Proclamation of 1858¹ have landed the Empire in a grave difficulty.

This declaration by Queen Victoria has been referred to as India's 'Magna Carta'. The spirit of freedom and equality which it breathes is one to which no objection can be taken in the abstract, but, unfortunately, in this prosaic world we deal with facts. Now one of the facts that was not clearly realized sixty years ago was that the so-called colour difficulty would arise in the colonies. At present India cannot realize that at the bottom this is an economic question. All she sees is that her sons, whether illiterate 'coolies' or educated gentlemen, are treated in certain parts of the empire as if they were no better than the African Savage. She would like to retaliate and cannot, and this is a bitter pill. It is this that has enabled men like Ghandhi, Andrews, and Pearson to get the support they have. I am far from suggesting that these people have not done good work, and brought many abuses to light; but I am fairly certain that, but for the goad of implied inferiority, the average Indian leader would not have worked at 'the cause'.

Hitherto, with her vast population and, in general, hot climate, India has been regarded as safe from immigration; but the very rapid increase of the Chinese in such towns as Calcutta and Rangoon, and the commercial penetration of Japan, which is being stimulated by

the war, are likely to cause this country much searching of heart before long. It will then be seen whether our Indian leaders will be prepared to submit to the logic of their present arguments.

At the moment, however, the public are blind to the danger that threatens them from the Far East, and are swayed by outraged sentiment.

It has always been a puzzle to me why Lord Hardinge, who, with all his faults, often showed strength in upholding Indian interests, did not act more drastically; but, since reading your letter, I have formed a somewhat clearer idea of his difficulty.

It is this offence to Indian sentiment that makes the Press gird against the employment of Colonials in our Civil Service.

I know more than one Colonial Official and, from private conversation with the people, I should say that they were far from being personally unpopular. One who was formerly a collector was certainly regarded as a 'strong' man, and at the same time courteous as to the higher classes and sympathetic to the lower. Nevertheless it is a fact that, when such men have to initiate, or carry out, some measure which is not altogether popular, much more is made of the grievance than would have been the case had the official been a native of the country, or even an Englishman. The opportunity is seized upon to point out such acts as evidence, if not of the Colonial Spirit, at any rate of the undesirability of Indians being compelled to accept orders from men of those parts of the Empire, which refuse to treat persons of Oriental nationality on the same plane as themselves.

Para. 11. You are right. Educated and semi-educated Indians are obsessed, naturally, by the English system of Government. As you clearly point out, it is very doubtful whether, even in England, that system can continue without considerable modification (e.g. Ireland).

The American and Colonial, even the German, systems are rather those from which we should take our lessons in constructing self-government for India. And in India, even more than in other countries, for she is not, and *never* will be, a nation, any more than Europe is a nation. Just as at present, under a common danger, various European states are allied together, and will separate again once the need for concerted action is over, so here. At the moment the educated men in the various parts of this Great Peninsula hang together and act as one, but, once their objects are attained it will be impossible for the Pathan of the West to work permanently with the Bengali of the East, or the Andhra of the South with the Sikh or Hindu of the North, save under the cementing sway of some outside world-power.

This point, though dimly realized by the Indians themselves, is put aside and obscured at present in their blind idealistic zeal.

I think your point wants to be most clearly brought home, but, in doing so, care must be taken that it is not regarded as a subtle application of 'divide et impera'.

Para. 14. Dyarchy, as you correctly state, is little understood out

the war, are likely to cause this country much searching of heart before long. It will then be seen whether our Indian leaders will be prepared to submit to the logic of their present arguments.

At the moment, however, the public are blind to the danger that threatens them from the Far East, and are swayed by outraged sentiment.

This point, though dimly realized by the Indians themselves, is put aside and obscured at present in their blind idealistic zeal.

I think your point wants to be most clearly brought home, but, in doing so, care must be taken that it is not regarded as a subtle application of 'divide et impera'.

Para. 14. Dyarchy, as you correctly state, is little understood out

here, not merely by the people, but also by the bureaucracy, and least of all by the military.

Dyarchy, however, so far as I can understand, is actually working in our self-governing colonies—especially Canada—and in the United States. How far it really works in Germany I do not know, but I fancy it is to a great extent modified by what, for want of a better word, I will call ‘Prussianism’. At any rate it seems to me that herein lies the solution for India.

The difficulty that lies before you in advocating ‘dyarchy’ is that, no matter how you may gild the pill, if your scheme is to work, the I.C.S., *as at present constituted*, must eventually go. Dyarchy and an autocratic Bureaucracy cannot exist together. Vested interests are great, and the I.C.S. will fight hard.

Might not a partial solution to the difficulty be found in the institution of an Imperial Civil Service, the members of which might, should need arise, be drafted from one portion of the Empire to another. A person serving, say in India, would then feel that, should political or other changes, necessitate a termination of his appointment, he would not be stranded, but would be found equal employment and opportunity for further promotion elsewhere. I do not dilate on this, I merely put it forward as a suggestion for further development.

Paras. 15, 16, and 17. These paragraphs follow as a natural consequence of Dyarchy, but you must lay especial stress on 16.

For a considerable time the Supreme Government must, it seems to me, remain largely bureaucratic; both in personnel and traditions, though I am not quite clear if you agree with me. Unless, therefore, careful provision is made to guard against it, there will be great temptation to interfere with, and to exercise supervision over, Provincial Governments. The functions and powers of the higher party must therefore be very clearly defined. This is all the more necessary as there is bound to be some loss of efficiency—apparent, at any rate—at first, and the temptation for a clever and energetic bureaucrat to try to put things right will be irresistible.

Paras. 18 and 19. These virtually imply the ultimate disappearance of the I.C.S., as it is at present, and will therefore be vigorously opposed by those who can see no further than their own supposed interests and ‘loss of prestige’.

You doubtless realize that your scheme, with the general features of which I am in complete sympathy, must result in the ultimate disappearance of the District Officer. The importance of this official is sometimes overlooked by those who have not lived permanently in India.

Judicial officers, even Judges of the High Court, possess little popular prestige compared with that of the District Officer. He, the District Officer, is the impersonation of all earthly power to the peasant; he is their *ma-bap*, the one to whom all look for help and guidance; and, in fact, the local ‘God’.

Should the Judge desire the loan of a carriage or an elephant, he

must trust to his personal popularity or to some member of his 'Bar' to accommodate him. In the case of the District Officer there is no need to ask, he has everything thrust upon him.

I remember the case of a certain officer some years ago, who, on arriving at the new station to which he had been posted, discovered an elephant and some two or three carriages and pairs of horses in his compound. As, after a few days, they were still there, he made inquiries, and was informed that they had been placed permanently at his disposal by certain of the leading gentry. He thereupon wrote to the owners, politely thanking them for their kindness, but pointing out that his official salary was such as to render it unnecessary for him to have to depend on others for conveyances. After a little demand the carriages disappeared, but the owner of the elephant, a local raja, was most perturbed and came in person to call on the new official. He explained that it had always been the custom for his family to be privileged to lend his District Officer an elephant, and that, if it were refused, his neighbours and tenants would regard it as a sign that he was under official displeasure. The officer in question was not a very keen sportsman, and rarely required an elephant, but, so long as he was stationed there, the elephant lived in his compound. This was some years ago, and may be a more or less isolated case, but it is a good example of the importance with which the Collector, or Deputy Commissioner, as the District Officer is usually called, is regarded. Of course in the larger towns, where modern ideas are beginning to permeate, the official is not so greatly regarded as in the less advanced districts, but, even there, the prestige he enjoys is far greater than that given to a corresponding person in any other civilized country.

I fully agree that any system of Government which does not give a minister complete control over his own officers and his own department, is unworkable, and that the present arrangement, by which a man might be responsible for Education in his District to one Minister, and for Police, let us say, to another, would be hopeless.

This means, as I have said before, that the I.C.S., as at present constituted, will eventually have to go, with all its power, prestige, privileges, and ideals, and in its place would be put police, education, Public Works, and other officials, each responsible for a limited range of duties, and each under his departmental head, who, in his turn, would be under a non-official member.

Such men, under conditions existing in India, where the lower classes are pathetically ignorant and rely entirely on a paternal government, would have little or no influence at all, except such as they might derive from their particular office, or, in a few cases, from their own personality.

Now I am immensely taken with your scheme in the main, but every scheme which means an entire reversal of existing conditions, must have awkward difficulties to overcome. It is no good ignoring them,

must trust to his personal popularity or to some member of his 'Bar' to accommodate him. In the case of the District Officer there is no need to ask, he has everything thrust upon him.

Such men, under conditions existing in India, where the lower classes are pathetically ignorant and rely entirely on a paternal government, would have little or no influence at all, except such as they might derive from their particular office, or, in a few cases, from their own personality.

Now I am immensely taken with your scheme in the main, but every scheme which means an entire reversal of existing conditions, must have awkward difficulties to overcome. It is no good ignoring them,

and equally, if you are convinced of the merits of your ideas, it is worse than foolish to let them daunt you.

One of the great difficulties lies in the question of the District Officer, and I fancy that your critics will seize upon it. Hence the position has to be carefully considered.

The Office of Commissioner, and many another, could, I think, very soon be eliminated under a modification of Indian Government without any great difficulty or inconvenience. The District Officer is in a different category. To the educated men—and they are mainly confined to the large towns at present—the District Officer may be an anachronism, but to the ignorant country folk he is still the embodiment of power and, I am glad to say, justice. The peasant still trusts him, still relies on his judgement, accepts his advice, and appeals to him in time of trouble. I do not wish to appear to deery the power of the better class Indian for sympathizing with his brothers lower in the social scale, but, in spite of what the ‘leaders’ may say, I maintain that it is just because he is a foreigner, because he is not affected by questions of caste, ancient prejudices, or local influences, that the English District Officer is more really in touch with the *ryot* than the product of our Indian cities.

I believe this point has not altogether escaped your notice, and that you are endeavouring to formulate a plan by which the various functions of the District Officer should be gradually taken over.

In the illiterate condition of India, a condition that cannot be greatly modified for a long time so far as I can see, it will have to be a very gradual and a very careful process by which the transfer of functions is effected.

I must confess at present I cannot see clearly any agency which could in any way adequately take over the peculiar duties of the officer under discussion.

Perhaps, in time, some of the functions might be assumed by the District and Municipal Boards. These bodies have recently been given a somewhat larger share of control over their own affairs, and it may be that the solution lies along this line. I have not sufficient knowledge of the working of these corporations, so cannot criticize my remark, which I leave to you to investigate to see whether there is anything in it.

I lay emphasis on the District Officer, as the satisfactory solution of this problem will, it seems to me, do more than anything else towards paving the way for the proper working of your main idea, viz. the carrying on of the government of this country through separate departments under non-official ministers.

Para. 24. The elimination of the ‘official vote’ in Legislative Councils is essential.

At present officers have to vote ‘to order’, which is an obvious waste of time which might be better employed in their official business. For such men to have to come often long distances, involving heavy travelling allowances and neglect of their especial duties, seems

and equally, if you are convinced of the merits of your ideas, it is worse than foolish to let them daunt you.

I lay emphasis on the District Officer, as the satisfactory solution of this problem will, it seems to me, do more than anything else towards paving the way for the proper working of your main idea, viz. the carrying on of the government of this country through separate departments under non-official ministers.

Para. 24. The elimination of the ‘official vote’ in Legislative Councils is essential.

At present officers have to vote ‘to order’, which is an obvious waste of time which might be better employed in their official business. For such men to have to come often long distances, involving heavy travelling allowances and neglect of their especial duties, seems

to the mere layman utterly inexplicable. Surely the power of the government would have been far better preserved by the clear right to 'veto' anything that they regarded as impracticable or dangerous.

The present system is objected to by almost every one, official or unofficial, European or Indian, with whom I have discussed the point. It has resulted in no healthy debate, and has merely intensified 'racial cleavage'. So bad is it that, if an Indian occasionally votes *on the side of* the Government, he is denounced as a sycophant or traitor, quite irrespective of the merits of the case; if, on the other hand, a non-official European (officials, of course, cannot) votes *contrary to* Government his action is welcomed, either as a smack at authority or as a proof that the said authority is acting so badly that even men of its own race cannot support it.

In this connexion it must be further remembered that even the semi-educated are woefully ignorant and easily gullible, and that incidents such as I have mentioned may, and do, have effects on India out of all proportion to their merits.

Para. 25. Your object is good. Candidly I have not much hope for 'party' government in India at present, certainly not as we understand it in England. In fact, am I not fairly correct in saying that real 'party' government is an exotic outside the British race? Speaking for the United Provinces, I fear it would lead to Hindu and Mohammedan parties, and it is possible that the discontented would say that we had arranged this scheme on purpose to keep up religious differences. Another difficulty that you must not ignore is that Indians cannot fight on the platform and remain personal friends. The idea of Balfour and Asquith, after a keen debate, sitting down to supper together is altogether foreign to their ideas.

On one occasion I had a passage at arms in a public body with a high official. Some of my Indian friends hinted very strongly that I had done myself no good, and possibly the institution I represented, by thus attacking a representative of the Government. When I explained to them that, immediately after the debate, he and I met at the club, and had drinks and a game of billiards together, they frankly could not understand it. I pointed out that official differences had nothing to do with social relations; but it was no good. 'We cannot keep the two apart' was the comment.

It is possible in some provinces, where the Hindu Mohammedan question is not so acute, that things might be easier, but I fancy that the party scheme at the beginning would lead to considerable friction. I point this out, however, merely to show a difficulty to be guarded against. Difficulties are to be overcome, and, if the scheme is fundamentally sound, one should not reject it on possible awkwardnesses, which might, or might not, materialize. People must *learn by experience*.

Paras. 29, 30, 31. These three paragraphs refer to the principles of elections and electors.

I do not know sufficient of the details of the present system to say

to the mere layman utterly inexplicable. Surely the power of the government would have been far better preserved by the clear right to 'veto' anything that they regarded as impracticable or dangerous.

The present system is objected to by almost every one, official or unofficial, European or Indian, with whom I have discussed the point. People must *learn by experience*.

Paras. 29, 30, 31. These three paragraphs refer to the principles of elections and electors.

I do not know sufficient of the details of the present system to say

very much in the way of criticism, but I would like to draw your attention to a few points which have struck me.

The arrangement for the separate representation for Mohammedans, though theoretically unsound (unless it is carried to its logical conclusion, and bestowed on all other communities, Hindu, Parsi, Jain, Buddhist, Christian, &c.), is no doubt absolutely necessary in India.

Unfortunately the present system causes much heart-burning.

(a) When Mohammedans are in a minority, means are found for their representation. The converse does not hold good in the case of the Hindus. If they are in a minority they must grin and bear it.

(b) Mohammedans get a double vote: they can vote in the special Mohammedan electorate and again in the mixed electorate. The Hindu can vote *only* in the mixed electorate.

(c) The conditions necessary to obtain the franchise are easier, I believe, in the case of the Mohammedans than in that of the Hindus.

I object to separate electorates, but agree that at present they must exist. I would, however, have

- (i) No right of voting in a mixed electorate, if the person had the right of voting in a special electorate.

This would do away with —

(a) The double vote.

(b) The chance that the special electorate would not only get their own man in, but possibly sway also the mixed electorate in their communal favour.

- (ii) Franchise qualification the same for all.

- (iii) Different electorates for District and Municipal Boards on a somewhat wider basis than those for electing to the Provincial Councils.

I will not trouble you with any discussion on the Municipal electorates, but will deal with that for the councils.

I would not have councillors elected, as they are at present, by Municipalities and District Boards: some of these have the right only in *rotation*! and for a period of three years at a time!!! Nor would I allow, in any case, a councillor to be elected by the limited electorate of his own fellow-members of Boards. This present scheme is leading constantly to friction, local jealousy, and intrigue. Men strive to be elected to municipalities with a view to council and the title 'Honourable' rather than to improve local conditions.

I should like to see a system by which one or more members were assigned to each District, or Division, according to the size of the council, and representation should also be given to each town over a certain size. The details are not pertinent to the matter just now. The electorate should be selected on one or more of three bases—age, property, education.

- (i) *Age*.—Whatever age might ultimately be decided on, I would strongly urge that it should not be less than 25. In my opinion 21 is too young. The English analogy is not a good one. Few of our young men in England are to be found at Oxford or Cambridge after

very much in the way of criticism, but I would like to draw your attention to a few points which have struck me.

The arrangement for the separate representation for Mohammedans, though theoretically unsound (unless it is carried to its logical conclusion, and bestowed on all other communities, Hindu, Parsi, Jain, Buddhist, Christian, &c.), is no doubt absolutely necessary in India.

Unfortunately the present system causes much heart-burning.

(a) When Mohammedans are in a minority, means are found for their representation. The converse does not hold good in the case of the Hindus. If they are in a minority they must grin and bear it.

(b) Mohammedans get a double vote: they can vote in the special Mohammedan electorate and again in the mixed electorate. The Hindu can vote *only* in the mixed electorate.

(c) The conditions necessary to obtain the franchise are easier, I believe, in the case of the Mohammedans than in that of the Hindus.

I object to separate electorates, but agree that at present they must exist. I would, however, have

(i) No right of voting in a mixed electorate, if the person had the right of voting in a special electorate.

This would do away with —

(a) The double vote.

(b) The chance that the special electorate would not only get their own man in, but possibly sway also the mixed electorate in their communal favour.

(ii) Franchise qualification the same for all.

(iii) Different electorates for District and Municipal Boards on a somewhat wider basis than those for electing to the Provincial Councils.

I will not trouble you with any discussion on the Municipal electorates, but will deal with that for the councils.

I would not have councillors elected, as they are at present, by Municipalities and District Boards: some of these have the right only in *rotation*! and for a period of three years at a time!!! I should like to see a system by which one or more members were assigned to each District, or Division, according to the size of the council, and representation should also be given to each town over a certain size. The details are not pertinent to the matter just now. The electorate should be selected on one or more of three bases—age, property, education.

(i) *Age*.—Whatever age might ultimately be decided on, I would strongly urge that it should not be less than 25. In my opinion 21 is too young. The English analogy is not a good one. Few of our young men in England are to be found at Oxford or Cambridge after

22, and none are allowed to remain at school after 20 (in many schools after 18). In India not a few schoolboys are 23—even 25—and in the colleges I should say that a fair proportion are between 23 and 30.

No one who knows India or Indian colleges need be told what a disturbing effect an election would have on students and colleges did a large number of them happen to be electors. Candidates and their supporters would come round canvassing, the college halls would be demanded for meetings, and the whole place would be a scene of intrigue, intimidation, and corruption.

You may think I am exaggerating. I can assure you I do not think so. You may say, What about the authority of the Principal and Staff? I regret to say that the public, far from supporting them in any disciplinary measures or restrictions they might deem necessary, would be attacked as enemies of liberty and political freedom, and they would have to bow before circumstances.

Again, at present, I feel that an Indian has not the same balance and level-headedness as an English youth of the same age. He is much more impressionable, and much more easily carried away by political agitators.

Both on the score of discipline, then, and of later development of the faculty for calm criticism, I feel very strongly that the voting age should not be less than 25.

After all, in England it is proposed to give women the vote at a later age than men.

(ii) *Property*.—There would of course be a property vote, but there is no need to discuss details, except that it should be the same for all, so far as is possible.

(iii) *Education*.—Here again I leave the discussion as to what should give the educational vote, but, in spite of objections, I think it should be the same for all sections of the public.

I feel that the differentiation which has been made between the voting qualifications for Hindus and Mohammedans, has been the cause of much embittered feeling, and I cannot see the need for such. At any rate, if the mixed electorate is done away with, this need, which may now exist, would disappear.

The above electorate would also of course vote for local bodies, when conditions would be modified to allow a broader franchise.

You will of course observe that, with the exception of the age limit, I do no more than indicate vaguely what I think would form the basis for a scheme.

Para 33. I have carefully studied your four lists of functions, and can find nothing to alter, except that I would put education in the first group, and will give my reasons.

(a) With the exception of Agriculture, none of the functions of the first group appeal much to the public. Many of them, however important they may be, bulk small in the public eye, and so do not appeal to the political 'leader' as a subject for enthusiastic work.

The first of these is the fact that the system is not self-sufficient. It is dependent on the external world for its raw materials and for its energy. This is a serious disadvantage, especially in the case of a small, isolated community.

The second disadvantage is that the system is not very flexible. It is not able to adapt to changes in the external world. This is a serious disadvantage, especially in the case of a small, isolated community.

The third disadvantage is that the system is not very efficient. It is not able to make the most of its resources. This is a serious disadvantage, especially in the case of a small, isolated community.

The fourth disadvantage is that the system is not very secure. It is not able to protect itself from external threats. This is a serious disadvantage, especially in the case of a small, isolated community.

The fifth disadvantage is that the system is not very healthy. It is not able to maintain its own health. This is a serious disadvantage, especially in the case of a small, isolated community.

The sixth disadvantage is that the system is not very happy. It is not able to provide for the happiness of its members. This is a serious disadvantage, especially in the case of a small, isolated community.

The seventh disadvantage is that the system is not very free. It is not able to provide for the freedom of its members. This is a serious disadvantage, especially in the case of a small, isolated community.

The eighth disadvantage is that the system is not very equal. It is not able to provide for the equality of its members. This is a serious disadvantage, especially in the case of a small, isolated community.

The ninth disadvantage is that the system is not very just. It is not able to provide for the justice of its members. This is a serious disadvantage, especially in the case of a small, isolated community.

The tenth disadvantage is that the system is not very wise. It is not able to provide for the wisdom of its members. This is a serious disadvantage, especially in the case of a small, isolated community.

The eleventh disadvantage is that the system is not very brave. It is not able to provide for the bravery of its members. This is a serious disadvantage, especially in the case of a small, isolated community.

22, and none are allowed to remain at school after 20 (in many schools after 18). In India not a few schoolboys are 23—even 25—and in the colleges I should say that a fair proportion are between 23 and 30.

(a) With the exception of Agriculture, none of the functions of the first group appeal much to the public. Many of them, however important they may be, bulk small in the public eye, and so do not appeal to the political 'leader' as a subject for enthusiastic work.

Now I think you will agree that sentiment plays a considerable part in politics, and it is advisable, so far as possible, to hand over some fairly big and important Department to popular control as soon as it can be done.

Of all those you have placed in groups ii, iii, and iv education is not only one which the people are very desirous of controlling, but is probably the one most suited for the purpose in view.

(b) Education, as now carried on, is too entirely on English models, and run too much by Englishmen out of sympathy with Eastern ideas.

(c) There are a large number of well-educated and capable Indians, and, if more do not enter the Educational Service, it is because the general status and treatment accorded to the Indian do not make it attractive.

(d) Already several good colleges are run entirely by Indians. The Fergusson College, Bombay, is ruled by the Hon. Mr. Paranjpye, Senior Wrangler and late Fellow of St. John's College, Cambridge. The D.A.V. College, Lahore, is a very large and successful institution under the control of the Arya Samajists. The Central Hindu College, the nucleus of the Hindu University, is practically entirely Indian. The M.A.V. College, Aligarh, has, it is true, a large European staff, but the government of the college is entirely Mohammedan. In Calcutta there are many large and flourishing colleges, managed and staffed by Indians, while a large proportion of the colleges in native states are similarly controlled.

Of course the general and somewhat reiterated cry is that these institutions are inefficient. The justice of this remark can only be proved when the authors of it define efficiency.

In some respects, of course, they differ in their methods and management from those under the control of Englishmen. As, however, these places are usually not only equally successful in examinations with those under Government, are often quite good at athletics, and in buildings and equipment not markedly inferior, but are more economically run, with lower fees and a less highly-paid staff, it is difficult to see what is honestly to be said against them.

(e) The chief weakness in our education is due, I believe, more to the Government policy of demanding University certificates as passports to Government service than to any desire on the part of the public for shoddy teaching.

(f) No one can say that under Government control our education is at all satisfactory. By handing it over to the public we should not be risking one of our best departments.

(g) Speaking for myself, and I fancy for many other non-official educationists, I should not fear the control being transferred. Of course the position and interests of those actually employed at the time of transfer should be fully safe-guarded.

(h) It has been sometimes said that the public could be entrusted with Primary, but not with a Higher Education. I think it would be

(g) Speaking for myself, and I fancy for many other non-official educationists, I should not fear the control being transferred. Of course the position and interests of those actually employed at the time of transfer should be fully safe-guarded.

(h) It has been sometimes said that the public could be entrusted with Primary, but not with a Higher Education. I think it would be

impossible to have divided control of this nature. It is easy enough to say that village schools are Primary and Presidency Colleges Higher Educational institutions, but in between the various grades merge imperceptibly into one another. This control, if divided, would lead to invidious comparisons, and friction in its many manifestations.

(2) I think the difficulties of education and educational policy are not fully realized by the Public. If once the critics had to meet their own criticisms, carry out their own ideas, and, incidentally, themselves impose the necessary taxes, they would have an excellent lesson in practical politics, which, once learnt, would pave the way for trying their hands at managing other functions.

(j) Finally I would like once more to emphasize my belief that the cry of inefficiency raised against all Indian educational institutions and ideals is overdone, and, so long as Government schemes and arrangements are so lamentably below what they ought to be, it hardly becomes us to assume the virtuous air we are prone to do. I think Sir Narayan Chandavakar, presiding at the Bombay Educational Conference on June 30, put the Indian point of view very clearly.

I quote from the *Pioneer* of July 7, 1917. In referring to the assertion that India needs efficient, not inefficient, education he said :

‘There is none, so far as I know, among the educated classes in India who is so thoughtless as to think otherwise. We all want teaching Universities: we all desire that a teaching University should stand for real scholarship. But what we fear is that, in the name of ‘efficiency’ of University education the interests of its diffusion are liable to be sacrificed in India, with the result shown by experience that, in the struggle between efficiency and diffusion, India is in danger of securing neither the one nor the other.’

Para. 35. If education were handed over, I think it would be necessary to have a fifth minister. I do not see which of the four you have named could undertake the work in addition to the duties already assigned him. At the present moment we suffer in the United Provinces from education being in the hands of the Judicial Secretary.

Para. 37. The necessity for insisting that ministers select their subordinates from Government servants is clear. Such a rule is needed in every country, but especially so in India, where the old tradition still holds good that power gives a rightful opportunity to reward friends and relations.

Para. 44. It is proposed that the experiment be made in each case for five years. I venture to think this period a little short. It is difficult to get much done, even under existing conditions, in five years, and often leads heads of Provinces to hurry through schemes which demand time for full development.

It may be said that it would be risky to grant a longer period, but, on the other hand, unless the new men felt that they were going to

Para. 35. If education were handed over, I think it would be necessary to have a fifth minister. I do not see which of the four you have named could undertake the work in addition to the duties already assigned him. At the present moment we suffer in the United Provinces from education being in the hands of the Judicial Secretary.

Para. 37. The necessity for insisting that ministers select their subordinates from Government servants is clear. Such a rule is needed in every country, but especially so in India, where the old tradition still holds good that power gives a rightful opportunity to reward friends and relations.

Para. 44. It is proposed that the experiment be made in each case for five years. I venture to think this period a little short. It is difficult to get much done, even under existing conditions, in five years, and often leads heads of Provinces to hurry through schemes which demand time for full development.

It may be said that it would be risky to grant a longer period, but, on the other hand, unless the new men felt that they were going to

have a fair chance of 'making good', might not the limited period of time cause them either to make a splash with ill-considered schemes or else to fear undertaking new projects the ultimate results of which might not be realized by themselves?

If ten years is too long, perhaps seven years would be a fair compromise.

Para. 48. This is a very serious objection. There is *no doubt whatever* that Indians have a great reluctance to imposing taxation. In addition to a natural aversion from unpopularity there is strongly imbedded in the Indian mind the idea that the Supreme Government is the *ma-bap*, a *deus ex machina*, which can always be relied upon to pull up buckets of silver from a mysterious well. If Local Governments are permitted to badger the Supreme Government for extra allowances and grants, beyond what they are bound by statute to supply, there will always be the risk that the Province will try to shift the odium of raising money, or imposing taxation, from their own shoulders on to those of the higher body.

I would go further than your suggestion, and would make the acceptance of any functions by a Provincial Government imply the corresponding duty of raising the necessary funds for the purpose, thereby entirely barring an *ad misericordiam* petition.

To further safeguard the Supreme Government I would make it incumbent on Parliament to assume responsibility for deciding how extra money is to be found, should the Province declare its inability.

Para. 51. On first reading your letter, I was under the impression that you suggested that each Province should raise and maintain citizen forces apart from the Imperial Army. I am glad to find that I was mistaken. Under the present conditions of antagonistic races and creeds, anything of that nature would be fraught with grave danger. As, however, I fell into error, it is possible others may too, and I would suggest that you made your view clear.

Para. 53. This is very important.

It is quite sound to let the Indian Government (Supreme) *grant* extra powers as they are on the spot, but, equally, *because* they are on the spot, it would be better if the onus of taking them away were laid upon Parliament.

Before Parliament could take them away—or the Imperial Council, suppose you consider it the duty of that body not yet created—an inquiry under something like the system prevailing in the days of the Company (with of course *adequate* Indian representation) should be obligatory. If it were felt that the laying of such a question (as the *taking away* of functions) before a council on which the Colonies were represented were derogatory to India, the matter might be reserved for the decision of the British Parliament alone.

NO. 6. FROM MISSIONARIES

Herewith the letter and criticisms of two folk who think on these things. As we all three talked them over together, I feel that as far

have a fair chance of 'making good', might not the limited period of time cause them either to make a splash with ill-considered schemes or else to fear undertaking new projects the ultimate results of which might not be realized by themselves?

If ten years is too long, perhaps seven years would be a fair compromise.

Para. 48. This is a very serious objection. There is *no doubt whatever* that Indians have a great reluctance to imposing taxation. In addition to a natural aversion from unpopularity there is strongly imbedded in the Indian mind the idea that the Supreme Government is the *ma-bap*, a *deus ex machina*, which can always be relied upon to pull up buckets of silver from a mysterious well. To further safeguard the Supreme Government I would make it incumbent on Parliament to assume responsibility for deciding how extra money is to be found, should the Province declare its inability.

Para. 51. On first reading your letter, I was under the impression that you suggested that each Province should raise and maintain citizen forces apart from the Imperial Army. I am glad to find that I was mistaken. Under the present conditions of antagonistic races and creeds, anything of that nature would be fraught with grave danger. As, however, I fell into error, it is possible others may too, and I would suggest that you made your view clear.

Para. 53. This is very important.

It is quite sound to let the Indian Government (Supreme) *grant* extra powers as they are on the spot, but, equally, *because* they are on the spot, it would be better if the onus of taking them away were laid upon Parliament.

Before Parliament could take them away—or the Imperial Council, suppose you consider it the duty of that body not yet created—an inquiry under something like the system prevailing in the days of the Company (with of course *adequate* Indian representation) should be obligatory. If it were felt that the laying of such a question (as the *taking away* of functions) before a council on which the Colonies were represented were derogatory to India, the matter might be reserved for the decision of the British Parliament alone.

NO. 6. FROM MISSIONARIES

Herewith the letter and criticisms of two folk who think on these things. As we all three talked them over together, I feel that as far

as they go I agree with them. There is one aspect of the case that must be taken into account, i.e. the problem of the native states. I travel in a lot of them, meet their rulers and officers, and I gather that Government in them is more corrupt than in British India. There is little or no security. Hence the backwardness of many of them, in spite of mineral riches and great agricultural possibilities. I have seen tables gathered from official publications in which the average taxation per capita in native states is much higher than in British India.

Enclosed in the above was the following letter from an American who has had some years of experience of Indian education.

With regard to Mr. Curtis's letter to Mr. Bhupendra Nath Basu, I wish to say that on the whole I think the letter is a masterpiece, and agree with his plan entirely, with the exception of the criticisms which appear below. I must add that I wish the plan could be made public and discussed as soon as possible. I believe that if it could be put into operation it would effectually stop all agitation.

My principal criticism is with regard to paragraph 33, where the division is made into *transferred* and *reserved powers*. I believe that *Primary or Elementary Education should be included in the first group of transferred powers*. If this is not done I do not think the people will feel that any real power has been given them, as it is an object very near to the heart of all the reformers. Moreover, Primary Education is closely connected with Agriculture and co-operation which are transferred in Group I. If agriculture is given, then agricultural education must be given. Many Co-operative Credit Societies already include primary education among their activities, the work of the society having taught them the value of reading and writing. Many city members are interested in primary education for boys and girls both, who know or care little about agriculture. This would make necessary a *Minister of Education* in para. 35. There would thus be five members of the Provincial Cabinet, which would make an odd number in case of disagreement. I feel very strongly that real interest will not be taken, and that the Government will not feel that it has shouldered a really great responsibility unless primary education be given into their hands from the beginning. If they are to raise provincial revenues, and really have experience in increasing revenues, there is no object for which they will more willingly vote increased taxes. For example, the Philippine Assembly voted large increases for elementary education, before they were ready to lay increased taxes on their constituents for any other object. I believe the surest way to make the whole plan a success would be to transfer control of primary education.

2. I wish also to make a criticism of paragraphs 29 and 30, with regard to the electorate. This is the criticism of an American missionary of 40 years' experience in India. He feels that the *electorate should be larger*, not smaller than at present. It should include all persons of 21 years of age who pay the income tax on Rs. 1,000, or

as they go I agree with them. There is one aspect of the case that must be taken into account, i.e. the problem of the native states. I travel in a lot of them, meet their rulers and officers, and I gather that Government in them is more corrupt than in British India. There is little or no security. I have seen tables gathered from official publications in which the average taxation per capita in native states is much higher than in British India.

Enclosed in the above was the following letter from an American who has had some years of experience of Indian education.

With regard to Mr. Curtis's letter to Mr. Bhupendra Nath Basu, I wish to say that on the whole I think the letter is a masterpiece, and agree with his plan entirely, with the exception of the criticisms which appear below. I must add that I wish the plan could be made public and discussed as soon as possible. I believe that if it could be put into operation it would effectually stop all agitation.

My principal criticism is with regard to paragraph 33, where the division is made into *transferred* and *reserved powers*. I believe that *Primary or Elementary Education should be included in the first group of transferred powers*. If this is not done I do not think the people will feel that any real power has been given them, as it is an object very near to the heart of all the reformers. Moreover, Primary Education is closely connected with Agriculture and co-operation which are transferred in Group I. If agriculture is given, then agricultural education must be given. Many Co-operative Credit Societies already include primary education among their activities, the work of the society having taught them the value of reading and writing. Many city members are interested in primary education for boys and girls both, who know or care little about agriculture. This would make necessary a *Minister of Education* in para. 35. There would thus be five members of the Provincial Cabinet, which would make an odd number in case of disagreement. I feel very strongly that real interest will not be taken, and that the Government will not feel that it has shouldered a really great responsibility unless primary education be given into their hands from the beginning. If they are to raise provincial revenues, and really have experience in increasing revenues, there is no object for which they will more willingly vote increased taxes. For example, the Philippine Assembly voted large increases for elementary education, before they were ready to lay increased taxes on their constituents for any other object. I believe the surest way to make the whole plan a success would be to transfer control of primary education.

2. I wish also to make a criticism of paragraphs 29 and 30, with regard to the electorate. This is the criticism of an American missionary of 40 years' experience in India. He feels that the *electorate should be larger*, not smaller than at present. It should include all persons of 21 years of age who pay the income tax on Rs. 1,000, or

own property to that amount and all persons, who can read and write. Women should be included on equal terms with men. The present small electorate represents only lawyers and landholders, mostly the upper castes.

He feels that nothing would make for a truly responsible government so soon, as that Brahman legislators should consult the wishes of low-caste voters. As to the argument that they are not interested in provincial affairs, I believe that they would speedily become so, if they had a controlling voice, and especially if primary education were under their control. I can think of no better way to stimulate a real desire for education than to give the vote to all literate persons. There would be many other advantages of a wide electorate representing all classes. The taxes would be less likely to be class taxes, bearing more on the poor than on the rich.

3. In connexion with the electorate, there must be some regular plan for *minority representation* in India; so that all classes and religious bodies may find expression. There must be no such thing as the *Jerrymander* (*Gerrymander*?) in America. Accumulative voting has already been tried in India. (There being two votes given to each voter, when there are two candidates, a minority of more than 33 $\frac{1}{3}$ % is sure to elect one candidate.)

Another plan is to permit minorities of several election districts to combine to elect a candidate, provided their total exceeds a certain population, which would normally have one representative. I would be glad to give details of the possibilities of such plans, if Mr. Curtis should desire them.

NO. 7. FROM A TEACHER

I think most people who realize how greatly India has changed and developed in the last generation will endorse the view set forth in paras. 4 and 5, that the declared aim of British policy should no longer be merely to govern India for the benefit of the Indians, but to enable Indians to govern themselves. In para. 7 it is proposed that this aim should be set forth in the preamble of a written constitution, like that of the United States, which will determine the future relations, not only of India, but of all the Dominions, to the Mother Country. To this I think there are several objections. Firstly, as you admit in para. 8, the British are naturally averse to committing themselves to statements of general principles, and the British constitution, as it exists, is based rather upon tradition than upon documents. Secondly, it seems very doubtful whether such a constitution, involving as it does the establishment of an Imperial Parliament and the dethronement of England from her position as the 'Mother Country' to one of equality with the Dominions, could be brought into existence at a single stroke. The Dominions, as well as the people of Great Britain, will have much to say on the question, and they have not yet spoken.¹ It seems more probable

¹ Since this was written, General Smuts has spoken plainly against any strict form of federation.

The first of these is the fact that the majority of the population of the world is now living in urban areas. This has led to a rapid increase in the number of people living in cities, and has resulted in a corresponding increase in the number of people living in slums. The second factor is the fact that the majority of the population of the world is now living in the tropics. This has led to a rapid increase in the number of people living in tropical areas, and has resulted in a corresponding increase in the number of people living in slums. The third factor is the fact that the majority of the population of the world is now living in the developing countries. This has led to a rapid increase in the number of people living in developing countries, and has resulted in a corresponding increase in the number of people living in slums. The fourth factor is the fact that the majority of the population of the world is now living in the developing countries. This has led to a rapid increase in the number of people living in developing countries, and has resulted in a corresponding increase in the number of people living in slums. The fifth factor is the fact that the majority of the population of the world is now living in the developing countries. This has led to a rapid increase in the number of people living in developing countries, and has resulted in a corresponding increase in the number of people living in slums.

The sixth factor is the fact that the majority of the population of the world is now living in the developing countries. This has led to a rapid increase in the number of people living in developing countries, and has resulted in a corresponding increase in the number of people living in slums. The seventh factor is the fact that the majority of the population of the world is now living in the developing countries. This has led to a rapid increase in the number of people living in developing countries, and has resulted in a corresponding increase in the number of people living in slums. The eighth factor is the fact that the majority of the population of the world is now living in the developing countries. This has led to a rapid increase in the number of people living in developing countries, and has resulted in a corresponding increase in the number of people living in slums. The ninth factor is the fact that the majority of the population of the world is now living in the developing countries. This has led to a rapid increase in the number of people living in developing countries, and has resulted in a corresponding increase in the number of people living in slums. The tenth factor is the fact that the majority of the population of the world is now living in the developing countries. This has led to a rapid increase in the number of people living in developing countries, and has resulted in a corresponding increase in the number of people living in slums.

own property to that amount and all persons, who can read and write. Women should be included on equal terms with men. The present small electorate represents only lawyers and landholders, mostly the upper castes.

He feels that nothing would make for a truly responsible government so soon, as that Brahman legislators should consult the wishes of low-caste voters. As to the argument that they are not interested in provincial affairs, I believe that they would speedily become so, if they had a controlling voice, and especially if primary education were under their control. NO. 7. FROM A TEACHER

I think most people who realize how greatly India has changed and developed in the last generation will endorse the view set forth in paras. 4 and 5, that the declared aim of British policy should no longer be merely to govern India for the benefit of the Indians, but to enable Indians to govern themselves. In para. 7 it is proposed that this aim should be set forth in the preamble of a written constitution, like that of the United States, which will determine the future relations, not only of India, but of all the Dominions, to the Mother Country. To this I think there are several objections. Firstly, as you admit in para. 8, the British are naturally averse to committing themselves to statements of general principles, and the British constitution, as it exists, is based rather upon tradition than upon documents. Secondly, it seems very doubtful whether such a constitution, involving as it does the establishment of an Imperial Parliament and the dethronement of England from her position as the 'Mother Country' to one of equality with the Dominions, could be brought into existence at a single stroke. The Dominions, as well as the people of Great Britain, will have much to say on the question, and they have not yet spoken.¹ It seems more probable

¹ Since this was written, General Smuts has spoken plainly against any strict form of federation.

that the change will be effected gradually. The congestion of business in the British Parliament will be relieved by delegating powers to local Parliaments in Ireland, Wales, and Scotland, while the Dominions will be admitted to a share in the control of Foreign Policy and Imperial Defence, first by informal Conferences, of which the War Conference lately held in London is the first, and later by more constitutional machinery. In the end a definite constitution for the whole Empire may be evolved, but it seems likely to take a long time.

These considerations, however, do not lessen the necessity for some public declaration of the aim of British policy in India, which could be effected either by a Royal Proclamation (perhaps most suitable to Indian sentiment) or by the preamble of another Bill for the Better Government of India, by which the first steps would be taken towards carrying out that policy.

These first steps are the really important matter. In para. 11, it is argued that the advance must be by way of Provincial autonomy, and of this I think there can be no doubt. At present the Local Governments and Administrations are tied to the chariot wheels of the Central Government, and until the Provincial Governments are given a definite field of action beyond the control of the Government of India, no real self-government is possible. You, therefore, contemplate (paras. 15, 16) handing over to the Provincial Governments certain specified functions in which the Central Government cannot interfere. This will involve not only the final separation of Imperial from Provincial functions, but also the separation of one Provincial department from another (paras. 17 to 19). You go on to point out (para. 20) that the great variety of conditions in the different Provinces is a strong argument for allowing each Province to progress on its own lines and at its own pace, and (para. 21) you argue that the lesson of self-government can only be taught by giving real responsibility to ministers dependent on the popular will. To all this I can see no objection. The further step, proposed in para. 24, viz. the abolition of the official vote from the Provincial Legislative Councils, seems more open to doubt. You argue that by abolishing the official voters we shall get rid of the racial division between the British and the Indian members, and that then two or more real Indian parties will grow up. I doubt if this would be the result. In the last resort, the power to accept or refuse resolutions of the Council would still remain with the Executive, and there would be a danger that the Indian Members would combine to oppose measures which the Government felt bound to introduce (e.g. Police or Press bills) and even to produce an impasse such as the Irish Party have often set themselves to effect at Westminster. If we contemplate the further proposal set forth in para. 33 that certain departments should be handed over to Indian Ministers responsible to the Legislative Council, the anomalous position would arise that the Indian members controlling departments would have votes, while

that the change will be effected gradually. The congestion of business in the British Parliament will be relieved by delegating powers to local Parliaments in Ireland, Wales, and Scotland, while the Dominions will be admitted to a share in the control of Foreign Policy and Imperial Defence, first by informal Conferences, of which the War Conference lately held in London is the first, and later by more constitutional machinery. In the end a definite constitution for the whole Empire may be evolved, but it seems likely to take a long time.

These considerations, however, do not lessen the necessity for some public declaration of the aim of British policy in India, which could be effected either by a Royal Proclamation (perhaps most suitable to Indian sentiment) or by the preamble of another Bill for the Better Government of India, by which the first steps would be taken towards carrying out that policy.

These first steps are the really important matter. In para. 11, it is argued that the advance must be by way of Provincial autonomy, and of this I think there can be no doubt. At present the Local Governments and Administrations are tied to the chariot wheels of the Central Government, and until the Provincial Governments are given a definite field of action beyond the control of the Government of India, no real self-government is possible. To all this I can see no objection. The further step, proposed in para. 24, viz. the abolition of the official vote from the Provincial Legislative Councils, seems more open to doubt. You argue that by abolishing the official voters we shall get rid of the racial division between the British and the Indian members, and that then two or more real Indian parties will grow up. I doubt if this would be the result. In the last resort, the power to accept or refuse resolutions of the Council would still remain with the Executive, and there would be a danger that the Indian Members would combine to oppose measures which the Government felt bound to introduce (e.g. Police or Press bills) and even to produce an impasse such as the Irish Party have often set themselves to effect at Westminster. If we contemplate the further proposal set forth in para. 33 that certain departments should be handed over to Indian Ministers responsible to the Legislative Council, the anomalous position would arise that the Indian members controlling departments would have votes, while

their English colleagues would not. It seems to me that it would be wiser to make no such invidious distinction between the English and Indian Members of the Legislative Council in the matter of voting, it being understood that the unofficial element in the Council should have a real and substantial majority.

In para. 25 you argue that a reform of the electoral machinery is necessary in order to enable the electors to control Provincial as well as merely Municipal issues, and with this view I am in agreement. To revert to the really crucial proposal in para. 33, &c., viz. that certain departments should be transferred to the unfettered control of the Legislative Council for a period of five years, after which they should be taken back, if the experiment proved a failure, the following difficulties occur to me as likely to arise.

- (1) The transfer would be practically irrevocable, because, even if the experiment were a failure, this would be ascribed by the Indian press solely to interference by Government, and the clamour raised for increased powers would effectually prevent the resumption of any given powers, however badly they had been exercised.
- (2) The Ministers in charge of the transferred Departments, not being members of the Provincial Executive Government, would tend to be in permanent opposition to the Government, backed by all their constituents in the Legislative Council.
- (3) These ministers would be too obviously on trial, and would not unnaturally resent their position, which would be analogous to that of children playing at being Papa and Mamma. If they were really children, they might be willing to follow advice, but as they consider themselves very much grown up, they would become more and more antagonistic to the controlling authority.
- (4) In paras. 40-3, it is proposed that any new taxes required by these Ministers should be submitted to the Central Government for sanction. In this connexion, it appears that, even if such a new tax were opposed by the Provincial Government, the Legislative Council could, nevertheless, get it passed by the Central Government, and this would almost certainly create a position of difficulty and danger.

Paras. 44 and 45 contemplate the lapse of transferred powers in case of failure after five years' trial. The objections to this have already been pointed out.

In para. 47, the objection that a 'dyarchy' is impossible is raised and met. As between the Central and Provincial Governments a dyarchy appears quite feasible: but it may be pointed out that the Provincial Government itself under the proposed system would also be a dyarchy, which I do not think would be successful for the reasons already stated.

The objection raised in para. 48 seems to be a real one. It is said that the Provincial Ministries, instead of imposing fresh taxation

their English colleagues would not. It seems to me that it would be wiser to make no such invidious distinction between the English and Indian Members of the Legislative Council in the matter of voting, it being understood that the unofficial element in the Council should have a real and substantial majority.

In para. 25 you argue that a reform of the electoral machinery is necessary in order to enable the electors to control Provincial as well as merely Municipal issues, and with this view I am in agreement. To revert to the really crucial proposal in para. 33, &c., viz. that certain departments should be transferred to the unfettered control of the Legislative Council for a period of five years, after which they should be taken back, if the experiment proved a failure, the following difficulties occur to me as likely to arise.

- (1) The transfer would be practically irrevocable, because, even if the experiment were a failure, this would be ascribed by the Indian press solely to interference by Government, and the clamour raised for increased powers would effectually prevent the resumption of any given powers, however badly they had been exercised.
- (2) The Ministers in charge of the transferred Departments, not being members of the Provincial Executive Government, would tend to be in permanent opposition to the Government, backed by all their constituents in the Legislative Council.
- (3) These ministers would be too obviously on trial, and would not unnaturally resent their position, which would be analogous to that of children playing at being Papa and Mamma. If they were really children, they might be willing to follow advice, but as they consider themselves very much grown up, they would become more and more antagonistic to the controlling authority.
- (4) In paras. 40-3, it is proposed that any new taxes required by these Ministers should be submitted to the Central Government for sanction. In this connexion, it appears that, even if such a new tax were opposed by the Provincial Government, the Legislative Council could, nevertheless, get it passed by the Central Government, and this would almost certainly create a position of difficulty and danger.

Paras. 44 and 45 contemplate the lapse of transferred powers in case of failure after five years' trial. The objections to this have already been pointed out.

In para. 47, the objection that a 'dyarchy' is impossible is raised and met. As between the Central and Provincial Governments a dyarchy appears quite feasible: but it may be pointed out that the Provincial Government itself under the proposed system would also be a dyarchy, which I do not think would be successful for the reasons already stated.

The objection raised in para. 48 seems to be a real one. It is said that the Provincial Ministries, instead of imposing fresh taxation

for their own needs, would merely badger the Local Government to cut down expenditure in reserved departments and hand over the savings to the transferred departments. This would be a part of the organized opposition of these Ministries to Government which has been noted as a probable result of the system.

Paras. 49, &c., contemplate the gradual transfer of more powers to Provincial Ministries until complete local self-government was reached, when the Government of India itself would receive autonomy from Parliament in the same way as the Great Dominions.

It is true that the only way to educate men for self-government is to give them responsibility, and it is admitted that our aim should be the establishment of the principles of Dominion autonomy in India by way of Provincial autonomy, but it seems to me that there are serious difficulties and dangers in the steps proposed to this end, and that we ought to devise a means of gradually transferring powers to Indians and educating them for self-government by associating them directly with ourselves in the work of Government instead of putting them into separate compartments and criticizing them from afar. For many years to come India should and must be administered by Englishmen as well as by Indians, and whatever parties may be formed in future, they should not be allowed to crystallize into racial groups.

NO. 8. FROM A EUROPEAN ENGAGED IN COMMERCE

As a criticism on the proposals in your letter to Mr. Bhupendra Nath Basu I have put together a few notes which I think will probably enable you to realize some of the reasons why your projected scheme, as outlined in the letter, cannot in its present form be accepted by the British Commercial Community in India. I am going to write plainly, and this you will, I am certain, appreciate.

1. I am not sure whether you realize both the importance and the peculiar position of this Community. Your letter does not refer to it; in several places you mention the Indian and the Official; in no place do you mention British Trade; I am afraid, therefore, that it must convey a wrong impression to many of the Indians who read it, for they will at once assume that the proposals concern themselves and Officials only, and that British Traders can be left out of account.

I know myself that this is far from being your view, but the impression has undoubtedly been conveyed to some of the British Commercial Community here to whom I have shown the letter, and it is dangerous in the highest degree that it should become a general one.

2. In numbers the purely unofficial British Community in India is very small; in Calcutta it probably does not exceed 3,000 at the present time; for the whole of India a figure is very difficult to obtain, but I think if we put it at 10,000 we shall be on the high side.

It consists almost entirely of men who are not their own masters, but are representatives of numerous shareholders in limited com-

for their own needs, would merely badger the Local Government to cut down expenditure in reserved departments and hand over the savings to the transferred departments. This would be a part of the organized opposition of these Ministries to Government which has been noted as a probable result of the system.

Paras. 49, &c., contemplate the gradual transfer of more powers to Provincial Ministries until complete local self-government was reached, when the Government of India itself would receive autonomy from Parliament in the same way as the Great Dominions.

It is true that the only way to educate men for self-government is to give them responsibility, and it is admitted that our aim should be the establishment of the principles of Dominion autonomy in India by way of Provincial autonomy, but it seems to me that there are serious difficulties and dangers in the steps proposed to this end, and that we ought to devise a means of gradually transferring powers to Indians and educating them for self-government by associating them directly with ourselves in the work of Government instead of putting them into separate compartments and criticizing them from afar. For many years to come India should and must be administered by Englishmen as well as by Indians, and whatever parties may be formed in future, they should not be allowed to crystallize into racial groups.

NO. 8. FROM A EUROPEAN ENGAGED IN COMMERCE

As a criticism on the proposals in your letter to Mr. Bhupendra Nath Basu I have put together a few notes which I think will probably enable you to realize some of the reasons why your projected scheme, as outlined in the letter, cannot in its present form be accepted by the British Commercial Community in India. I am going to write plainly, and this you will, I am certain, appreciate.

1. I am not sure whether you realize both the importance and the peculiar position of this Community. Your letter does not refer to it; in several places you mention the Indian and the Official; in no place do you mention British Trade; I am afraid, therefore, that it must convey a wrong impression to many of the Indians who read it, for they will at once assume that the proposals concern themselves and Officials only, and that British Traders can be left out of account.

I know myself that this is far from being your view, but the impression has undoubtedly been conveyed to some of the British Commercial Community here to whom I have shown the letter, and it is dangerous in the highest degree that it should become a general one.

2. In numbers the purely unofficial British Community in India is very small; in Calcutta it probably does not exceed 3,000 at the present time; for the whole of India a figure is very difficult to obtain, but I think if we put it at 10,000 we shall be on the high side.

It consists almost entirely of men who are not their own masters, but are representatives of numerous shareholders in limited com-

panies, and of capitalists in private concerns, who are resident in England, after having spent a large portion of their lives in India.

It therefore follows that an infinitesimally small number of these men can afford the time necessary for taking a large part in public affairs, and few indeed of these would be justified in accepting a portfolio in your new proposal for Provincial Self-Government. The result of your proposals, therefore, would be that your Ministry would be composed of those Indians who might be styled professional politicians, and the control would pass largely to them instead of remaining in the hands of the Civil Service, who may, to a certain extent, be looked upon as the representatives of the British Traders in the Government of the country, and the guarantors to them that they will be justified in investing their money in India.

3. But though in numbers the British Commercial Community is small, yet in its capital, in its enterprise, in its commercial integrity, in all the attributes which now do and will further in the future, contribute towards the peace and prosperity of British India, its importance cannot be over-estimated.

I say without fear of contradiction that it is British Commerce which has made India what it is, and that the unofficial British have done more to mould the character, to improve the standard of living, and to increase the prosperity of India than all the Civilians who have ever been born.

Naturally few British non-officials have come before the public eye, for they have done their work quietly and unobtrusively; you may blame them for not having taken a larger share in public life, for having made their large and small fortunes and retired to their mother country, perhaps without much regret; but sift matters to the bottom and consider what a poor place India would have been without unofficial British, and I am sure you will agree with me that our Commercial Community have played a very large part and must have a very large say in any proposals for the future Government of India.

4. Let us now consider how the British Commercial Community has contributed to the prosperity of India. I don't propose to consider the history of the old John Company and the pioneers of British Trade in India, but purely to examine the position as it is at present.

As an example let me take the trade and manufactures of Bengal.

Jute Manufacture.—In Bengal there are 63 Mills, with a block value of approximately £16,000,000. They employ about 252,000 Indian skilled labourers at an average wage of about Rs16 monthly. Their turnover is about Rs42,60,00,000 yearly.

They are entirely managed by British, and their capital is almost entirely subscribed by British.

Tea Gardens.—In Bengal alone there are 300 Tea Concerns, with a capital of about £19,000,000 and a yearly outturn of Rs5,13,00,000. They employ about 133,000 Indian labourers. By far the larger part of the total Capital in Tea is British.

[The text in this section is extremely blurry and illegible. It appears to be a multi-paragraph document, possibly a letter or a report, with several lines of text visible but not readable.]

panies, and of capitalists in private concerns, who are resident in England, after having spent a large portion of their lives in India.

It therefore follows that an infinitesimally small number of these men can afford the time necessary for taking a large part in public affairs, and few indeed of these would be justified in accepting a portfolio in your new proposal for Provincial Self-Government. The result of your proposals, therefore, would be that your Ministry would be composed of those Indians who might be styled professional politicians, and the control would pass largely to them instead of remaining in the hands of the Civil Service, who may, to a certain extent, be looked upon as the representatives of the British Traders in the Government of the country, and the guarantors to them that they will be justified in investing their money in India.

3. But though in numbers the British Commercial Community is small, yet in its capital, in its enterprise, in its commercial integrity, in all the attributes which now do and will further in the future, contribute towards the peace and prosperity of British India, its importance cannot be over-estimated.

I say without fear of contradiction that it is British Commerce which has made India what it is, and that the unofficial British have done more to mould the character, to improve the standard of living, and to increase the prosperity of India than all the Civilians who have ever been born.

Naturally few British non-officials have come before the public eye, for they have done their work quietly and unobtrusively; you may blame them for not having taken a larger share in public life, for having made their large and small fortunes and retired to their mother country, perhaps without much regret; but sift matters to the bottom and consider what a poor place India would have been without unofficial British, and I am sure you will agree with me that our Commercial Community have played a very large part and must have a very large say in any proposals for the future Government of India.

4. Let us now consider how the British Commercial Community has contributed to the prosperity of India. I don't propose to consider the history of the old John Company and the pioneers of British Trade in India, but purely to examine the position as it is at present.

As an example let me take the trade and manufactures of Bengal.

Jute Manufacture.—In Bengal there are 63 Mills, with a block value of approximately £16,000,000. They employ about 252,000 Indian skilled labourers at an average wage of about Rs16 monthly. Their turnover is about Rs42,60,00,000 yearly.

They are entirely managed by British, and their capital is almost entirely subscribed by British.

Tea Gardens.—In Bengal alone there are 300 Tea Concerns, with a capital of about £19,000,000 and a yearly outturn of Rs5,13,00,000. They employ about 133,000 Indian labourers. By far the larger part of the total Capital in Tea is British.

Coal Mining.—There are 530 coal companies in Bengal and Behar and Orissa, with a capital of about £4,000,000, and yearly output of 15,500,000 tons coal, value about Rs4,75,00,000 at pit's mouth. The number of Indians employed in coal mines is estimated at 135,000, and the average wage earned is about 6 annas daily. By far the greater part of the coal output is from British-owned companies.

Imports and Exports.—In the year 1916-17 the foreign Imports to Calcutta were valued at Rs56,54,00,000, and the Exports from Calcutta at Rs96,06,00,000. I estimate that 75 per cent. of this huge trade was in British hands.

Banking.—There is not a single Bank in Calcutta of any standing managed by Indians. Those few which have been established have proved entire failures owing to bad management.

Shipping.—With the exception of one small Indian Inland Shipping Company there are no Indian-owned lines trading with Calcutta.

In 1916-17 the total tonnage of ships entering Indian Ports engaged in Foreign trade was 5,900,000, and of this about 77 per cent. was British.

5. I think that these figures will bring out my point with sufficient clearness—that no system of Self-Government can be tolerated which does not fully protect the vast interests of the British Commercial Community.

Now para. 32 of your Study assumes that the Provincial Councils are to be directly elected by primary votes and that Officials will have no vote. Let me examine the present membership of the Bengal Legislative Council and see what effect your proposal would have.

The present Council is composed as follows :

- 3 British Officials ex officio.
- 10 British Officials nominated by the Governor.
- 2 Indian " " "
- 3 British Non-Officials " "
- 5 Indian " " "
- 5 British Non-Officials elected by the members of the Chamber of Commerce and other bodies.
- 23 Indian Non-Officials elected by various bodies.

Total 51, of which 30 are Indians and 21 British.

Delete the Official members and we have a Council composed of 23 Indians and 8 British. You will say that I am proposing to make a racial question of it ; I am not, so I will put it in another way.

I do not claim that the British should be in strength on the Bengal Council because they are British alone, but chiefly because of the Interests they represent.

Coal Mining.—There are 530 coal companies in Bengal and Behar and Orissa, with a capital of about £4,000,000, and yearly output of 15,500,000 tons coal, value about Rs4,75,00,000 at pit's mouth. Delete the Official members and we have a Council composed of 23 Indians and 8 British. You will say that I am proposing to make a racial question of it ; I am not, so I will put it in another way.

I do not claim that the British should be in strength on the Bengal Council because they are British alone, but chiefly because of the Interests they represent.

In a Bengal Council denuded of its Official members, whom the non-official British interests regard as their safeguard, you would have an Indian majority which would be able to deal as it wished with the Jute, Tea, and Coal Interests, with the Import and Export trades and Shipping, with the Interests of the Trades Association, with the Interests of the unofficial British generally, and last, but not least, with the Interests of the Domiciled British.

This majority in Bengal would be composed almost exclusively of landlords and lawyers, none of whom have the least knowledge of the interests which I have cited.

6. Therefore the British Commercial Community must insist that if the Bengal Council is to be made an entirely Unofficial Parliament for certain purposes, and if their interests and the interests of Commerce generally are to come under the sway of the Provincial Parliaments, then these interests, which it is claimed are as necessary for the welfare of India as all the interests represented by all the Zemindars and Lawyers of Bengal combined, must be protected by a membership on the Council sufficiently large and important to prevent any undue interference with their industries and trade.

7. How then can we provide an elected Council which will adequately represent the different interests, without racial distinction, but in proportion to their importance to the Province of Bengal.

On the one side you have the Zemindars, all wealthy men of leisure corresponding to the leisured class in Great Britain, and the lawyers who come largely from the same families as the Zemindars, and of whom many are sufficiently well off to take up politics as a profession. On the other side you have not a single member of the leisured class, hardly a man who can call his time his own, men who are working hard for their living, and who cannot possibly afford to give up their time to sitting in Parliament and doing the work of Ministers.

Now, are you going to get over this difficulty, for you must get over it if you are to have our support.

I have so far said that we must be represented, and I now say that we cannot find the men to do the work. It is not an easy problem.

You propose to destroy a Government in which British Commerce trusts, and to put in its place one in which British Commerce cannot trust.

If you destroy the present Government you must put something in its place which will ensure that our Interests are safeguarded as at present, and that we are not placed at the mercy of Bengali Zemindars and Lawyers, and I am satisfied that you are attempting an impossibility.

8. Now, having given my views as to the British Commercial Community because I wish to emphasize the difficulties of this part of the problem first, since it most nearly concerns myself and those I represent, I want to go back to paras. 29-32 of your Study.

The first part of the paper discusses the importance of the research and the objectives of the study. It also outlines the methodology used in the study and the data sources. The second part of the paper presents the results of the study and discusses the implications of the findings. The third part of the paper concludes the study and provides recommendations for future research.

The results of the study show that there is a significant positive relationship between the independent variable and the dependent variable. This finding is consistent with the previous research in this area. The implications of the findings suggest that the independent variable can be used to predict the dependent variable.

The study also found that there is a significant negative relationship between the independent variable and the dependent variable. This finding is inconsistent with the previous research in this area. The implications of the findings suggest that the independent variable can be used to predict the dependent variable.

The study also found that there is a significant positive relationship between the independent variable and the dependent variable. This finding is consistent with the previous research in this area. 8. Now, having given my views as to the British Commercial Community because I wish to emphasize the difficulties of this part of the problem first, since it most nearly concerns myself and those I represent, I want to go back to paras. 29-32 of your Study.

In this connexion I will quote the words of a friend who does not want his name to be divulged, but whose knowledge of the subject is undoubted.

He writes: 'There is a general impression that the present system of governing India will have to be modified before long. The question is, modified in what direction ?

'Here again the impression, though vague, seems to be fairly general, namely that the object aimed at must be to make India more self-governing—to give the people of India more real power and responsibility in the administration of their own country. Now, the only form of administration which we English understand is representative Government. I cannot now discuss the question how far India is ready for representative Government of any kind; but I don't see how the present system can be modified by us except in that direction.

'We cannot establish more Native States, but any form of representative Government, however limited, depends absolutely on the possibility of being able to form an electorate. Curtis makes this point perfectly clear, and I agree with him. Indeed, it must be so. The Electorate may be limited, but without an electorate you cannot have any form of representative Government.

'The practical question therefore is for Bengal—Bengal is the only part of India that I know—can a responsible electorate be formed ?

'Personally I am doubtful.

'You must remember that the only direct electorate of any importance is the Muhomedan¹ electorate for the Provincial and Imperial Councils. The non-Muhomedan elected members of the Provincial Council are elected by District Boards and Municipalities.

'What I want to emphasize is this, that no political step forward has been taken when you have substituted in whole or in part an Indian Bureaucracy for an English Bureaucracy.

'By all means recognize the claims of competent Indians to office.

'That is being done every day and is bound to be done more in the future for the simple reason that there will not be for the next twenty years Englishmen available, but if all that is possible is "Substituting Indian Officials for English"—this may or may not be desirable—the whole of Curtis's work falls to the ground and is something which becomes purely of academic interest. I hope I have made myself clear.'

9. I have quoted the above because I personally know little about the qualifications of the country Indian for a vote. If, however, it is a fact that a sufficient electorate is not forthcoming, I mean by this an electorate capable of understanding the issues which would come before a Provincial Parliament, the only result of your proposed scheme would most undoubtedly be to substitute a badly-elected Indian for a well-chosen Britisher.

This may satisfy the extremist, but it will most certainly lead to the worse governing of India.

Until, therefore, we can educate an electorate it appears to me quite clear that we cannot have a Representative and Responsible Parliament. But this does not mean that we can do nothing.

We can work in three ways :

(a) Gradually educate the elector by giving Municipalities and District Boards more powers and controlling them less.

(b) Educate the politician by giving him first much more opportunities for giving advice, with the idea of his being given eventually a share of responsibility.

(c) Decentralize by giving Provincial Governments much greater powers.

10. With regard to (a) above you point out on page 32 of your Studies No. 1¹ that in the Central Provinces the practice of making the District Councils independent of the Collector as Chairman has succeeded.

If this were tried elsewhere it would be a very real advance towards self-government, and one of the most practical steps that could be taken.

The greater freedom a District Board has, the greater interest will the people take in its doings, and as a first step, and a step which will be sufficient as regards representative Government for many years to come, I advocate it.

But of course the drawback even to Independent District Boards in most of Bengal is that there will be the grossest and most open forms of corruption, and that the people will, instead of demanding better roads, &c., prefer to pay less taxes.

A good Collector makes his Boards insist on better roads even if it means higher taxation : I am pretty sure that we shall see the opposite with independent Boards.

11. As regards 9 (b), I am sure you are going a great deal too fast by proposing a Parliament with Ministers. We must teach the Indian to consider questions of State, possibly allow him in one or two instances to see the results of foolish advice, before we can ever give him the responsibility of acting on his own and the chance of ruining the country.

It seems to me, therefore, that the Provincial Legislative Councils should be made into *real* Advisory Councils, with the Governor as head to take the advice given or not as he thinks best.

I have not thought out the details, but roughly the following appeals to me :

(a) Greatly reduce the Official vote, so that there may be no question of Officials *v.* Non-Officials.

I am not in favour of entirely scrapping the official vote, but I see no reason why officials should not vote with either party.

(b) Appoint Standing Committees for various subjects just as is

¹ P. 229 of this edition.

This may satisfy the extremist, but it will most certainly lead to the worse governing of India.

¹ P. 229 of this edition.

done in the Municipalities, Port Trusts, &c. These would be a combination of Officials and non-officials, and their Secretary would be the Official Secretary or Under-Secretary in the respective department.

All proposals for Legislation, whether introduced by Government or by a private individual, would go before the Standing Committee. The latter would have full access to Government records on the subject, and would be given ample time to examine the proposed Legislation and report on it.

(c) When a proposal had been reported on by the Standing Committee it would go back to the Governor who might accept it or suggest amendments, and finally it would go before the Council.

(d) The Governor would not be obliged to accept from his Council any proposals made by them, nor to accept their adverse decision on any proposal of his own, but he would undoubtedly normally do so.

(e) If the Governor thus exercised his power of refusing to accept the decision of his Council, the latter might be allowed, if they wished to do so, to bring the matter again before the Standing Committees and the Councils after a certain lapse of time, say three years; when, if the Governor and his Council could still not agree, the matter might be referred to the Viceroy.

(f) The qualifications for membership of the Provincial Councils must of course be revised. Commercial Interests, chiefly British, must be safeguarded in the large towns and in areas where they are especially prominent, by a much increased representation.

One of the qualifications must be a genuine residential one in the District represented.

Doubtless in many other directions changes will have to be made.

12. As regards 9 (c), we were promised greater control for the Provinces as one of the boons along with Delhi. What has been the result? Absolutely nothing.

The questions of purely local interest discussed in the Imperial Council are numerous; in matters which affect the Provinces only Delhi and Simla interfere; if we Commercial individuals want anything done, we appeal direct to Delhi or Simla, because we know that an appeal to the Local Government will have to be passed on, and the answer will be delayed for weeks.

13. This then is the extent to which I should be personally prepared to go at present (a) to teach the electors to elect, (b) to teach the politicians to consider and advise, (c) to give the Local Governors and through them the Councils, a more complete control in their own Provinces, divorced from the continual supervision of the Viceroy's Council.

This will not satisfy the extremists; I believe it will satisfy the moderates; but what we must remember is that it is not our duty simply to satisfy one section, influential and talkative though it may be, of India's politicians, but to consider how we can best govern India and teach India to govern herself.

If we make a false step, if we allow India to attempt to govern herself before she is ready for it, the result can only be disaster and confusion, leading eventually to one inevitable climax—the reconquering of India.

In the long run it will be better to give what we believe to be right at the right time, even if all are not satisfied, and even if we have to face for a time a very troublous period, than to give what we know is too much and to have to withdraw afterwards what we have given.

I think that one of your own principles is that it is better to stick to what you believe to be right rather than to give way to what you believe to be wrong because it is the easier way.

It is the old story of the narrow path beset with difficulties and the broad path which leads to destruction.

We cannot treat India like a Colony, and we must insist that for many years to come the British Raj in India must be paramount.

NO. 9. FROM A MISSIONARY AND TEACHER

1. The general principles of gradual devolution to a responsible executive is obviously sound, and the details of your Schedules on the whole commend themselves. The only criticisms I have to make on them are :

(a) THE OPIUM DEPARTMENT—is essentially imperial and not provincial : it is just the working of a state monopoly and does not affect the welfare of the people. I don't really know why its personnel is provincial now. It only operates (I think) in three Provinces ; and sales are all in Calcutta.

(b) FACTORIES—I should be inclined to transfer this to Schedule III. It is a case, *like the old Transvaal one*, of big financial interests belonging mainly to a community practically unrepresented. Moreover, your legislatures, drawn exclusively from the professions and the landed interests, will be more incompetent even than most legislatures to deal with factory control.

2. But what I chiefly want to say is that the question of the *franchise* is what requires the most careful investigation.

What one wants is, of course, something elastic—something that will meet present conditions but will not have to be revised in principle and will expand naturally with the development of the country.

Now we are up against several tough facts, the first of which is that the Government of India have given us a false start in the franchise based on religious communities. I do not see how we can get on at all unless we throw that over.

Then there is the fact that, though there is the basis of a reasonable Electoral system in Municipal areas, there is absolutely nothing at present that can be called an Electorate for rural districts. And you must remember that the Municipalities are a smaller proportion of the whole than in any other country, and that town dwellers and their leaders are getting increasingly out of touch with the rural

Abstract

[illegible]

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

100

population and agricultural interests. Somehow the electoral system ought to establish a contact with the village *Panchayat*.

And there is the bogey of *Caste*. I think it probable that the reason why the Hindu community acquiesced in the separate electorate of Moslems was that they saw in it a principle which might be used in the interests of the caste system. It must never be forgotten that politics, as they are understood in this country, are largely influenced by the Brahman interest. Our electoral system ought to be laid on such lines that caste distinctions cannot be introduced into it.

3. These considerations make a problem of very great complexity, which you *seem* to have dismissed as if it were a comparatively small matter. Quite probably I am wrong in getting the impression that you have not got a view of the difficulties that lie here. Possibly again I am wrong in thinking that the franchise settlement is of absolutely primary importance at the beginning of things. Your experience, of course, enables you to judge of that.

Comments by Indians in the Service of Government.

NO. 10. FROM A SCHOOL INSPECTOR

I think it is but fair that I should begin by a confession. Like most Indians I was dead against the idea of the Colonies having anything to do with the administration of India. No doubt this intense feeling of distrust was due partly to the unjust treatment meted out to Indians in the Colonies and partly to the rough and somewhat overbearing conduct of such colonials as are to be seen in this country. The latter statement must not be interpreted into a sweeping condemnation of all the colonials in India, for personally I am acquainted with one or two whose urbanity, refinement, and sympathy leave little to be desired. All that is meant is that in this respect they suffer when compared to the English gentleman, and the Indians have a natural aversion to the introduction of a new and to them unattractive element in the supreme governing body of their country. A perusal of your open letter to the educated Indians and of your confidential memorandum on Self-Government in India has, however, compelled me to modify my views to a very large extent and personally I am prepared to admit that some such scheme as propounded by you is more likely to hasten the day of Self-Government in India—a consummation which, judging from your note, is as devoutly wished for by you as by the most ardent Indian nationalist. But in order that the scheme of your Imperial Parliament might give the best chance to India and might therefore be acceptable to thoughtful and patriotic Indians, it is essential that India should find an adequate representation in both the proposed Houses and that in dealing with all Indian questions it should be clearly recognized as the basic principle of administration that Self-Government for India was the aim towards

population and agricultural interests. Somehow the electoral system ought to establish a contact with the village *Panchayat*.

NO. 10. FROM A SCHOOL INSPECTOR

I think it is but fair that I should begin by a confession. Like most Indians I was dead against the idea of the Colonies having anything to do with the administration of India. No doubt this intense feeling of distrust was due partly to the unjust treatment meted out to Indians in the Colonies and partly to the rough and somewhat overbearing conduct of such colonials as are to be seen in this country. The latter statement must not be interpreted into a sweeping condemnation of all the colonials in India, for personally I am acquainted with one or two whose urbanity, refinement, and sympathy leave little to be desired. All that is meant is that in this respect they suffer when compared to the English gentleman, and the Indians have a natural aversion to the introduction of a new and to them unattractive element in the supreme governing body of their country. A perusal of your open letter to the educated Indians and of your confidential memorandum on Self-Government in India has, however, compelled me to modify my views to a very large extent and personally I am prepared to admit that some such scheme as propounded by you is more likely to hasten the day of Self-Government in India—a consummation which, judging from your note, is as devoutly wished for by you as by the most ardent Indian nationalist. But in order that the scheme of your Imperial Parliament might give the best chance to India and might therefore be acceptable to thoughtful and patriotic Indians, it is essential that India should find an adequate representation in both the proposed Houses and that in dealing with all Indian questions it should be clearly recognized as the basic principle of administration that Self-Government for India was the aim towards

which not only the whole policy but the machinery of administration had to be directed.

Regarding the practical details of Self-Government in India dealt with in your memorandum, I may at once declare my general agreement with the broad outlines of the scheme formulated by you. I am not, however, convinced that an immediate liberalizing of the Indian Legislative Council side by side with the more radical reform of Provincial Councils is really as hopelessly impracticable as you seem to think; although a careful consideration of the many cogent arguments adduced by you have forced me to admit that the process in the higher council must be much slower and less drastic than in the Provincial Councils. For instance, there is no reason why the electorate for the Viceregal Council should not be more broad based than it is at present. Even if the Provincial Councils retain their privilege of electing the majority of non-official members, it would certainly be an improvement and a step in the right direction if a certain number of members are elected by a general Electorate of well-defined qualifications which will of course be put higher than those prescribed for the Provincial Councils. And since the Indian Legislative Council is to continue under your scheme a purely advisory body, at least for the present, no harm need be anticipated if there is a non-official majority—a state of affairs which Lord Minto was prepared to *accept* when even Minto-Morley reforms were introduced. These are mere instances, for it is not difficult to suggest certain other directions in which the progressive principle might be applied to effect a change.

Allow me to point out that in para. 14 of your memorandum you are not quite right in stating that double Government, or 'dyarchy' as you term it, is altogether foreign to bureaucratic conceptions; for, as a matter of fact, the system already prevails in some forms in the Government of India. For instance, while most of the administrative control of a Province is under the Local Government there are Departments—like the Finance, Posts, and Telegraphs—which are directly under the control of the Government of India. And indeed something in the nature of 'dyarchy' is inevitable if autonomy is to be given to Provincial Councils the existence of which is, as you rightly maintain, essential in a large country like India. So far as Indian sentiment is concerned there is absolutely nothing against the idea.

While agreeing with you entirely that Self-Government in order to be real must depend upon and derive its inspiration from a general electorate, I am of opinion that a suffrage exclusively based upon mere individual qualification is not suited to the actual conditions of the country in its present stage of intellectual development. I have no hesitation in admitting that a general electorate can easily be formed in urban areas which could and would exercise its privilege of voting with intelligence and judgement. But when we come to think of rural tracts I am very much afraid that the general

which not only the whole policy but the machinery of administration had to be directed.

While agreeing with you entirely that Self-Government in order to be real must depend upon and derive its inspiration from a general electorate, I am of opinion that a suffrage exclusively based upon mere individual qualification is not suited to the actual conditions of the country in its present stage of intellectual development. I have no hesitation in admitting that a general electorate can easily be formed in urban areas which could and would exercise its privilege of voting with intelligence and judgement. But when we come to think of rural tracts I am very much afraid that the general

level of education and intelligent appreciation of events not concerned directly with the details of daily duties is so low that it would be nothing short of a farce to ask the ordinary villages to vote for an election in the Provincial Council. In order to stimulate his interest in matters not touching him personally and in order to educate him into taking his share in the larger interests of life it is expedient to revive the time-honoured system of village Panchayats. Communal interests concerning the prosperity of his village will make a direct and intimate appeal to his reason and judgement and he may be trusted to elect the most suitable person as *Panchas*. These village Panchayats should have the privilege of electing members to the District Boards who should again have the right of electing some members to the Provincial Councils. But I see no objection to a gradual introduction of the general suffrage principle side by side with the electoral rights conferred upon such bodies as the village Panchayats and District Boards. For instance, even in the case of District Boards there is no reason why membership in them should be confined to the elections made by the village Panchayats. A qualification test can be devised by means of which persons who are not members of the Panchayats might also exercise their right of electing members to the District Boards. Similarly it is not proposed that by giving to District Boards the power of electing a number of members to the Provincial Council the public 'outside the Boards should have no right of voting. All that it is intended to secure is that by this means of indirect representation the rural areas may have some share, however remote, in the Government of the Province; whereas in a system of general electorate pure and simple the chances are that they will be excluded altogether.

The extent of powers with which the Provincial Councils will be entrusted depends naturally upon their fitness, but you have not mentioned the authority which is to determine the question of fitness. It is to be hoped that the deciding voice will be that of the Imperial Parliament so long as the Government of India is not autonomous.

I wish I could deal with the scheme suggested by you more critically or offer for your consideration more pregnant suggestions, but I am not by nature or education or training a politician, and I must therefore beg of you to treat the few remarks I have ventured to make as coming from an onlooker whose main interest is not in politics.

No. 11

I am much obliged for your note of the 21st instant. There is no doubt at all that after the termination of the War the question of the reconstruction of the machinery governing the British Empire will have to be taken up, and that the affairs of the dominions will perhaps have to be controlled by a Commonwealth Parliament distinct from the present Parliament of Great Britain, which already has too much to do. The representation of India in this assembly may be

I am much obliged for your note of the 21st instant. There is no doubt at all that after the termination of the War the question of the reconstruction of the machinery governing the British Empire will have to be taken up, and that the affairs of the dominions will perhaps have to be controlled by a Commonwealth Parliament distinct from the present Parliament of Great Britain, which already has too much to do. The representation of India in this assembly may be

numerically larger than the self-governing colonies, for the reasons that—

- (a) All the dominions have a preponderance of British blood in their population, are homogeneous to the people of the British Isles in their ways, manners, living, and thinking; and have many relations in the British Isles who are kept well informed by private correspondence of the needs and difficulties of these people in the colonies, while unfortunately no such facilities exist in the case of Indians.
- (b) In political and other respects India is not sufficiently advanced, and has a diversity of interests and races, and hence she stands in need of more help, which can be secured only by larger representation in that assembly.

The Indian point of view should, I think, be placed before the Commonwealth Parliament directly by pure Indians, chiefly elected with a few nominated members from among the aristocracy and the ruling native chiefs.

Your scheme of befitting India for self-government may be quite a frank and genuine one, but I should think that unless a definite goal and time is fixed and determined, suspicion and distrust of Government measures will never cease. The fixing of a goal to be reached in a fixed time will give an impetus to the public, and will exercise a much healthier effect on the public mind.

I hope you know that the burning question of the day is the grant of King's Commissions to Indians in the Army. I do not think that the extension of this privilege will help towards the improvement of Indian administration just at present, but it will surely create a very satisfactory effect on the confidence of the public in the projected scheme of reforms. The public will consider this grant as a sure guarantee for the future. But everything depends on education, and until Government produces a well educated and efficient electorate for the election of suitable members for these assemblies or Provincial Councils, there can be no hope of real improvement. At present the elections are confined to, or have been monopolized by, a few privileged people of the lawyer class, and are not of a really representative nature.

The following Papers are from Senior Members of the I.C.S.

No. 12

It appears of capital importance to obtain the clear recognition of the principle enunciated in para. 5 of your letter. It has been largely lost sight of in the administration of the last sixty years. Even now there will be many officials who will not assent to it. There will be many others who, while admitting it as a general proposition, will not admit it as a principle to be the one guiding their actions, or to be anything but something rather remote with which we have no particular concern just at present.

the first of these, the *Leptacanthus* of the lower Devonian, and the second, the *Leptacanthus* of the lower Devonian.

The first of these, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind. The second, the *Leptacanthus* of the lower Devonian, is a larger, more robust creature, with a more rounded body, and a larger, more pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

The third, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

The fourth, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

The fifth, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

The sixth, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

The seventh, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

The eighth, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

The ninth, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

The tenth, the *Leptacanthus* of the lower Devonian, is a small, slender, fish-like creature, with a long, tapering body, and a small, pointed snout. It is found in the lower Devonian of the English Lake District, and is the only one of its kind.

numerically larger than the self-governing colonies, for the reasons that—

- (a) All the dominions have a preponderance of British blood in their population, are homogeneous to the people of the British Isles in their ways, manners, living, and thinking; and have many relations in the British Isles who are kept well informed by private correspondence of the needs and difficulties of these people in the colonies, while unfortunately no such facilities exist in the case of Indians.
- (b) In political and other respects India is not sufficiently advanced, and has a diversity of interests and races, and hence she stands in need of more help, which can be secured only by larger representation in that assembly.

The Indian point of view should, I think, be placed before the Commonwealth Parliament directly by pure Indians, chiefly elected with a few nominated members from among the aristocracy and the ruling native chiefs.

Your scheme of befitting India for self-government may be quite a frank and genuine one, but I should think that unless a definite goal and time is fixed and determined, suspicion and distrust of Government measures will never cease. The fixing of a goal to be reached in a fixed time will give an impetus to the public, and will exercise a much healthier effect on the public mind.

I hope you know that the burning question of the day is the grant of King's Commissions to Indians in the Army. I do not think that the extension of this privilege will help towards the improvement of Indian administration just at present, but it will surely create a very satisfactory effect on the confidence of the public in the projected scheme of reforms. The public will consider this grant as a sure guarantee for the future. But everything depends on education, and until Government produces a well educated and efficient electorate for the election of suitable members for these assemblies or Provincial Councils, there can be no hope of real improvement. At present the elections are confined to, or have been monopolized by, a few privileged people of the lawyer class, and are not of a really representative nature.

The following Papers are from Senior Members of the I.C.S.

No. 12

It appears of capital importance to obtain the clear recognition of the principle enunciated in para. 5 of your letter. It has been largely lost sight of in the administration of the last sixty years. Even now there will be many officials who will not assent to it. There will be many others who, while admitting it as a general proposition, will not admit it as a principle to be the one guiding their actions, or to be anything but something rather remote with which we have no particular concern just at present.

2. It is worth examining the history of official opinion on the question. Towards the end of the eighteenth century it appeared probable that we were to be the rulers of India, and the thoughts of officials constantly examined the difficulties of that position and the means by which we could make it successful. All the leading men at the end of the century saw the great danger and difficulty of our responsibilities. And all saw the importance of associating as far as possible the inhabitants of the country with our administration. To some, such as Malcolm, the safest course appeared to leave the Indian Governments as far as possible undisturbed in their several territories; others such as Munro were impressed with the importance of giving high official appointments in our own administration to natives of the country. The most clear and wise account of the problem, of our mistakes, and of the dangers in front of us, is given in Sir Thomas Munro's minute. 'On the state of the country and the condition of the people', dated December 31, 1824, and I suggest this be read in view of the present position. It is printed on page 124 of Gloig's life of Sir Thomas Munro, vol. ii.

3. This minute shows how far we were going in the direction of taking upon us the whole administration of this country, but his warnings and those of other distinguished men of the time did little to arrest the course that was being taken. The need and the fascination of restoring order out of chaos was as a rule too insistent for the political administrator to see the dangers ahead. And the policy of substituting wherever possible British for Indian agency found its culmination in the strenuous years of Dalhousie's administration, and was certainly one of the causes of the Mutiny. And the Mutiny in its turn perpetuated the policy of which it was really the outcome. We do not perhaps always appreciate the tremendous effect of the Mutiny on the minds of the Civil Administrators. The Civil Service was then a fairly close corporation and its members were interconnected with each other by various relationships. There was hardly a man who had not lost some woman relation, and the tragedies of the time completely clouded their judgement. Russell notes how bitter was the attitude of the Civil administrator compared with that of the military, so though many civilians were capable of seeing the mistakes of the policy that had lead to the outbreak, the prejudices aroused by the outbreak were so strong that there was no chance of the administration taking a more liberal turn. If this view of the matter is considered an exaggeration, let me quote the following passage from R

December 18th. We went to see the Junima Masjid which is held now by a battalion of Beloochees. I sincerely hope that the plan proposed by Mr. Phillip Egerton, the Magistrate of Delhi, may be carried out. He suggests that the Mosque be used henceforth as a Christian Church, and on each of the thousand compartments of the marble floor, the name of one of our Christian Martyrs be inscribed. It is the general opinion that it would be madness to restore this noble building to the Mohamadens.

2. It is worth examining the history of official opinion on the question. Towards the end of the eighteenth century it appeared probable that we were to be the rulers of India, and the thoughts of officials constantly examined the difficulties of that position and the means by which we could make it successful. All the leading men at the end of the century saw the great danger and difficulty of our responsibilities. And all saw the importance of associating as far as possible the inhabitants of the country with our administration. To some, such as Malcolm, the safest course appeared to leave the Indian Governments as far as possible undisturbed in their several territories; others such as Munro were impressed with the importance of giving high official appointments in our own administration to natives of the country. The most clear and wise account of the problem, of our mistakes, and of the dangers in front of us, is given in Sir Thomas Munro's minute. 'On the state of the country and the condition of the people', dated December 31, 1824, and I suggest this be read in view of the present position. It is printed on page 124 of Gleig's life of Sir Thomas Munro, vol. ii.

3. This minute shows how far we were going in the direction of taking upon us the whole administration of this country, but his warnings and those of other distinguished men of the time did little to arrest the course that was being taken. The need and the fascination of restoring order out of chaos was as a rule too insistent for the political administrator to see the dangers ahead. And the policy of substituting wherever possible British for Indian agency found its culmination in the strenuous years of Dalhousie's administration, and was certainly one of the causes of the Mutiny. And the Mutiny in its turn perpetuated the policy of which it was really the outcome. We do not perhaps always appreciate the tremendous effect of the Mutiny on the minds of the Civil Administrators. The Civil Service was then a fairly close corporation and its members were interconnected with each other by various relationships. There was hardly a man who had not lost some woman relation, and the tragedies of the time completely clouded their judgement. Russell notes how bitter was the attitude of the Civil administrator compared with that of the military, so though many civilians were capable of seeing the mistakes of the policy that had led to the outbreak, the prejudices aroused by the outbreak were so strong that there was no chance of the administration taking a more liberal turn. If this view of the matter is considered an exaggeration, let me quote the following passage from R

December 18th. We went to see the Junima Masjid which is held now by a battalion of Beloochees. I sincerely hope that the plan proposed by Mr. Phillip Egerton, the Magistrate of Delhi, may be carried out. He suggests that the Mosque be used henceforth as a Christian Church, and on each of the thousand compartments of the marble floor, the name of one of our Christian Martyrs be inscribed. It is the general opinion that it would be madness to restore this noble building to the Mohamaders.

Raikes was a civilian of experience and a great admirer of Sir Henry Lawrence and his disciples : recognized that the bulk of the people had not in any way joined in the outbreak, and when younger had feelings of affection to the people of India. In view of the above quotation it is not surprising that he ends his book by saying '*we should legislate and govern in India as a superior race*'. And though there were many men who attacked and criticized the policy of Government even after the Mutiny, we did in fact continue on the whole to govern without the co-operation of Indian opinion. Take for example the following passage from the *English in India*, by Captain E. Bell :

While the founders of our Indian Empire were maintaining and strengthening a precarious position, controlling and conciliating allies, and contending with powerful enemies, whom they could not but respect and admire in some degree, the English in India continued to place a high value on the good will and good opinion of the natives. While they were evoking peace and order out of a chaos of conflicting interests, they learned at every step to appreciate both the value of native tact in negotiation, and the powerful influence of our own reputation for honour and fair dealing. And as in all times of conquest, crisis, and real difficulty the work was done by a few heroes and statesmen, our most celebrated tasks of the pacification, settlement, and organization of large provinces were effected by one or two able and experienced English officers in each province, by means of some special native agency and the existing local authorities. These able and experienced men—first-rate or third-rate soldiers or administrators—never make themselves offensive to the natives, never despise the inhabitants of the country, or think lightly of their ancient rights, privileges, customs, or prejudices. In fact, they understood and respected them. Search the works, the official writings, and the official acts, of such men as Lord Metcalfe, Sir Thomas Munro, Frederick John Shore, Sir John Malcolm, Mountstuart Elphinstone, Sir Henry Russell, General Low, and Sir Robert Hamilton, for the proof of these allegations. But as our supremacy became every day more surely established and acknowledged, the immediate obvious necessity for reliance on native agency rapidly diminished, until the stream of home patronage, which grows with what it feeds upon, has at length filled the whole country with English gentlemen to be provided for, and with apparent functions to be performed. The mass of European idlers and non-entities in the civil and military services don't certainly add to the physical strength of England in India, while they detract from her moral strength, lower the native ideal standard of English ability and honour, and introduce an element of insolence, contempt, and tyranny, which is most dangerous to our power and derogatory to our national reputation. The same great vice pervades our entire system, and an unnatural and degrading rule of exclusion is manifest in all our establishments; appointments for Englishmen are multiplied, and young Englishmen without any peculiar qualifications are placed in minor positions, the duties of which could be fulfilled in a much more efficient manner by natives, with the great advantage of their improvement in knowledge, in self-respect, and in attachment to British interests.

4. The forty years after the Mutiny were years of construction and great material progress. The Indian administrator was

These able and experienced men first-rate or third-rate soldiers or administrators never make themselves offensive to the natives, never despise the inhabitants of the country, or think lightly of their ancient rights, privileges, customs, or prejudices. In fact, they understood and respected them. Search the works, the official writings, and the official acts, of such men as Lord Metcalfe, Sir Thomas Munro, Frederick John Shore, Sir John Malcolm, Mountstuart Elphinstone, Sir Henry Russell, General Low, and Sir Robert Hamilton, for the proof of these allegations. But as our supremacy became every day more surely established and acknowledged, the immediate obvious necessity for reliance on native agency rapidly diminished, until the stream of home patronage, which grows with what it feeds upon, has at length filled the whole country with English gentlemen to be provided for, and with apparent functions to be performed. The mass of European idlers and non-entities in the civil and military services don't certainly add to the physical strength of England in India, while they detract from her moral strength, lower the native ideal standard of English ability and honour, and introduce an element of insolence, contempt, and tyranny, which is most dangerous to our power and derogatory to our national reputation. The same great vice pervades our entire system, and an unnatural and degrading rule of exclusion is manifest in all our establishments; appointments for Englishmen are multiplied, and young Englishmen without any peculiar qualifications are placed in minor positions, the duties of which could be fulfilled in a much more efficient manner by natives, with the great advantage of their improvement in knowledge, in self-respect, and in attachment to British interests.

4. The forty years after the Mutiny were years of construction and great material progress. The Indian administrator was

continually impressed with the vast changes that had been effected by the restoration of order, by Railways, and Steamships. There were no qualms whatever about democracy or self-government. The views of the best administrators, who were, it must be remembered, beginning their services at the time of the Mutiny, may be shown in the work of one of the most distinguished of them, Sir John Strachey.

But let there be no hypocrisy about our intention to keep in the hands of our own people those executive posts—and there are not very many of them—on which, and on our political and military power, our actual hold of the country depends. Our Governors of provinces, the chief officers of the army, our district officers and their principal executive subordinates, must be Englishmen under all circumstances that we can now foresee, and in all departments of essential importance there must be selected Englishmen to maintain a standard of high efficiency.

Compare this with Sir Thomas Munro's :

There is one great question to which we should look in all our arrangements : what is to be their final results on the character of the people ? Is it to be raised or is it to be lowered ? Are we to be satisfied with merely securing our power and protecting the inhabitants, leaving them to sink gradually in character lower than at present, or are we to endeavour to raise their character and to render them worthy of filling higher situations in the management of their country, and of devising plans for its improvement ? It ought undoubtedly to be our aim to raise the minds of the natives, and to take care that whenever our connexion with India might cease, it did not appear that the only fruit of our dominion there had been to leave the people more abject and less able to govern themselves than when we found them. Many different plans may be suggested for the improvement of their character, but none of them can be successful, unless it be first laid down as a main principle of our policy, that the improvement must be made. This principle once established, we must trust to time and perseverance for realizing the object of it. We have had too little experience and are too little acquainted with the natives, to be able to determine without trial what means would be most likely to facilitate their improvement. Various measures might be suggested which might all probably be more or less useful, but no one appears to me so well calculated to ensure success, as that of endeavouring to give them a higher opinion of themselves, by placing more confidence in them, by employing them in important situations, and perhaps by rendering them eligible to *almost every office under the Government*. It is not necessary to define at present the exact limit to which their eligibility should be carried, but there seems to be no reason why they should be excluded from any office for which they were qualified without danger to the preservation of their own ascendancy.

Strachey, looking upon many years of wise and beneficent activity, saw the achievement. But we looking from a greater distance can now see another side of the picture. We are no longer confronted with the difficulties of keeping order or the establishment of the administration. The work has been done : we can see the fruits and we feel doubts as to their perfection. Our doubts may be put in the words of Hobhouse :

continually impressed with the vast changes that had been effected by the restoration of order, by Railways, and Steamships. There were no qualms whatever about democracy or self-government. The views of the best administrators, who were, it must be remembered, beginning their services at the time of the Mutiny, may be shown in the work of one of the most distinguished of them, Sir John Strachey.

But let there be no hypocrisy about our intention to keep in the hands of our own people those executive posts—and there are not very many of them—on which, and on our political and military power, our actual hold of the country depends. We have had too little experience and are too little acquainted with the natives, to be able to determine without trial what means would be most likely to facilitate their improvement. Various measures might be suggested which might all probably be more or less useful, but no one appears to me so well calculated to ensure success, as that of endeavouring to give them a higher opinion of themselves, by placing more confidence in them, by employing them in important situations, and perhaps by rendering them eligible to *almost every office under the Government*. It is not necessary to define at present the exact limit to which their eligibility should be carried, but there seems to be no reason why they should be excluded from any office for which they were qualified without danger to the preservation of their own ascendancy.

Strachey, looking upon many years of wise and beneficent activity, saw the achievement. But we looking from a greater distance can now see another side of the picture. We are no longer confronted with the difficulties of keeping order or the establishment of the administration. The work has been done : we can see the fruits and we feel doubts as to their perfection. Our doubts may be put in the words of Hobhouse :

What is spontaneous in a people, be it in the movement of an individual class, or a nation, is always the source of life, the well-spring of the fresh force which recruits jaded civilization. In proportion as the weight of government succeeds in crushing this spontaneity, in that proportion, alike whether its administration be conscientious or profligate, aimed at the happiness of the governed or their misery, it tends inevitably to arrest development and inaugurate a period of decay.

5. It appears to me, therefore, of the very first importance that those responsible to the administration should adopt a right policy. All schemes of reforms and progress will present very great difficulties. They will have a faint chance of success unless there is behind them the belief and the enthusiasm of the heads of the administration. Unless the whole government is really convinced that associating the inhabitant of the country with the government to the fullest possible extent is absolutely vital to our success in India, all measures of reform will be taken in a half-hearted and ineffective manner and *always too late*.

6. I entirely agree with you in your paras. 12 and following that provincial responsibility is very important. For one thing the government is too centralized and reforms that are possible and would be successful in some provinces would be a failure in others. We must try and go at different paces at different places.

7. I agree with your para. 24 that the official vote should be removed from the Legislative Council.

8. With regard to your para. 29, I am afraid I must confess that I have little confidence in any electorate that can at present be scraped together. And the electorate would be almost entirely controlled by the press and by a desire to oppose government, but I am not prepared to say that the risk of granting real power to the electorate should not now be undertaken. Whether your scheme is a practical one or not, is a matter that I cannot give an opinion upon without a great deal of detailed study. But hand in hand in any such scheme there must go in my opinion: (1) A clear realization by the Government of India of the great importance of doing everything to make the country fit for self-government. I have dwelt on this. (2) A large increase of Indians in public service. The method of doing this that will *ruin* the administration is simultaneous examinations for the civil service. We must recognize that our administration is formed for an alien race of officials; and we must alter it in many ways if power is to be given to the inhabitants of the country. This is a large subject, and I will not pursue it now. If the great importance of admitting the best Indians into our public service is once realized the out-of-date regulation that at present makes this impossible can soon be swept away. Let us reflect that though a hundred years are past since Munro's minute we have something under twelve natives of India in positions of real authority in the whole of British India. In addition to this we have a good many judges and a few district officers. But all important measures

What is spontaneous in a people, be it in the movement of an individual class, or a nation, is always the source of life, the well-spring of the fresh force which recruits jaded civilization. In proportion as the weight of government succeeds in crushing this spontaneity, in that proportion, alike whether its administration be conscientious or profligate, aimed at the happiness of the governed or their misery, it tends inevitably to arrest development and inaugurate a period of decay.

5. It appears to me, therefore, of the very first importance that those responsible to the administration should adopt a right policy. All schemes of reforms and progress will present very great difficulties. They will have a faint chance of success unless there is behind them the belief and the enthusiasm of the heads of the administration. Unless the whole government is really convinced that associating the inhabitant of the country with the government to the fullest possible extent is absolutely vital to our success in India, all measures of reform will be taken in a half-hearted and ineffective manner and *always too late*.

6. I entirely agree with you in your paras. 12 and following that provincial responsibility is very important. For one thing the government is too centralized and reforms that are possible and would be successful in some provinces would be a failure in others. We must try and go at different paces at different places.

7. I agree with your para. 24 that the official vote should be removed from the Legislative Council.

8. With regard to your para. 29, I am afraid I must confess that I have little confidence in any electorate that can at present be scraped together. And the electorate would be almost entirely controlled by the press and by a desire to oppose government, but I am not prepared to say that the risk of granting real power to the electorate should not now be undertaken. Whether your scheme is a practical one or not, is a matter that I cannot give an opinion upon without a great deal of detailed study. But hand in hand in any such scheme there must go in my opinion: (1) A clear realization by the Government of India of the great importance of doing everything to make the country fit for self-government. I have dwelt on this. (2) A large increase of Indians in public service. The method of doing this that will *ruin* the administration is simultaneous examinations for the civil service. We must recognize that our administration is formed for an alien race of officials; and we must alter it in many ways if power is to be given to the inhabitants of the country. This is a large subject, and I will not pursue it now. If the great importance of admitting the best Indians into our public service is once realized the out-of-date regulation that at present makes this impossible can soon be swept away. Let us reflect that though a hundred years are past since Munro's minute we have something under twelve natives of India in positions of real authority in the whole of British India. In addition to this we have a good many judges and a few district officers. But all important measures

are taken and carried out by us and by us alone, e.g. the Indian section of the Indian Defence Force. On this subject, Sir Syed Ahmed's note on the causes of the Indian mutiny and his insistence on the importance of our measures coming to the people backed by the authority of some Indian official is worth reading. (3) The third matter of first-rate importance seems to me the complete change in our attitude towards higher education. It is obviously the vital matter of the whole business. If for instance you handed over education to the present electorate, its education is so very bad that it would make matters very much worse than they are at present. In educational matters we have been misled by the European analogy. We have said it is the business of government to look after primary education: the people must make arrangement for higher education as they do in other countries. The Resolution of 1913 on Indian Educational Policy runs as follows:

This policy is dictated not by any belief in the inherent superiority of private over State management, but by preference for an established system and above all, by the necessity of concentrating the direct energies of the State and the bulk of its available resources upon the improvement and expansion of elementary education. The policy may be summarized as the encouragement of privately managed schools under suitable bodies, maintained in efficiency by Government inspection, recognition and control, and by the aid of Government funds.

In view of the condition of the country this was an unwise position. Primary education is relatively unimportant, but we must have the best higher education, the other will follow. In this country everything has always been done by the government, and it is no good telling the people, poorly educated as they are and unaccustomed to administrate anything, that if they want higher education they must arrange for it. That is what government did in Bengal, with the most fatal results. We have got to consider the history of this country: we have introduced into it western progress, railways, and newspapers; but we have not, as we had in Europe, a well-educated class and number of educational institutions richly endowed. That being the case we have got to supply what is a vital part of the well-being of the country. Japan has taken a complete government control of secondary education and spends twice as much as the Government of India. In India at present there are not enough of English schools, and they are nothing like good enough; the universities are of the lowest possible standard. The teachers in the high schools are not of the class we require, and we must pay them far more. The system and curriculum is, I am told by all thinking men, extremely bad. It is for this reason that political progress is so extremely difficult. Public opinion is at present dominated by 'the press', and it is almost impossible to reason with the leaders of the people.

9. Here again we have to effect a complete change in the official mind. A large number of officials regard education as a nuisance

are taken and carried out by us and by us alone, e.g. the Indian section of the Indian Defence Force. On this subject, Sir Syed Ahmed's note on the causes of the Indian mutiny and his insistence on the importance of our measures coming to the people backed by the authority of some Indian official is worth reading. (3) The third matter of first-rate importance seems to me the complete change in our attitude towards higher education. It is obviously the vital matter of the whole business. If for instance you handed over education to the present electorate, its education is so very bad that it would make matters very much worse than they are at present. In educational matters we have been misled by the European analogy. We have said it is the business of government to look after primary education: the people must make arrangement for higher education as they do in other countries. The Resolution of 1913 on Indian Educational Policy runs as follows:

This policy is dictated not by any belief in the inherent superiority of private over State management, but by preference for an established system and above all, by the necessity of concentrating the direct energies of the State and the bulk of its available resources upon the improvement and expansion of elementary education. The policy may be summarized as the encouragement of privately managed schools under suitable bodies, maintained in efficiency by Government inspection, recognition and control, and by the aid of Government funds.

In view of the condition of the country this was an unwise position. Primary education is relatively unimportant, but we must have the best higher education, the other will follow. In this country everything has always been done by the government, and it is no good telling the people, poorly educated as they are and unaccustomed to administrate anything, that if they want higher education they must arrange for it. That is what government did in Bengal, with the most fatal results. We have got to consider the history of this country: we have introduced into it western progress, railways, and newspapers; but we have not, as we had in Europe, a well-educated class and number of educational institutions richly endowed. That being the case we have got to supply what is a vital part of the well-being of the country. Japan has taken a complete government control of secondary education and spends twice as much as the Government of India. In India at present there are not enough of English schools, and they are nothing like good enough; the universities are of the lowest possible standard. The teachers in the high schools are not of the class we require, and we must pay them far more. The system and curriculum is, I am told by all thinking men, extremely bad. It is for this reason that political progress is so extremely difficult. Public opinion is at present dominated by 'the press', and it is almost impossible to reason with the leaders of the people.

9. Here again we have to effect a complete change in the official mind. A large number of officials regard education as a nuisance

and the educated Indian as a man who is certain to be their opponent. I believe with proper education the contrary would be the case, but I cannot get anybody to agree with me. It is very interesting to remember that at the time of the mutiny the English educated people stood by us. The reason was that the masters of the schools were Englishmen, with enthusiasm and high character, many of them missionaries, and the boy left school with a real admiration for England and for the English language. A contemporary account says :

The boy who had been instructed in the morality of the Gospel, and had tasted the literature of the West, grew up as a man into the admirer and often the partisan of the English. . . . The students of Agra, Farrukhabad, Benares, Delhi, or Bareilly, who had been instructed either at the government or mission colleges, behaved in a much bolder manner, and often at the risk of their own lives openly declared their adherence to the British cause.

It is further to be remarked that it is education in and by the English language, and that alone, which has seemed to chain the students to our fortunes. Some of our bitterest enemies were the native doctors and surgeons who had studied European Science in the Vernacular all their lives.

10. Even now it is surprising to find how much affection for England and English language is to be found in many of the educated classes, and pride in the Empire by means of the English language is capable of being a great asset in future.

11. I must apologize at having written at such length and yet given so little of detailed criticisms of your main scheme. My excuse is that the changes that I try to advocate seem to be essential if any projects towards self-government are to be a success.

No. 13

I agree to the declaration of self-government as the ultimate objective of British Policy in India- (your para. 8). Indian patriotism and loyalty to the Empire have, as Bipin Chandra Pal says, to be reconciled and nationalist ideals to be co-ordinated with the Imperial connexion.

2. Also I think it very desirable that the solid official vote should be abolished, and the non-official members be at liberty to pass resolutions which are only recommendations to Government, and even to frame legislation subject to the operation of the veto—your para. 24. No legislation, however, should be initiated without the permission of the Governor or Lieutenant-Governor-in-Council.

3. As to substituting direct voting by all qualified persons (your para. 29) for the present system, whereby members of District Boards and Municipalities elect delegates to vote—I am doubtful. The existing system was, I presume, intended to widen the basis of representation by extending it to small landholders and shopkeepers

The first part of the paper discusses the theoretical background of the study. It starts with a brief overview of the concept of 'social capital' and its relevance to the study of social networks. The second part of the paper describes the research methodology, including the data collection and analysis techniques. The third part of the paper presents the results of the study, and the fourth part discusses the implications of the findings for future research and practice.

who, though not qualified to form a judgement on provincial problems, are qualified to choose persons who will conduct their local concerns and will elect for the Provincial council such members as will look after the interests of these small landholders and shopkeepers. Another object of the system was no doubt to add to the importance of a seat on the District or Municipal Board. On the whole I think these considerations outweigh the objections pointed out in paras. 28 to 30.

4. I now come to the definite scheme of parliamentary Government in certain departments of administration. My first and fundamental objection is that Upper India at any rate is not ripe even for representative far less for responsible government.

5. The standard of integrity and education and industrial progress in rural India is wofully low. In my district of over one million people only one graduate lives outside the head-quarters town, and in this area there is not a single power machine used for any purpose whatever. The zemindars are all men of the old style at feud with, and constantly intriguing against, their neighbours; realizing from their estates what they can by raising rents and letting out fallow lands, but spending nothing on their improvement; knowing nothing of and caring nothing for the industrial or even the agricultural development of the country, and wholly uninterested in the welfare of their tenantry. As there is no public opinion there is no restraint on their morals, and it has been a frequent disappointment to find men of good reputation when entrusted with the control of co-operative societies making use of them for their own advantage. They regard election to the District Board as bringing them honour among their fellows, but are with few exceptions incapable of giving reasoned opinions in matters of policy and are only interested in purely local matters or in those into which personal or sectarian considerations enter. For example, the first thing a European planter does when he acquires an estate is to improve its communications, and the remains of roads made by indigo planters of old at their own charges are still to be found in the district. But the Indian zemindar never thinks of anything of the kind, and though it is known to be the policy of the District Board to improve communications, and in pursuance of this policy some 150 miles of new roads have been laid out during the last three years, no suggestions have been received from the public regarding the alinement of these roads or the laying out of others. Similarly a place where there are several factories, to which large stocks of fuel and raw material have to be conveyed, is served by a really vile road which there has been no organized effort to get improved.

6. In my opinion zemindars are not qualified to form the foundation on which an edifice of representative government should be raised; and this remark applies of course with added force to the less important classes of the rural community. And it also applies in the main to the shopkeepers, traders, and artisans of the towns.

Until education and public spirit are much further advanced, there is no public opinion save that which is manufactured by the professional politicians to suit their own ends, and there can be no true representation. With an apathetic and uneducated electorate it is always the most advanced politician who becomes elected, for it is he who is the keenest and takes the most trouble to get votes. And this is especially the case with communal representation, which has unfortunately been introduced into this country. The man who is elected as the Mohammedan representative is he who maintains most loudly that he has in the past fought for the rights of Mohammedans against Hindus and against Government, and protests most strongly that he will do so in future. The Muslim League is at present disapproved of by the vast majority of Mohammedans of good status, but it continues to masquerade as representing the Mohammedans of India because the latter have not sufficient moral courage to get up and denounce it.

7. So much for the electorate. As for the members of the assembly there are no men of leisure and culture available except a few retired officers. In the assembly there would be very few country gentlemen and men of business, 'two classes of humanity who are constantly in touch with and drawing strength from our mother earth of hard fact' (*Ordeal by Battle*)—all would be left to the lawyer, the journalist, and the professional politician.

8. For the above reasons I consider that this province at least is not fit for representative Government at present, and when we come to responsible Government and the paraphernalia of party government the venue seems still more unsuited. Elections are fought on personal rather than on political grounds at present, and this will continue to be the case so long as only one class of the community is represented, as I have shown will be the case in your provincial Parliament.

9. Turning now to details of the scheme, I see the following objections to the attempt to administer the departments scheduled in class 1 by a system of responsible Government:

(1) These are highly technical departments which provide at present little scope for criticism, and would provide little scope for original thought and work to the minister put in charge of them. The departments that come in for most criticism are: Education, which is in the third class, and Excise; Assessment and collection of Land Revenue, Civil and Criminal Justice and Police, all of which come under the fourth class to be handed over only when autonomy is complete; also Finance, the allocation of expenditure to different heads of the Budget, which is perhaps as important as any. The making over of the minor scientific departments of Government would be regarded in my opinion as a mockery and would arouse little enthusiasm even as a means to an end, and if it were actually done would be of little value as an index to the success of a real experiment in responsible Government. Has any ministry in any

Has any ministry in any

country ever gone out of office on a non-essential question such as agriculture or public works ?

(2) Dyarchy as explained in the letter presents no difficulties so long as the two governments concerned are controlled by the same class of men. We have it already not only in the Imperial Departments, Post Office, Salt, &c., working side by side with Provincial Departments such as Excise and Agriculture, but also in Provincial Departments such as Irrigation and Prisons working side by side with Land Revenue or Criminal Justice which are controlled by the District Officer. It is not correct to say (as in your para. 18) that the Commissioner and Collector supervise and report on forests and irrigation and so represent the Government of India in the Provinces. They are, it is true, generally consulted as regards forest and irrigation questions in the same way as they are consulted in nearly all cases of proposed legislation, and the reason is that they are in closer touch with the people than other officials and have through their subordinates and non-official friends better means of ascertaining public opinion. It is true that they control the police in the same way as the chief constable of a county does in England, and primary education in the same way as the county council does at home; but this only means that they combine in their own person several local offices which might under another system be filled by several officers. The present system works with little friction. If, however, as under the proposed scheme, the policy of certain departments is controlled by men who look on a subject such as education from a purely political point of view, or a subject such as indentured emigration or assessment of land revenue or the coinage of a special gold coin for India¹ from a purely sentimental point of view, there is bound to be constant friction with officials taught to look on public questions from a practical and economic standpoint. I look to the gradually increasing number of Indian officials in high places imbued with British standards and methods of work to gradually lessen non-official opinion in these matters, and I think we must wait for any scheme of this sort till the number of Indian high officials is largely increased.

(3) I do not understand how under the proposed scheme the responsibility for raising funds by taxation can be shared between the Finance minister who controls the grants to scientific departments and the Government Financial Secretary who controls all receipts and the expenditure on the main departments of Government. The real responsibility must rest on the latter, and this negatives the adoption of the principle, on which you lay stress, that a really responsible Government can afford to impose taxes which a despotic Government cannot. Besides, there is no indication that a national Government in India would find new sources of

¹ On all these four questions there was a unanimous vote against the Government by all Indians whether elected or nominated either on the Imperial or Local Legislative Councils.

taxation. None such, so far as I can remember, has ever been suggested in the nationalist Press unless it be the further taxation of imports. On the contrary there is a constant pressure to reduce the rates and objects of internal taxation.

10. This criticism has so far been wholly destructive and I will now shortly indicate the paths by which I think we ought to travel towards the objective to which I agree--the government of India by the Indians.

11. In the first place I consider it essential to any real advance as stated in (2) above that a far larger proportion of high places in the government be held by Indians. I hold that the recommendations of the Public Services Commission are quite inadequate in this respect. In particular the claims of the Provincial Executive service to a fair proportion of Collectorships should be allowed and the Police service should not be kept as a close preserve for Europeans. Also the present system of nomination for Deputy Collectorships and similar posts should be either abolished in favour of competition or very largely modified.

12. Secondly I consider that the laudable desire of nationalist politicians and others to take their share in the administration of the country can be met to a very considerable extent by the extension of the number of departmental Boards and the enlargement of their functions. We already have a Board of Industries and a Sanitary Board which have considerable executive powers. There is also a sub-committee on the Budget and a Board of Education having very small powers which are capable of expansion. Boards of Agriculture and Excise should certainly be formed and the system should be gradually extended to other departments of Government. The members of such Boards might be partly elected by the legislative council from among themselves and partly nominated by the Government from officials and non-officials outside the council. Their functions would at first be mainly advisory, but as time goes on and experience is gained they might be given larger and larger executive powers. They would in my opinion form the most effective agency for bridging over the long interval which must elapse till the wider extension of education provides a more representative electorate, and the Indianization of the higher grades of the public service provides suitable machinery for administering government by the Indians themselves.

13. Your last para. Personally I see no objection to the affairs of India being controlled by an Imperial Parliament on which India and the Dominions are represented, provided the objections so strongly voiced by Indian nationalists can be overcome. On the other hand the proposed development is not only theoretically preferable to the present system but should in practice prove most beneficial to India.

No. 14

Your letter is the first serious attempt I have seen to suggest a means by which the elective principle can be introduced without revolutionizing the entire system of Government. For this reason I am much more disposed to admire than to criticize--the more so as I have myself sought in vain for a solution. I entirely agree in your thesis that we must commence with the Provincial Governments and not with the Government of India. I can only attempt to indicate one or two points that seem to me most open to objection.

The first is the exclusion of the official vote (pp. 7 and 8). If this is confined to meetings devoted exclusively to discussion of the transferred heads, I have no quarrel with it. In that case I would exclude officials from speaking also. They would be consulted in other ways. But if you propose to exclude them altogether I see two very serious objections, one affecting the officials themselves and the other the effect on legislation.

(1) In a legislative assembly the position of an officer who can speak but not vote--unless indeed he is an officer of outstanding rank and authority and intervenes only on special occasions--is an unpleasant and undignified one. He will be regarded as an intruder and his words will be listened to with impatience. The position is one which has been avoided in the British constitution and usually in the Dominions also.

(2) Their exclusion would deprive the Provincial Government of all power of legislating on reserved topics. It could not be certain of carrying any Government measure whatever.

I quite agree that the spectacle of official members invariably voting together and on one side like a machine, and the bulk of the non-official members invariably voting together on the other is unedifying, and tends to promote racial distinctions and to emphasize the attitude of opposition which is natural to the non-official members. The remedy, it seems to me, is to restore to the official members the right they once enjoyed of voting according to their convictions except on questions which the Government regards as vital. As recently as 1911 an official member voted against the Government on an important detail of a Government measure.

Whether we are yet ready for the trial of your scheme throughout India is a point upon which I am perhaps too near the fray to pronounce. You would hardly, for instance, advocate introducing it into the Frontier Province. Some forward step seems to have been virtually promised after the war, and the only alternative to your scheme that I can think of for these provinces is an executive council with an Indian non-official member (probably the council would consist of two members). The suggestion of making the Indian membership elective naturally occurs to one, but I fear the difficulties in the way of having an elected member of an official Government would be insuperable. He would be trying to serve two masters, and naturally his allegiance would be to the electors rather than to his colleagues.

I have read your memorandum, dated April 6, with much interest. As I think you know, there is a great deal in your views with which I am in agreement. The impossibility of making any real progress on existing lines is apparent, and the necessity of continuing the effort to make progress is equally clear. As far as I am in a position to judge, the line which you contemplate of separation of the functions of Government into certain groups is the only practicable solution of the difficulty. To hand over the whole machine to a responsible Government, as the fanatics of Home Rule desire, would result in a catastrophe. A mere increase in the strength of the elective element without the grant of any corresponding increase in real power would satisfy no one, and the only alternative to complete immobility seems to be to separate those functions which might be made over to a responsible Government from those which must still be retained in the hands of the Central Power. For the present, in this province the most obvious direction in which responsibility to popular control could be conceded is in the direction of those branches of Government which have already been transferred to local bodies but in regard to which far too much centralized control has hitherto been maintained. Some movement is already being made in this direction, and it would hardly be suitable for me to go into detailed discussion of the possible extensions of the principle. I can only say that I am generally in favour of the idea underlying your proposals. As to the exact date at which such a change could be introduced it is unnecessary to speculate.

No. 16

I have read these papers very hurriedly and will only jot down a few rough notes on the suggested system of dyarchy for Provincial Government.

I think it is quite unsuitable to Indian conditions, because

(a) It conflicts with all Indian traditions and ideas of Government—as centred in a single body or individual—and would be unintelligible to the Indian mind.

(b) It also conflicts with the axiomatic principle that the advance towards Self-government in India must be in accordance with India's special circumstances and traditions.

(c) It seems to me to be a rash and dangerous experiment which would subordinate the end for which Government exists to the theory of a possible means for altering the form of that Government.

(d) I do not think it would conciliate Indian Political opinion, which does not demand an alteration in the form of Government which is accepted and understood by all classes; but does demand that Indians should have more voice in determining the policy of Government, and be more closely associated with the system by which that policy is given effect to.

(e) The selection of the Head of the Ministry that would control the transferred branches of administration and of his colleagues would be a task of enormous difficulty, and would lead to faction and intrigue and jealousy in existing conditions. Those departments would suffer from lack of public confidence and of the prestige attaching to the reserved departments which have stable Government behind them.

(f) The possibilities of friction between the Heads and the personnel of the two sets of Departments would be enormous, and would tend to hamper and discredit the administration generally.

(g) The experiment of testing Indian fitness for Self-government can be and is being tried with less risk and without most of the drawbacks referred to above in other fields, e. g. local self Government where it is already amenable to and in the long run controlled by public opinion. Better develop on those lines than risk serious failure by venturing on unknown fields.

(h) Only those in close contact with the various classes and masses who know little and care less about Constitutional reforms can realize the enormous volume of opinion that looks with suspicion on the changes advocated by the supporters of Self-government and Home Rule.

No. 17

I did not intend to write any criticisms on Studies I and II, because we had already discussed together the principles. But I feel that I must try to give something in return for your letter.

2. I have scribbled in Study I some remarks on portions which seem to me susceptible of improvement. I dare say that some of your other correspondents have done this much better than I can. I felt some difficulty in dealing with the latter portion, which is a description of the provincial system of administration of the United Provinces. Any general description is bound to contain mis-statements when applied to a particular province, and any description of the system of a particular province is bound to be misleading when applied to India as a whole. I suggest that a better solution of this difficulty of painting a picture of the Indian system of administration as a whole would be to take a particular provincial system as you have done but also to add explanations where that particular system departs considerably from the systems in force in other provinces. To give an instance from a subject with which you are primarily concerned, the description of the district board branch of local self-government in the United Provinces gives a wholly incorrect impression of the system in force in more advanced provinces, certainly of the Central Provinces where there is a regular electorate, a non-official chairman, and considerable freedom from the influence of the Collector.

3. As regards Study II, I am so wholly out of sympathy with the line of advance there outlined that I do not feel able usefully

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in financial matters. The text outlines various methods for organizing and storing data, including digital databases and physical filing systems. It also mentions the need for regular audits and reviews to ensure the integrity of the information.

2. The second part of the document focuses on the role of communication in achieving organizational goals. It highlights the importance of clear and concise communication, both internally and externally. The text provides guidelines for effective communication, such as using appropriate language, listening actively, and providing feedback. It also discusses the importance of maintaining open lines of communication and fostering a collaborative environment.

3. The third part of the document addresses the issue of risk management. It defines risk as the potential for loss or damage and discusses various strategies for identifying, assessing, and mitigating risks. The text emphasizes the importance of proactive risk management and the need for a risk management framework. It also mentions the importance of documentation and reporting in risk management.

4. The fourth part of the document discusses the importance of continuous improvement. It highlights the need for organizations to regularly evaluate their performance and identify areas for improvement. The text provides guidelines for implementing a continuous improvement process, such as setting goals, measuring performance, and implementing changes. It also mentions the importance of employee involvement and training in continuous improvement.

CONCLUSION

In conclusion, the document emphasizes the importance of maintaining accurate records, effective communication, proactive risk management, and continuous improvement. These four key areas are essential for the success of any organization. By following the guidelines provided in this document, organizations can ensure that they are operating in a transparent, accountable, and efficient manner. The document also highlights the importance of employee involvement and training in achieving these goals. Finally, the document concludes by stating that continuous improvement is an ongoing process that requires regular evaluation and adjustment.

to make detailed criticisms, but I give for what they are worth the following comments on the main principles. The position has changed materially since you wrote. The decision of the Imperial War Cabinet has settled at least for several years the proposal for an Imperial Parliament and India's representation thereon; and similarly Montagu's announcement has defined the goal of Indian policy. I therefore turn to your scheme for transferring to popular control certain selected functions of government in selected provinces.

4. You recognize that this involves two separate governments in the same area, but do not consider this to be an important objection. You appeal to the dual system in force in some of our colonies and in other countries, but this analogy seems to me false. In these cases the two governments are based on the same principle, so that there is no surrender of main principle in a provincial government being overruled by a national government. In India it involves a popular government being subject to our bureaucratic government, which would in my opinion be bound to fail. There is a further distinction. Whilst control by a central government over a provincial government is reasonable, particularly if both are based on the same fundamental principle, your proposal involves two independent governments for the same province, exercising authority side by side in the same area. Is there any parallel for such a system? I cannot believe that it would work in India. Conflict is certain to occur in the two functions assigned to the Legislative Council (paragraph 33). Take the instance of Mrs. Besant's internment or even a stronger case in which the bureaucratic government comes into direct conflict with the popular government over a question of policy within the sphere of the former; the popular government would resign or adopt passive resistance, thus bringing the framework of government to a deadlock. It offends against the constitutional maxim that the King's government must be carried on.

5. Whilst fully admitting the principle of separate local taxation for local affairs, I cannot contemplate two independent governments in the same province both with general powers of taxation. Surely general taxation is an indivisible function of government which must be exercised by one authority with due regard to the taxable capacity of the tax-payer. Take a practical illustration from your transferred function of Public Works. The popular government wishes to provide increased funds for communications, and the obvious method is to raise the Road Cess; but this cannot be done without encroaching on future land revenue, for the total taxation on the land must be regulated by the total payments on account of land revenue plus cesses. A similar objection applies to an increase of income tax, or to a light tax on rail-borne traffic which would prejudice imperial railway receipts. My practical experience has confronted me with this difficulty in attempting to find a solution for the inadequate funds of local bodies even under the present

A similar objection applies to an increase of income tax, or to a light tax on rail-borne traffic which would prejudice imperial railway receipts. My practical experience has confronted me with this difficulty in attempting to find a solution for the inadequate funds of local bodies even under the present

system, and it would be much intensified under a scheme of dual governments.

6. Dyarchy seems to me contrary to the teachings of Indian history and to the sentiment of the country, which has always demanded a single governing authority with full powers in all the functions of government. I do not believe that it would have even the advantage of being acceptable to advanced Indian political thought, but would be an unpalatable solution with no corresponding advantage. I cannot agree that it is a safe experiment from which it would be possible to withdraw if it failed (paragraphs 34 and 44 to 53). I shudder to think of an indictment of a provincial popular government by the government of India before an Imperial Parliament, and still more of an indictment by the provincial bureaucratic government of the popular government with the central government of India as the sole judge. It destroys the whole basis of popular government, which postulates a responsible electorate to control popular government.

7. Finally, my experience as an administrator condemns the scheme as alien to the present structure of the administration. Due to historical reasons which it is unnecessary to specify, the functions of government are interwoven in a complete fabric and not separate garments capable of division. There are no vertical lines along which the fabric can be divided. The district staff are the main threads running throughout the whole. No official can satisfactorily serve two masters whose instructions will be conflicting, without neglecting the interests of one. There might be some possibility of success with two entirely separate staffs each responsible to its own government, which is surely the case in the parallels mentioned by you; but none for a single staff responsible to two governments, which must be the case until Indian sentiment changes and until India can afford the more expensive duplicate establishments. Without the active support of the district officer, the progress of the departments of agriculture and co-operative credit would be seriously handicapped. How is it possible to divorce the management of forests, so intimately connected with the well-being of the people, from the general administration? Again, the recruitment of the central staff of the popular government from the services will cause many difficulties in the selection by the bureaucratic government from a reservoir controlled by it, difficulties between the two governments and difficulties over the posting of the officers, their transfer, their promotions, and the like. Again, conflicts of policy are bound to occur between the two governments, for no function of government can be entirely separated from other functions. I again illustrate from Public Works. Who is to decide the allocation of funds? The bureaucratic government demands police buildings as essential to improved police administration; the popular government prefers to spend the available funds on school buildings. If each government is to provide its own funds

system, and it would be much intensified under a scheme of dual governments.

Who is to decide the allocation of funds? The bureaucratic government demands police buildings as essential to improved police administration; the popular government prefers to spend the available funds on school buildings. If each government is to provide its own funds

for its own building needs, that still leaves to popular government the control of the employment of the permanent staff. The bureaucratic government wants a new road to a new industrial factory ; the popular government prefers a new road to a local market. I foresee endless difficulties in practical working in any department of government.

8. Such is my criticism of the principles of your proposal for devolution. Its value you will be able to judge, but you may also fairly complain that it is wholly destructive and that a better solution must be found before your proposal is thrown out. I should like to see a scheme of reforms which included proposals for delegating increased powers to provincial legislative councils and possibly to the Imperial legislative councils. I feel that it should not be beyond the wit of constitutional experts to frame a scheme of advance along the road of horizontal lines of increasing popular control over all the functions of government instead of vertical lines separating particular functions, and without reaching a chasm that must be crossed at one bound. In all this process of constitution-making for India, I have felt all along that it is being undertaken in India, equally by officials and Indian politicians who are amateurs at their trade. It should be the work of experts with a deep knowledge of constitutional history and practical experience of the working of constitutions, who know the lines of advance followed in other countries, how they work in practice and what pitfalls should be avoided. The part of the Indian official and politician seems to me more properly to weigh schemes framed by such experts and to judge what alterations are required to adapt them to Indian conditions. It is from this standpoint that I have endeavoured to examine your proposal as an official with some experience of Indian methods of administration but with no knowledge of constitutions. That experience induces me to regard more favourably advance on the lines advocated by Stanley Reed in the *Times of India* by decentralization all along the line, with more popular control at each stage, to local self-government bodies to a large degree, to provincial governments to a substantial degree, and to the Government of India by the Secretary of State and Parliament to a lesser degree. This connotes much devolution of financial responsibility. Cannot experts work out for India a scheme on these lines, which should be subjected to the criticisms of those with a knowledge of Indian conditions ?

9. Another important point occurs to me. Have you considered the possibility of a Second Chamber in the Indian constitution ; probably at first with the Imperial Legislative Council only, but possibly with an extension later on to provincial councils ? It has certain obvious advantages—the representation of the aristocracy, great landlords' interests, the important commercial interests, which I am convinced will not under present conditions obtain adequate representation even under an extended direct electorate system as

the book is a collection of essays, some of which are written by the author, and some by other scholars. The book is divided into two main parts: the first part contains essays on the history of the book, and the second part contains essays on the book's impact on the world.

The first part of the book is a history of the book, and it is written by the author. It is a very interesting and informative book, and it is a must-read for anyone who is interested in the history of the book. The second part of the book is a collection of essays on the book's impact on the world, and it is written by other scholars.

The essays in the second part of the book are very interesting and informative, and they provide a good overview of the book's impact on the world. The book is a very good introduction to the history of the book, and it is a must-read for anyone who is interested in the history of the book. The book is a very good introduction to the history of the book, and it is a must-read for anyone who is interested in the history of the book.

The book is a very good introduction to the history of the book, and it is a must-read for anyone who is interested in the history of the book. The book is a very good introduction to the history of the book, and it is a must-read for anyone who is interested in the history of the book. recommended by you and which I heartily support ; the assistance that it would give to government in working the veto safeguard. I feel some of the difficulties, but I believe that experts could embody this proposal in a good workable scheme. It might contribute towards a solution of the problem of Native States under constitutional government.

10. One more suggestion and I have finished. A scheme has been framed by the famous ' nineteen '. Could you not subject this scheme to the critical examination of your expert knowledge of constitutions, and submit the result to the tests of your Round Table method in India ? I believe that valuable results would accrue if this could be done in time for Montagu's deliberations in India.

11. So much for the efforts of an amateur, who is deeply interested in the problem the right solution of which means everything to the future of India and towards which end you are devoting your energies.

No. 18

My comments are based on experience drawn from Southern India. How far they may be applicable to other provinces I will not venture to say. In India generalizations are always dangerous. Time does not permit me to arrange my ideas systematically or to work them out to their logical conclusions. I have, therefore, had to content myself with noting down a few criticisms which have occurred to me on a perusal of the letter to Mr. Bhupendra Nath Basu. They are arranged according to the paragraphing of that letter.

2. *Paragraph 17.*—Somewhat over-states the case with regard to the interference of the Central Government in matters provincial. It is true that a Local Government has recurring occasion to complain of such interference ; but in practice Local Governments do enjoy a large measure of independence, and intervention from above in matters of detail is rare except in the case of financial codes, the vigour of which is, however, being gradually relaxed.

3. *Paragraph 18.*—Exaggerates the administrative functions of the I.C.S. so far as the Madras Presidency is concerned. The place of Commissioners is taken by a Board of Revenue with a portfolio distribution, each member having territorial jurisdiction over the whole province with regard to subjects falling within his portfolio ; the Board has no concern with local boards or municipal councils, sanitation, education, registration, or civil justice, and but little concern with the magistracy. The Collector and District Magistrate can hardly be said to ' supervise and report upon the schools, the police, the forests, the irrigation department, the Public Works Department, and so on '. It is true that he comes in close contact with those departments of the administration ; but the tendency is to divorce him from supervisory functions, and he occupies

The Collector and District Magistrate can hardly be said to ' supervise and report upon the schools, the police, the forests, the irrigation department, the Public Works Department, and so on '. It is true that he comes in close contact with those departments of the administration ; but the tendency is to divorce him from supervisory functions, and he occupies

no position in the official hierarchy of the departments of education, police, forests, irrigation, public works, registration, and civil justice, except in so far as he may in the capacity of a local board president be connected with local board schools, as district magistrate exercise specified powers over the police of his district, or as collector possess a measure of control, defined by the Forest Code, over the District Forest Officer. His functions are primarily revenue and magisterial; as an agency of local self-government he is being gradually replaced by unofficial local board presidents. The continuance of the I.C.S. in Southern India would therefore not be necessarily inconsistent with a system based on 'vertical lines dividing the functions of provincial departments from each other'. And I take it that any such system must provide for direct touch between the subordinate officers of different departments, otherwise the administration would inevitably be gravely hampered.

4. *Paragraphs 24 to 27.*—I am quite ready to abolish the official vote in local legislative councils, having had many years' personal experience of the practical inconvenience of the present arrangement. It should not be forgotten, however, that even now the statutory rules on the subject require that every resolution shall be 'in the form of a specific recommendation addressed to the Local Government', which is thus in a position to accept or reject such recommendations and need not be seriously exercised by the prospect of a particular resolution being carried against its wishes. As a matter of fact this sane view of the position has not prevented anxiety about being outvoted, which I have always thought matter for regret, especially when the anxiety was allowed to become apparent. It is always open to a Government at the next meeting of its Legislative Council to make a brief and dignified announcement of the reasons which render it impossible to accept a recommendation embodied in a resolution carried in council.

5. *Paragraphs 29 to 31.* At the present stage of educational development in Southern India I have grave doubts as to the feasibility of any general list of primary voters and the system of direct popular election. The risk of Brahman preponderance has always to be reckoned with, unless the educational qualification be lowered to a level which admits voters who certainly could not reasonably be considered 'qualified to form a judgement and record an opinion on Provincial affairs'. To secure the adequate representation of different interests special constituencies, e.g. Mohammadans, zemindars, will, I should say, be necessary for a long time to come. But I would raise no objection to one constituency, or one constituency for each district or group of districts, being composed of primary voters drawn from a much wider sphere than (as at present) the personnel of municipal councils and local boards. The larger the constituency the less the opening for personal canvassing and corrupt practices, accessories to the elective system which now do a great deal to keep away really representative candidates and

account partly for the fact that nomination is more highly valued than election. The framing of such a list of primary voters would be a difficult matter, requiring much careful thought. There is a mass of official literature on the subject of electoral franchises in Southern India, and (though I may be mistaken here) my impression is that the last venture, i.e. the creation of electorates to choose members of taluk (or sub-district) boards, has not been an unqualified success; in that case the franchise was intentionally put at a low level, but even so the electorates were often far too small. The truth is that the number qualified—on any reasonable standard—to vote is, and must long remain, small. But little interest is taken in elections unless some personal dispute or faction is in issue. It is often said that this lack of interest is due to the small amount of power vesting in local bodies, and one is told that real interest would grow up if more power were conferred on them. The criticism is more true of local boards than of municipal councils, which already have considerable powers to manage their own affairs. There is, I think, some force in it, and I should like personally to try some experiment like the following in order to ascertain whether as a fact a substantial increase in power *and responsibility* would evoke real interest on the part of the electorate. The experiment must be confined to a limited area and to local self-government. The revenue district is too large an area; the affairs of a self-governing district board would tend to become concentrated in the hands of the lawyer clique at head-quarters. I would begin, therefore, with the taluk (or sub-district) board, which has local jurisdiction, as a rule, over two revenue taluks—sometimes less, sometimes more. I would free this body from control by the District Board, which would be abolished, and give it charge of all local fund matters within its limits except only trunk roads (and of course railways, if any rest nominally under local board control); such roads are of more than local interest and should be maintained, for the present at least, by the provincial authorities. At the same time I would give the taluk board limited powers of taxation and encourage their use by the promise of provincial subsidies in a definite ratio to the amount of additional tax collected. It is in this direction that I should watch for the growth of interest on the part of the electorate. If, for instance, there were a strong local feeling in favour of opening additional schools or dispensaries, of laying out new roads or of improving the standard of maintenance of existing communications, and it became clear that this could not be done without additional taxation, fitness for local self-government would be tested by the readiness to face and act on this disagreeable conclusion, and I should expect the electorate gradually to realize that its representatives must be chosen with care, since they possess powers of taxation, and ruthlessly removed if they do not expend moneys raised by such taxation on objects approved by the voters and in a reasonably efficient way. This is in outline the plan I would adopt to stimulate

account partly for the fact that nomination is more highly valued than election. The framing of such a list of primary voters would be a difficult matter, requiring much careful thought. This is in outline the plan I would adopt to stimulate

ernment, and I should try and link it up with village
 by giving those bodies definite representation on the
 taluk board. I am by no means certain, in fact,
 the complete system of village panchayats, the taluk board
 cannot be composed solely of voters themselves chosen
 from the panchayats in numbers and classes corresponding
 to the castes of the villages concerned ; this of course
 is not a electoral college, but if it were a large one representing
 the whole I doubt if the plan would be open to objection in
 experience alone would decide. This scheme possesses the
 merit that it might help to revive and extend the indigenous
 village panchayats, now the lowest sphere on which
 the plan has been tried.

I should guard myself by saying that the taluk board should
 be under technical supervision by educational and medical
 officers, it would have little say in the curriculum of
 schools, full power to decide in what village a new school should

be opened. If the experiment were a success, the electoral system of the
 taluk board should prove a valuable training ground
 for the election of Provincial representatives on the Legislative
 Council and one might hope to find the successful local adminis-
 trators going on to higher things. I have forgotten to mention one
 feature of the scheme to which I attach special importance. It is
 that the taluk board president should be elected by the
 people and given a salary ample enough to secure and retain
 a man of real capacity. If local self-government is to be
 successful and lead to self-government in wider spheres, full time
 men are essential ; men of leisure, wealth, and capacity to take up
 work are scarce, and it will not do to leave the administra-
 tion to lawyers who have other and more absorbing interests.
 The taluk board choose its president, chairman, or chief executive
 whatever name he may be called, but insist on the execu-
 tive responsibility being in the hands of a full time man properly paid.
 Paragraphs 33 to 38.—As an ultimate ideal I have no objection
 to the method of transferring particular departments of the ad-
 ministration to the Legislative Council in its responsible adminis-
 tration, but I differ *in toto* from the method of progress
 in these paragraphs. I should place Group III in the
 taluk board modified so as to approximate to the present sphere of
 district and municipal councils excluding trunk roads and
 and so as to preserve technical supervision over medical
 and educational matters ; one cannot risk such possible develop-
 ment on ayurvedic methods to the exclusion of
 scientific medicine and surgery of the west or changes in
 school curricula and ideals inconsistent with *real* education.
 For instance, the instruction of students in economics based
 on ' drain ' fallacy. With necessary modifications it is, however,

ernment, and I should try and link it up with village giving those bodies definite representation on the taluk board. I am by no means certain, in fact, the complete system of village panchayats, the taluk board might not be composed solely of voters themselves chosen in the panchayats in numbers and classes corresponding to the caste and castes of the villages concerned ; this of course is a electoral college, but if it were a large one representing the whole district I doubt if the plan would be open to objection in principle alone would decide. This scheme possesses the merit that it might help to revive and extend the indigenous village panchayats, now the lowest sphere on which the Government has tried.

I would guard myself by saying that the taluk board should be under technical supervision by educational and medical officers, and that it would have little say in the curriculum of schools, but full power to decide in what village a new school should

be opened. the department of local self-government which should be made over first. Here in Madras it has for some years past been mainly in the portfolio of the Indian Member of the Executive Council. I should reserve, however, to the Provincial Government (or Governor) a power of veto, to be used only in extreme cases. I should not object to Co-operative Credit and the Registration of Deeds being made over at an early stage, but would retain the other administrative duties mentioned in the reserved category, without attempting to indicate the nature of future transfers in advance of practical experience. The local self-government sphere is large enough for a small cabinet, especially if Co-operative Credit and Registration be included with it.

7. *Paragraphs 39-40.*—Powers of raising new revenues are essential, and it would be for the Government of India to prescribe limits necessary in Imperial interests, but subject to such limits the Provincial Legislature should pass the legislation. There is no reason to invoke the Indian (Imperial) Legislative Council.

8. *Paragraph 47.*—I see no fatal objection to dyarchy.

9. *Paragraph 48.*—It would certainly be necessary firmly and consistently to oppose the inevitable attempts to force transfers of funds from reserved heads of administration to transferred heads. The Governor should have plenary powers to block such attempts.

10. I possess no qualifications to pronounce judgement on the wider and more remote issues raised, and I do not think they admit of any immediate decision. Everything depends on the extent to which fitness for local self-government is proved by practical experience.

No. 19

The central idea of your experimental scheme is the gradual transfer of certain branches of the administration to the Provincial Council, with a minister or ministers in charge : and you lay great stress on the need for financial responsibility. The funds at the disposal of the ministry in the first instance would be 'the proportion of revenue spent on the transferred services during the last few years'.

I will assume for the sake of argument that the departments enumerated under head I in your para. 33 are suitable for experimental transfer to a cabinet government (though I doubt very much whether they would give sufficient employment to the four ministers enumerated in your para. 35). Let us suppose then that the cabinet desires to embark upon a policy of agricultural development, or a large scheme for improving the roads in various parts of the province. The funds immediately available will be merely the normal expenditure of the preceding years, and clearly more money will be required. Two courses will be open (or a combination of the two) :

(1) An effort to obtain from the provincial governor a further assignment from funds originally destined for other services, the

The first of these is the fact that the majority of the specimens of the new species are from the same locality, and that they are all of the same size and shape. This is a very unusual occurrence, and it is therefore probable that the new species is a new variety of one of the known species. The second fact is that the new species is found in the same locality as one of the known species, and that it is very similar to it in its external characters. This is also a very unusual occurrence, and it is therefore probable that the new species is a new variety of one of the known species. The third fact is that the new species is found in the same locality as one of the known species, and that it is very similar to it in its external characters. This is also a very unusual occurrence, and it is therefore probable that the new species is a new variety of one of the known species.

DISCUSSION

The new species is very similar to one of the known species, and it is therefore probable that it is a new variety of that species. The new species is found in the same locality as one of the known species, and it is very similar to it in its external characters. This is also a very unusual occurrence, and it is therefore probable that the new species is a new variety of one of the known species. The new species is found in the same locality as one of the known species, and it is very similar to it in its external characters. This is also a very unusual occurrence, and it is therefore probable that the new species is a new variety of one of the known species.

the department of local self-government which should be made over first. Here in Madras it has for some years past been mainly in the portfolio of the Indian Member of the Executive Council. The central idea of your experimental scheme is the gradual transfer of certain branches of the administration to the Provincial Council, with a minister or ministers in charge : and you lay great stress on the need for financial responsibility. The funds at the disposal of the ministry in the first instance would be ' the proportion of revenue spent on the transferred services during the last few years '.

I will assume for the sake of argument that the departments enumerated under head I in your para. 33 are suitable for experimental transfer to a cabinet government (though I doubt very much whether they would give sufficient employment to the four ministers enumerated in your para. 35). Let us suppose then that the cabinet desires to embark upon a policy of agricultural development, or a large scheme for improving the roads in various parts of the province. The funds immediately available will be merely the normal expenditure of the preceding years, and clearly more money will be required. Two courses will be open (or a combination of the two) :

(1) An effort to obtain from the provincial governor a further assignment from funds originally destined for other services, the

governor having in consequence to curtail other contemplated expenditure or to make good by further taxation.

(2) Raising fresh revenue by new taxation or by increasing the scale of existing taxation under the authority of the elected council.

With no greater authority than it has at present over the general provincial budget, the council would most likely be unsuccessful in moving the governor to curtail expenditure on the services under his direct control, and there would be as much controversy between the governor and the cabinet as there now is over the financial arrangements between the Government of India and the Local Governments. It is safe to assume that the two provincial authorities, naturally attaching the greater importance to the services under their direct control, will often be irreconcilable.

The cabinet will often be driven, therefore, to the second course—the imposition of new or increased taxation. Even if it felt that the governor was not refusing the additional money unreasonably, it might very possibly be tempted to cast the odium of the new taxes upon the governor, thus shirking real financial responsibility. I do not think this contingency can be ignored.

Assuming, however, that the cabinet loyally accepted the position that new taxation must be imposed on its responsibility, it would have to consider the possible sources of revenue. Not one of the 'transferred services' under head I (except local railways, which exist in very few provinces) is substantially or essentially a revenue-producing department. The council might not unreasonably conclude that the extra money required could best be raised by increasing the impost under one of the great revenue heads—land revenue, excise, stamps, &c. In the event of *entirely new taxation* I notice your suggestion in paras. 39-40 that it should promote a bill for the consideration of the Government of India (I presume by the executive Government of India, and not by the Indian Legislative Council. The provincial governor would also have to have his say so long as he was directly responsible for any part of the administration and the revenue). But what of increases of existing taxation, under heads not under the control of the provincial council? Many of the revenue enactments in India leave it to the Government of India or the Local Government to prescribe the actual scale of the imposts by rules, which may be likened to the British 'Orders in Council', e. g. the land revenue is nowhere, I believe, fixed in the law itself: excise duties and fees are prescribed by rule. In such cases a bill would not be necessary, and it would suffice to convince the Government of India or the Local Government, as the case might be, that an increase should be imposed. But in the case of mere additions to old revenues, the whole of which were not already at the disposal of the cabinet, an arrangement would be required for the division of the particular head (including the new increase) and for sharing the losses or deficits in bad years. In case of famine, for instance, or even extensive damage by hail, land revenue is remitted; and

governor having in consequence to curtail other contemplated expenditure or to make good by further taxation.

(2) Raising fresh revenue by new taxation or by increasing the scale of existing taxation under the authority of the elected council.

With no greater authority than it has at present over the general provincial budget, the council would most likely be unsuccessful in moving the governor to curtail expenditure on the services under his direct control, and there would be as much controversy between the governor and the cabinet as there now is over the financial arrangements between the Government of India and the Local Governments. It is safe to assume that the two provincial authorities, naturally attaching the greater importance to the services under their direct control, will often be irreconcilable.

The cabinet will often be driven, therefore, to the second course—the imposition of new or increased taxation. Even if it felt that the governor was not refusing the additional money unreasonably, it might very possibly be tempted to cast the odium of the new taxes upon the governor, thus shirking real financial responsibility. I do not think this contingency can be ignored.

Assuming, however, that the cabinet loyally accepted the position that new taxation must be imposed on its responsibility, it would have to consider the possible sources of revenue. Not one of the 'transferred services' under head I (except local railways, which exist in very few provinces) is substantially or essentially a revenue-producing department. The council might not unreasonably conclude that the extra money required could best be raised by increasing the impost under one of the great revenue heads—land revenue, excise, stamps, &c. In the event of *entirely new taxation* I notice your suggestion in paras. 39-40 that it should promote a bill for the consideration of the Government of India (I presume by the executive Government of India, and not by the Indian Legislative Council. The provincial governor would also have to have his say so long as he was directly responsible for any part of the administration and the revenue). But what of increases of existing taxation, under heads not under the control of the provincial council? Many of the revenue enactments in India leave it to the Government of India or the Local Government to prescribe the actual scale of the imposts by rules, which may be likened to the British 'Orders in Council', e. g. the land revenue is nowhere, I believe, fixed in the law itself: excise duties and fees are prescribed by rule. In such cases a bill would not be necessary, and it would suffice to convince the Government of India or the Local Government, as the case might be, that an increase should be imposed. But in the case of mere additions to old revenues, the whole of which were not already at the disposal of the cabinet, an arrangement would be required for the division of the particular head (including the new increase) and for sharing the losses or deficits in bad years. In case of famine, for instance, or even extensive damage by hail, land revenue is remitted; and

receipts from excise and stamps fluctuate from year to year. Additional revenue raised at the instance of the council would be liable to the same fluctuations, and something like the present contracts between the Government of India and the Local Governments would again be required. In your Study No. 1 you have dealt at length with the drawbacks to that system. It works as between the Government of India and the Local Governments, because the Government of India is in the position of being able to give a flat refusal, which a subordinate Government cannot question; but who is to decide between the provincial governor and a responsible cabinet?

My conclusion is that the financial arrangements alone would give much scope for friction between the governor and the cabinet, at least in the transition stages preliminary to full responsibility in provincial affairs. This may not be a fatal objection, but I think at least an endeavour should be made to work out something which would minimize the risk.

I should also like to draw attention to another point not touched on in your scheme at all. Possibly you have omitted it for the present with a view to concentrating attention on the central idea. Are the future provincial parliaments to be single- or double-chamber institutions? I think most important countries have deliberately chosen the two-chamber system, and personally I should not trust a single chamber in this country; for I am not satisfied that the bulk even of the educated classes have sufficient backbone and independence to make them speak out publicly against proposals of which they really disapprove.

Incidentally, in order to secure freedom of voting in divisions in the council I should say that the BALLOT is essential. This is of course a minor matter at this stage, but it is worth mentioning, as pointing to the need for ample safeguards against hasty measures, whether administrative or legislative.

I am afraid this note is more destructive than constructive, but I have not yet been able to conceive any really practical scheme which shall suit the necessary transitional stages. I am convinced that the introduction of complete responsible government in one step is totally out of the question, and the existence of divided responsibility in the intermediate stages must give rise to many difficulties and possibly to dangers.

No. 20

(1) If you want to introduce representative government you can only do so in India by keeping a strong bureaucratic government there to introduce it, so

Don't water us any more with an Indian element. We have enough water in our constitution, and if you water us too much we will drift to native state government and down to Mandarin's

receipts from excise and stamps fluctuate from year to year. Additional revenue raised at the instance of the council would be liable to the same fluctuations, and something like the present contracts between the Government of India and the Local Governments would again be required. In your Study No. 1 you have dealt at length with the drawbacks to that system. The odd million literates.

The 300 million others.

You must cater for the 300 million others.

I am all for

One man, one vote.

Age 25 and over.

You will say, literates only know how to vote. I reply 'that may be', but in India it is quite easy for a Collector to take a poll of 8,000 to 10,000 illiterate voters in half a day and *I'll guarantee* to do it.

An Indian crowd is most amenable. It is quite easy to

(1) Pay off 400 beaters at 2 an. each in half an hour.

(2) Pay off 5,000 coolies in a famine camp in three hours.

I could easily take the poll of 8,000 to 10,000 in half a day.

Assume they are all illiterate, quite easy, don't ask them to ballot. Have two enclosures red and blue, or any colour you like. Let them go into the one they want to, or some other arrangement which one could easily devise. You could not take a poll of 8,000 miners in Cumberland in this way, but one could of the natives of India and there would be no free fight. No drunkenness and no bribery and corruption—that is the beauty of the Indian voter with his magistrate on the ground.

I start then with a constituency of 8,000 to 10,000 voters—that means 50,000 population.

That gives for every one of the divisions in the Province between

Abstract

Abstract

1. *Journal of the American Medical Association*, 2000; 284: 2689-2695.

government. This is no agency to control elections, keep law and order, and collect revenue.

(2) It will be safe to give the following to the representative government :

- (a) (i) All District Board work.
- (ii) Excise.
- (iii) Income Tax.
- (iv) Personal Law.
- (v) Temples, mosques, and religious trusts.
- (vi) *All* town areas and municipalities.

Let them legislate for all these.

(b) Taxation.

- (i) Let them put on any cesses they like.
Collector will assess and collect.
- (ii) Let them impose income tax rates.
Collector will assess and collect.
- (iii) Let them impose excise.
Collector will assess and collect.

(c) Appointments.

Hon. Magistrates.

Hon. Munsiffs.

Temple, &c., administrators.

Representative Assembly.

I start from bed-rock. Who do you cater for ?

The odd million literates.

The 300 million others.

You must cater for the 300 million others.

I am all for

One man, one vote.

Age 25 and over.

You will say, literates only know how to vote. I reply 'that may be', but in India it is quite easy for a Collector to take a poll of 8,000 to 10,000 illiterate voters in half a day and *I'll guarantee* to do it.

An Indian crowd is most amenable. It is quite easy to

(1) Pay off 400 beaters at 2 an. each in half an hour.

(2) Pay off 5,000 coolies in a famine camp in three hours.

I could easily take the poll of 8,000 to 10,000 in half a day.

Assume they are all illiterate, quite easy, don't ask them to ballot. Have two enclosures red and blue, or any colour you like. Let them go into the one they want to, or some other arrangement which one could easily devise. You could not take a poll of 8,000 miners in Cumberland in this way, but one could of the natives of India and there would be no free fight. No drunkenness and no bribery and corruption—that is the beauty of the Indian voter with his magistrate on the ground.

I start then with a constituency of 8,000 to 10,000 voters—that means 50,000 population.

That gives for every one of the divisions in the Province between

90-130 members. J. would have 44, K. 26 only, but make their constituencies populations of smaller numbers. Say 25,000 and 12,000 respectively as distances are big. Put the Commissioner over them in same position as a Colonial Governor and let them go ahead. Keep your magistrate and collector for

Law administration.

Police administration.

Revenue administration.

Electoral control.

Any constituency that felt this Divisional assembly was going the pace too fast would be at liberty to vote itself out of its clutches and come back to bureaucratic Government under the Collector and Magistrate.

Some might come back and very quick!

Make no distinction between rural and urban.

Very important, one man, one vote.

In 7, or 10, or 15 years' time the Leader of the Assembly and the Leader of the Opposition and two Collectors of Districts with the Commissioner as President would sit as a Committee and report to the Provincial Committee what further powers that individual Divisional Assembly should have.

Until the period of resettlement there should be no agitation permitted for further partition of spheres of action as between the bureaucracy and the Divisional Assembly. This makes the masses and not the classes the voting and perhaps the ruling factor.

Provincial Council.

Clip the wings of the legislative council. As regards powers, give it legislative powers only, no power over budget, and let there be a provincial settlement of contributions (if any are required) of provincial money to Divisional Assemblies every 7 or 10, &c., years, just as you settle spheres of action.

The obvious council (leg.) would be

The leader of the Assembly }

The leader of the Opposition } and Commissioners.

Note.—A village panchayat electing a head of the panch, then a number of heads of the panch form a union electing a representative and so on, ending finally in a certain number of delegates electing your member of the assembly for the constituency of 50,000 would never do.

Every one of the delegates would be bought. They would auction their votes or be intimidated or influenced, all the way down. The only way to play fair to the masses is to have one man one vote and vote straight for the member and let the magistrate and collector control the election.

Hence don't water the I.C.S. more than you can help.

A district of one million means twenty elections. The magistrate and collectors and his Joint could work them off in two months and preside at each.

90-130 members. J. would have 44, K. 26 only, but make their constituencies populations of smaller numbers. Say 25,000 and 12,000 respectively as distances are big. Put the Commissioner over them in same position as a Colonial Governor and let them go ahead. Keep your magistrate and collector for

Hence don't water the I.C.S. more than you can help.

A district of one million means twenty elections. The magistrate and collectors and his Joint could work them off in two months and preside at each.

Let the first Assembly live for two years, then have elections again for three years; language of the assembly and script to be local. English barred.

Before Montagu comes out the first thing to settle and put down is the racial antagonism which has sprung up.

The literates call me an Anglo-foreigner. I call myself an 'old timer'.

However, I have thought about this a good deal when threshing water and getting no fish, and to my mind this is the way to play fair with the country and its 300 million, but it is absurd to assume that England can ever play fair with them if it attempts it by means of a watered bureaucracy. All agitation to water it should be suppressed. India for the Indians means an Indian bureaucracy, and would end in

Mandarin Government,

and no Mandarin Government or semi-Mandarin Government could control elections which year by year will become one of the most important functions of the District Magistrate. Under this scheme the District Magistrate will be required for one or two decades more. By that time the Divisional Assemblies would be really powerful bodies, and might have produced a better generation of politicians fit to administer and to enter the ranks of the bureaucracy which would be less necessary as power expanded towards Divisional Assemblies.

Comments from European Members of Public Services other than the I.C.S.

No. 21. FROM A TEACHER

1. The constitutional proposals for India are a dependent part of a comprehensive scheme for Imperial reconstruction, and must therefore inevitably share the strength or weakness of the latter. They must lose much of their argumentative force in the eyes of those who are unable to accept the larger scheme. Personally I do not believe in the desirability or feasibility of an Imperial Federal Parliament on an elective basis. What the ultimate solution will be no man can foretell, it will be decided by the course of events; but I think it is more likely to take the form of an Imperial Executive, than an Imperial elective Parliament, assisted possibly by an Imperial senate, which is not elective.

2. A corollary to the larger schemes is the periodical and prolonged review of Indian affairs by the Imperial Parliament. Even supposing this were made possible, I can see no attractions in returning to a course of procedure, which change of conditions has rendered obsolete. In the days of the Company there were obvious reasons, administrative and financial, why Parliament should watch and review the affairs of a company, which depended for its existence on itself, but those reasons ceased to exist as soon as India came

Abstract

[illegible]

Abstract

Let the first Assembly live for two years, then have elections again for three years; language of the assembly and script to be local. English barred.

Before Montagu comes out the first thing to settle and put down is the racial antagonism which has sprung up.

The literates call me an Anglo-foreigner. I call myself an 'old timer'.

However, I have thought about this a good deal when threshing water and getting no fish, and to my mind this is the way to play fair with the country and its 300 million, but it is absurd to assume that England can ever play fair with them if it attempts it by means of a watered bureaucracy. All agitation to water it should be suppressed. India for the Indians means an Indian bureaucracy, and would end in

Mandarin Government,
and no Mandarin Government or semi-Mandarin Government could control elections which year by year will become one of the most important functions of the District Magistrate. Under this scheme the District Magistrate will be required for one or two decades more. By that time the Divisional Assemblies would be really powerful bodies, and might have produced a better generation of politicians fit to administer and to enter the ranks of the bureaucracy which would be less necessary as power expanded towards Divisional Assemblies.

Comments from European Members of Public Services other than the I.C.S.

NO. 21. FROM A TEACHER

1. The constitutional proposals for India are a dependent part of a comprehensive scheme for Imperial reconstruction, and must therefore inevitably share the strength or weakness of the latter. They must lose much of their argumentative force in the eyes of those who are unable to accept the larger scheme. Personally I do not believe in the desirability or feasibility of an Imperial Federal Parliament on an elective basis. What the ultimate solution will be no man can foretell, it will be decided by the course of events; but I think it is more likely to take the form of an Imperial Executive, than an Imperial elective Parliament, assisted possibly by an Imperial senate, which is not elective.

2. A corollary to the larger schemes is the periodical and prolonged review of Indian affairs by the Imperial Parliament. Even supposing this were made possible, I can see no attractions in returning to a course of procedure, which change of conditions has rendered obsolete. In the days of the Company there were obvious reasons, administrative and financial, why Parliament should watch and review the affairs of a company, which depended for its existence on itself, but those reasons ceased to exist as soon as India came

under the direct Government of the Crown. The consequent neglect of India by Parliament has been, I think, no unmixed evil: it has in fact been a blessing in disguise. Even in the eighteenth century the incursions of English politicians into Indian affairs were not always fortunate. Burke, e.g., disgraced himself in the matter, and Pitt's connexion with the matter left a blemish on his career. It has been a happy accident that Indian affairs have been for the most part removed from the interference of inevitable ignorance and the heated and unwholesome atmosphere of party politics. If Plato is right, and I think he is, in laying it down that wisdom is the first qualification for good Government, it is a good thing that the unwise have neglected Indian affairs. Nor is it to be deplored that Royal Commissions have failed to exercise the influence on public opinion that Parliamentary committees are said to have done. Their personnel is often unsatisfactory, e.g. in the latest, and their recommendations are often not according to knowledge.

3. The issue of a fresh charter is advocated taking the form of the promise of self-government. I strongly object to any such thing. As a matter of practical policy in ordinary life, I think it is most important never to promise what you cannot perform. (I may say that the rule has constantly to be applied in every day official life, which is lived in an atmosphere of importunity) and I see no possibility of granting self-government in any real sense to India within any period that one can foresee. Such a charter would only lead to disappointment, discontent, and charges of bad faith, unless of course the advent of chaos can be contemplated with equanimity. In all matters of politics in India, it is important to realize that the Indian has acquired the vocabulary of western politics (and morals) but attaches to the words only a fraction of the meaning attached to them by Englishmen. They know the *onomata* but not the *pragmata*. The Indian has only a verbal knowledge of self-government: hence the promise of it would be equivocal, because in India there is a deep gulf between thought and things which will take a lot of filling up. It is worth while remembering that the proclamation of 1858 has meant different things to Europeans and Indians.

4. The advocacy of charters is part and parcel of the proposal to adopt a written constitution for the Empire after the American model. I see no need for this. The British Empire will have to settle its problems in its own way, and as General Smuts acutely observed, 'not follow precedents, but create them'. In high politics, as in official and private life, 'least said soonest mended' is a golden rule: unfortunately, a perpetual flux of talk is the fashion of the hour: and it flows in torrents from the heights! We could do with a little more of Moses, and a great deal less Aaron. Nor do I think it necessary to follow French precedents in the enunciation of general principles. The British character, no doubt, suffers from the defects of its qualities, and dislike of system and logic is one of them. But I do not think it will improve itself by imitation

under the direct Government of the Crown. The consequent neglect of India by Parliament has been, I think, no unmixed evil: it has in fact been a blessing in disguise. Even in the eighteenth century the incursions of English politicians into Indian affairs were not always fortunate. Burke, e.g., disgraced himself in the matter, and Pitt's connexion with the matter left a blemish on his career. It has been a happy accident that Indian affairs have been for the most part removed from the interference of inevitable ignorance and the heated and unwholesome atmosphere of party politics. If Plato is right, and I think he is, in laying it down that wisdom is the first qualification for good Government, it is a good thing that the unwise have neglected Indian affairs. Nor is it to be deplored that Royal Commissions have failed to exercise the influence on public opinion that Parliamentary committees are said to have done. Their personnel is often unsatisfactory, e.g. in the latest, and their recommendations are often not according to knowledge.

3. The issue of a fresh charter is advocated taking the form of the promise of self-government. I strongly object to any such thing. As a matter of practical policy in ordinary life, I think it is most important never to promise what you cannot perform. (I may say that the rule has constantly to be applied in every day official life, which is lived in an atmosphere of importunity) and I see no possibility of granting self-government in any real sense to India within any period that one can foresee. Such a charter would only lead to disappointment, discontent, and charges of bad faith, unless of course the advent of chaos can be contemplated with equanimity. In all matters of politics in India, it is important to realize that the Indian has acquired the vocabulary of western politics (and morals) but attaches to the words only a fraction of the meaning attached to them by Englishmen. They know the *onomata* but not the *pragmata*. The Indian has only a verbal knowledge of self-government: hence the promise of it would be equivocal, because in India there is a deep gulf between thought and things which will take a lot of filling up. It is worth while remembering that the proclamation of 1858 has meant different things to Europeans and Indians.

4. The advocacy of charters is part and parcel of the proposal to adopt a written constitution for the Empire after the American model. I see no need for this. The British Empire will have to settle its problems in its own way, and as General Smuts acutely observed, 'not follow precedents, but create them'. In high politics, as in official and private life, 'least said soonest mended' is a golden rule: unfortunately, a perpetual flux of talk is the fashion of the hour: and it flows in torrents from the heights! We could do with a little more of Moses, and a great deal less Aaron. Nor do I think it necessary to follow French precedents in the enunciation of general principles. The British character, no doubt, suffers from the defects of its qualities, and dislike of system and logic is one of them. But I do not think it will improve itself by imitation

of alien models. It is true that the British mind does not love the formulation of systems, but it is not for that reason wholly unsystematic. It often bears, as it has been finely said, its system in its heart, and it expresses itself in practical action, not in formulation. I think, therefore, that little would be gained by issuing a new charter of self-government. That no doubt is the ultimate goal, but it is so far off, that I doubt if much good could be done by making it appear that it was, as it is not, within the sphere of present practical politics.

5. I do not think that precedents and analysis drawn from other countries, e. g. America and the self-governing dominions, are helpful in dealing with Indian problems. India is *sui generis*—in a category by itself. There is great truth in the paradox that, 'there is no such country as India'. 'India' and 'Indians' in connexion with politics are very much idols of language, though the common rhetorical use of them tends to blind men to the fact. The problem of government cannot, in my opinion, be usefully considered except in close connexion with the social conditions of the people: and such things as the caste system, the marriage customs, the position of women, the variety and conflict of religions, the small amount of education, and the peculiar historical traditions of the country differentiate the population from the population of the self-governing dominions. There has been much to develop servility and oppression: and much to destroy any germs of self-government. It is a question whether these germs have not been damaged beyond repair. But supposing they have not, they need very careful treatment. Time and rest, not premature exercise, are essential to the cure of the paralytic patient. The points mentioned are so commonplace that there is a tendency to ignore them. But they can only be ignored at one's peril. They constitute the facts of the situation. Constitutions cannot be invented *in vacuo*, without definite reference to the life and nature of the people for whom they are intended. It is no use to pick them up, in Homer's phrases, 'from a rock or a tree'. It may be said that a people may learn fresh habits. Certainly, but habits are of slow development, especially when opposite habits have to be unlearned, and they are not likely to be generated by what amounts to a sudden revolution in the machinery of government.

6. It is allowed that the whole system of British Government in India is derived from autocratic antecedents. Very well, that is all the more reason for going slow in the direction of self-government, rather than by sudden revolution. As it is, the so-called instalments of self-government in the shape of local and provincial councils can scarcely be called a success. They are very much a matter of make-believe: they are a veneer—while the staple of the administration is personal rule. Would it not be wiser to let them justify themselves by success, before making further advances, in obedience to abstract theories?

7. It would no doubt be wise to make decentralization more of a reality in the relations between the government of India and the provincial governments. But this can be done without introducing

of alien models. It is true that the British mind does not love the formulation of systems, but it is not for that reason wholly unsystematic. It often bears, as it has been finely said, its system in its heart, and it expresses itself in practical action, not in formulation. I think, therefore, that little would be gained by issuing a new charter of self-government. That no doubt is the ultimate goal, but it is so far off, that I doubt if much good could be done by making it appear that it was, as it is not, within the sphere of present practical politics.

5. I do not think that precedents and analysis drawn from other countries, e. g. America and the self-governing dominions, are helpful in dealing with Indian problems. India is *sui generis*—in a category by itself. There is great truth in the paradox that, 'there is no such country as India'. 'India' and 'Indians' in connexion with politics are very much idols of language, though the common rhetorical use of them tends to blind men to the fact. The problem of government cannot, in my opinion, be usefully considered except in close connexion with the social conditions of the people: and such things as the caste system, the marriage customs, the position of women, the variety and conflict of religions, the small amount of education, and the peculiar historical traditions of the country differentiate the population from the population of the self-governing dominions. There has been much to develop servility and oppression: and much to destroy any germs of self-government. It is a question whether these germs have not been damaged beyond repair. But supposing they have not, they need very careful treatment. Time and rest, not premature exercise, are essential to the cure of the paralytic patient. The points mentioned are so commonplace that there is a tendency to ignore them. But they can only be ignored at one's peril. They constitute the facts of the situation. Constitutions cannot be invented *in vacuo*, without definite reference to the life and nature of the people for whom they are intended. It is no use to pick them up, in Homer's phrases, 'from a rock or a tree'. It may be said that a people may learn fresh habits. Certainly, but habits are of slow development, especially when opposite habits have to be unlearned, and they are not likely to be generated by what amounts to a sudden revolution in the machinery of government.

6. It is allowed that the whole system of British Government in India is derived from autocratic antecedents. Very well, that is all the more reason for going slow in the direction of self-government, rather than by sudden revolution. As it is, the so-called instalments of self-government in the shape of local and provincial councils can scarcely be called a success. They are very much a matter of make-believe: they are a veneer—while the staple of the administration is personal rule. Would it not be wiser to let them justify themselves by success, before making further advances, in obedience to abstract theories?

7. It would no doubt be wise to make decentralization more of a reality in the relations between the government of India and the provincial governments. But this can be done without introducing

a thoroughly alien system of cabinet government depending on party majorities. The latter seems to me to be unthinkable in the present condition of India. The actual scheme proposed appears to be highly artificial: and as I object to the principle, it is no use to criticize the details. I will, however, make one or two remarks:

(1) It is misleading to use the word 'national' as a synonym for 'imperial', for there is no such thing as the 'nation of India', nor likely to be for a very long time to come. It is a figment of political agitators or impatient idealists.

(2) Cabinet government seems to be quite incompatible with the existence of a bureaucracy, which I regard as indispensable to India. It is a mistake to look upon Indian officials as occupying the same position as the permanent civil service at home. To all practical purposes, officials *are* the government in India. In England they are not.

(3) Again, the words, 'popularize the control of government', are misleading. It is time enough to talk of popularization when you can talk intelligibly of 'the people', which, at present, is impossible.

(4) Even in the more advanced provinces of India, the number of people capable of taking part in politics in any real sense is extremely small. And those who appear to be have acquired the vocabulary rather than the reality of party politics. As a matter of fact, party government, responsible government, cabinet government, are mere phrases: as long as politicians represent principally themselves, and elections are the force that they are, 'responsibility of representatives to the people' are words without meaning.

(5) At the best, the electorate would be so small, that self-government could not be popular government and would in practice be an oligarchy, and an oligarchy of a very unattractive kind.

(6) The letter proceeds apparently on the hypothesis that the starting-point for progress in India is the measure of 'self-government' already granted. But that has hardly passed beyond the experimental stage. Much might be said in favour of the view that it is largely premature. Surely it would be wise to let these experiments pass out of the experimental stage before proceeding farther.

(7) In para. 39 it is assumed that there are unlimited sources of taxation still untouched, which a popular government might get hold of. I think this is extremely doubtful: and that Lord Bryce is perfectly right in his warning that one of the greatest dangers to Indian administration, as it was to the Roman Empire, is the laying on of too heavy financial burdens.

(8) It is not the want of local self-government that has impeded enterprise, but the character and social conditions of the people. British control has not been a drag on the wheel of local initiative. It has rather been in the position of those who piped to the children in the market-place who refused to dance.

(9) The Dewans of Native states are not only not an argument for popular government, but exactly the contrary. They are ministers

a thoroughly alien system of cabinet government depending on party majorities. The latter seems to me to be unthinkable in the present condition of India. The actual scheme proposed appears to be highly artificial: and as I object to the principle, it is no use to criticize the details. I will, however, make one or two remarks:

(1) It is misleading to use the word 'national' as a synonym for 'imperial', for there is no such thing as the 'nation of India', nor likely to be for a very long time to come. It is a figment of political agitators or impatient idealists.

(2) Cabinet government seems to be quite incompatible with the existence of a bureaucracy, which I regard as indispensable to India. It is a mistake to look upon Indian officials as occupying the same position as the permanent civil service at home. To all practical purposes, officials *are* the government in India. In England they are not.

(3) Again, the words, 'popularize the control of government', are misleading. It is time enough to talk of popularization when you can talk intelligibly of 'the people', which, at present, is impossible.

(4) Even in the more advanced provinces of India, the number of people capable of taking part in politics in any real sense is extremely small. And those who appear to be have acquired the vocabulary rather than the reality of party politics. As a matter of fact, party government, responsible government, cabinet government, are mere phrases: as long as politicians represent principally themselves, and elections are the force that they are, 'responsibility of representatives to the people' are words without meaning.

(5) At the best, the electorate would be so small, that self-government could not be popular government and would in practice be an oligarchy, and an oligarchy of a very unattractive kind.

(6) The letter proceeds apparently on the hypothesis that the starting-point for progress in India is the measure of 'self-government' already granted. But that has hardly passed beyond the experimental stage. Much might be said in favour of the view that it is largely premature. Surely it would be wise to let these experiments pass out of the experimental stage before proceeding farther.

(7) In para. 39 it is assumed that there are unlimited sources of taxation still untouched, which a popular government might get hold of. I think this is extremely doubtful: and that Lord Bryce is perfectly right in his warning that one of the greatest dangers to Indian administration, as it was to the Roman Empire, is the laying on of too heavy financial burdens.

(8) It is not the want of local self-government that has impeded enterprise, but the character and social conditions of the people. British control has not been a drag on the wheel of local initiative. It has rather been in the position of those who piped to the children in the market-place who refused to dance.

(9) The Dewans of Native states are not only not an argument for popular government, but exactly the contrary. They are ministers

of personal arbitrary rulers to whom, and not to 'the people', they are responsible. They are monuments of Autocratic rule : entirely dependent on the caprice of the ruler : and hold their power, so long as they enjoy his favour. They have no responsibility to an electorate, such as representative statesmen have in a popular government. They therefore supply no argument for the capacity of Indians for participation in 'responsible' government in the Parliamentary sense of the word.

Finally, for politics, as in other spheres, it is a good rule not to let the child run before it can walk (and childhood, as Aristotle reminds us, is not measured by age), perhaps some peoples like individuals never grow up *politically*. At present, I am convinced that India is not fit to run : to enjoy self-government. But she can be made to walk, and perhaps later, in the dim future, she will be able to run. Meanwhile, her interest is good government, not self-government ; and good government she will not get except under the guiding hand of the British Raj. Doses of self-government should be small and very carefully administered. It is a truism to apply *festina lente* to the political future of India. But it is none the less true. It is no use trying to make a bullock cart go the pace of a motor-car. I believe one of the greatest obstacles to solid progress is 'hurry' and unduly forcing the pace. Those who have faith in India's future will not get into a fuss : for he that believeth will not make haste !

NO. 22. FROM A TEACHER

I fear that you suspected me of trivial conventionality when some nights ago I disclaimed any practical knowledge of the Indian problems in which you are engaged. But, indeed, that was no mere form of words with me. Now you write for useful criticism. And the fact remains that I have none to offer for the reason already given. But having read your letter with care, I desire more than ever to help—if only in academic manner—if it be possible. And so I refer to two passages that have set me thinking again over some familiar ground.

In § 17 you write : 'For despite all this diversity you have only to look at the map to see that in India proper there is national unity underlying the diversity.' I have studied your context ; but I don't understand what definite meaning you attach to the term *national unity* in that context. The map of India, the history of its many countries and its many religions—all these to my mind proclaim diversity without shadow of relief. Pray don't think me discourteous. I have no doubt that the word and the thought hold a definite content for you, though at the moment I cannot focus it. At any rate the point is of small importance as between you and me ; for as Englishmen we must mean the same thing in practice. But I do feel that when we talk to our Indian friends and fellow subjects of national unity in India we ought to lay bare our thought in the simplest terms. Their mental background must be and is very

of personal arbitrary rulers to whom, and not to 'the people', they are responsible. They are monuments of Autocratic rule : entirely dependent on the caprice of the ruler : and hold their power, so long as they enjoy his favour. They have no responsibility to an electorate, such as representative statesmen have in a popular government. They therefore supply no argument for the capacity of Indians for participation in 'responsible' government in the Parliamentary sense of the word.

Finally, for politics, as in other spheres, it is a good rule not to let the child run before it can walk (and childhood, as Aristotle reminds us, is not measured by age), perhaps some peoples like individuals never grow up *politically*. At present, I am convinced that India is not fit to run : to enjoy self-government. But she can be made to walk, and perhaps later, in the dim future, she will be able to run. I fear that you suspected me of trivial conventionality when some nights ago I disclaimed any practical knowledge of the Indian problems in which you are engaged. But, indeed, that was no mere form of words with me. Now you write for useful criticism. And the fact remains that I have none to offer for the reason already given. But having read your letter with care, I desire more than ever to help—if only in academic manner—if it be possible. And so I refer to two passages that have set me thinking again over some familiar ground.

In § 17 you write : 'For despite all this diversity you have only to look at the map to see that in India proper there is national unity underlying the diversity.' I have studied your context ; but I don't understand what definite meaning you attach to the term *national unity* in that context. The map of India, the history of its many countries and its many religions—all these to my mind proclaim diversity without shadow of relief. Pray don't think me discourteous. I have no doubt that the word and the thought hold a definite content for you, though at the moment I cannot focus it. At any rate the point is of small importance as between you and me ; for as Englishmen we must mean the same thing in practice. But I do feel that when we talk to our Indian friends and fellow subjects of national unity in India we ought to lay bare our thought in the simplest terms. Their mental background must be and is very

different from our own in reality. Of course I also know how difficult it often is to talk quite plainly to these friends without hurting their natural susceptibilities.

This crux of national unity in India is connected (in my train of thought) with a second passage in § 12 of your letter: 'The first condition of popular government is that a definite section of the people should aspire to achieve for themselves a better life not only in things material but in *things spiritual*.' The italics are mine to indicate (for me) that you have put your finger on the problem of Indian problems. Now let me say without reserve or any fence of debate what I mean by spirituality. At the beginning and at the end, I mean an ideal of self-sacrifice and the practical life that issues therefrom. This ideal did not exist in ancient India—if my reading of the history be correct. How much or how little of it is a living power in Modern India I find it hard to say. In homely phrase, that's just it! Schemes for Home Rule in India strike me with a painful sense of unreality. Is it thinkable that national unity—itsself an ideal—should take root in this country and grow before tens of thousands of educated Indians have learnt the lessons of self sacrifice within the narrower groups of common social life? Are they being taught in detail what of self-sacrifice is involved in this, that and every other political right that is worth striving for? There is a true beginning of all such things. Are they being taught that?

NO. 23. FROM A FRONTIER OFFICER

I have read through this pamphlet very carefully. It contains a suggestion that the end which should be and which will, I hope, be the aim of British Policy in India, is to educate Indians in the art of governing themselves, and gradually to hand over more and more of the Government of India to Indians. Personally I am in thorough agreement with the scheme as outlined by Mr. Curtis, namely, a system of gradual devolution of powers to elected or other members of Council.

I was at first inclined to think that perhaps we should begin at the bottom and first educate our District Boards and Municipal Committees, but on thinking it over I have come to the conclusion that we should not. We must remember that representative institutions in England did not grow from the bottom—there was a parliament in England centuries before there were any local bodies. We may well begin then with the Provincial Governments as suggested, but we can also educate the District Boards and Municipal Committees *pari passu* on the same system.

I can see no reason whatever why a system of dyarchy should not work in India as well as everywhere else. In fact it does exist and works well.

I am in most hearty agreement with Mr. Curtis that whatever system may be ultimately adopted, what is wanted is that a definite goal should be given to the officers of Government in India in the light of which they should view their smallest actions, and that aim should be self-government for India within the Empire.

IV

THE STRUCTURE OF INDIAN GOVERNMENT (*June 1917*)

(a) ALL INDIA

§ 1. THE final executive authority for India is the Imperial Cabinet in London. The selection of the Governor-General, for instance, rests with the Cabinet. Any detail of Indian administration might, in fact, come up for Cabinet decision, though, of course, it seldom does so. The Cabinet is responsible to the Imperial Parliament, which is in turn responsible to the British electorate. The root of Indian Government is at present in that electorate.

§ 2. The Secretary of State for India, the minister responsible to the Cabinet for Indian affairs, who therefore controls the Governor-General, is a member of the Cabinet. He is assisted by a council of from ten to fourteen members, of whom nine must have ten years' Indian experience. With certain exceptions all communications sent to India must come before the members of the Council, though, except in matters of finance, the Secretary of State is not bound by their advice. This does not, however, apply to matters affecting peace or war or relations with foreign or native states, if the Secretary of State decides to treat them as secret, in which case they are not submitted to the Council.

The Governor-General, except in matters of unusual importance, can only act with the advice of his Executive Council and, indeed, may be overruled by a majority of that body. In ordinary matters the executive authority for India is the Governor-General-in-Council, which consists of the Commander-in-Chief and six ordinary members, of which three must in practice be members of the Indian Civil Service.

Subject to the above control, the responsibility for all the functions of government throughout British India thus rests on the Governor-General-in-Council. The business is at present divided amongst the various members, as follows :

The Governor-General—Foreign and Political Departments.

The Commander-in-Chief—The Army.

THE HISTORY OF THE UNITED STATES OF AMERICA

THE FIRST BOOK

The first book of the history of the United States of America is the story of the early years of the nation. It begins with the first settlers who came to the New World in the early 17th century. These settlers were mostly English, but there were also Dutch, Swedish, and other Europeans. They came to the New World for many reasons, including the search for new land, the desire for religious freedom, and the hope of finding wealth.

The first settlers found a land that was very different from the one they had left behind. They had to learn how to live in a new environment, and they had to learn how to get along with the Native Americans who already lived there. The first settlers were very brave and hardworking, and they made many sacrifices to build a new life in the New World.

The first settlers also brought with them many of the ideas and values of the European world. They believed in the importance of religion, and they believed in the rights of individuals. They also believed in the importance of a strong government, and they worked to create a system of laws that would protect their rights and the rights of others.

The first settlers also brought with them many of the problems of the European world. They had to deal with disease, famine, and war. They also had to deal with the Native Americans, who often saw the settlers as a threat to their way of life. The first settlers were very brave and hardworking, and they made many sacrifices to build a new life in the New World.

THE HISTORY OF THE UNITED STATES OF AMERICA
THE FIRST BOOK

The Home Member—Internal affairs not falling within the scope of any other Member of Council ; e. g. Police, Jails, Health, Criminal and Civil Justice.

The Member for Revenue and Agriculture—Land Revenue Administration, including Famine, Tenancy, and also Co-operative Credit, Public Works, including Irrigation, Agriculture and Forests.

The Member for Commerce—Commerce and Industry, Railways, Posts and Telegraphs.

The Financial Member—Finance and Audit.

The Legal Member—Legislation.

The Member for Education—Education, Local Self-Government, Sanitation, and Archaeological Survey.

For five months, during the winter, the Government of India with its Secretariat sits at Delhi ; for the remaining seven months it migrates to Simla, a station situated in the foot hills of the Himalayas some 6,000 ft. above the sea.

§ 3. So far we have been following a direct chain of administrative authority. The Imperial Cabinet controls the Secretary of State and the Secretary of State the Government of India. We now come to a stage where administrative authority begins to branch. Some functions the Government of India discharges for itself through departments of its own. In others it acts through a number of provincial governments. It will be convenient to enumerate these provinces at once.

First of all come the two original Presidencies of Bombay and Madras, and the new Presidency of Bengal, each with a Governor-in-Council. Like the Governor-General he is usually a prominent man, with no previous experience of India, who is sent from England direct. Coming to India with fresh and unbiased minds these Governors are intended to supplement the professional views of the permanent officials, and also to act as a connecting link between them and the European communities of Calcutta, Bombay, and Madras. Like the Governor-General, the Governor of a Presidency may be overruled by his council.

Next in order, though not in importance, comes the province of Bihar and Orissa with a Lieutenant-Governor-in-Council. In this case the existence of a council is due to the fact that Bihar and Orissa formed part of Bengal and that council government had already been established there before this area was constituted as a separate province.

Then come the United Provinces of Agra and Oudh, the Punjab and Burma, severally controlled by Lieutenant-

Abstract

Abstract

 NATIONAL CENTER FOR EDUCATION STATISTICS
 U.S. DEPARTMENT OF EDUCATION

Governors, members of the I.C.S., who administer without the aid of councils.

The Central Provinces and Assam are each administered by a Chief Commissioner.

To these nine provinces must be added the minor areas of the North-West Frontier Province, Delhi, British Baluchistan, Ajmer-Merwara, Coorg, and the Andaman Islands, all of which may be ignored for the purpose of this inquiry.

§ 4. Provincial governments are an essential feature of all countries which in population or area exceed a certain size. Territories so large as the United States of America, Canada, Australia, South Africa, or India could not indeed be governed without them. But the relations which exist between the central and the provincial governments in these countries are in marked contrast to those which exist in India. Let us take the case of Canada, where the mutual relations of the central and provincial governments are closer than in the United States or Australia, but not so close as in South Africa. The constitution of Canada is fixed by the British North America Act of the Imperial Parliament. It can only be altered by the Imperial Parliament, a fact due to the public opinion, not of the British, but of the Canadian people themselves. Under this Act certain powers and revenues are assigned to provincial governments which derive their authority from the electorates of each province. All other powers and revenues are reserved to the central Government, which can and does supplement the provincial revenues by grants which lie within the discretion of the central parliament. Otherwise the powers and revenues of provincial governments are solely determined by the constitution. The mainspring of the central Government is the Canadian electorate as a whole. The mainsprings of the provincial governments are the provincial electorates. It is a solar system in which each body revolves on its own axis and travels in its own orbit, while the power which keeps them in due relation to each other and the central body is that of the constitution. The planets are each moved by an impetus of their own. They are not impelled by the sun, but by the power of the system in which they revolve. The central government can issue no orders to the provincial governments. They cannot bind them with regulations, and it follows that the officers of the provincial governments are absolutely distinct from those of the central government. In Canada the government at Ottawa is

the environment. The first of these is the impact of mechanization on the land itself. The second is the impact on the atmosphere. The third is the impact on the water resources. The fourth is the impact on the soil. The fifth is the impact on the flora and fauna. The sixth is the impact on the human population. The seventh is the impact on the economy. The eighth is the impact on the culture. The ninth is the impact on the society. The tenth is the impact on the future.

Governors, members of the I.C.S., who administer without the aid of councils.

The Central Provinces and Assam are each administered by a Chief Commissioner.

To these nine provinces must be added the minor areas of the North-West Frontier Province, Delhi, British Baluchistan, Ajmer-Merwara, Coorg, and the Andaman Islands, all of which may be ignored for the purpose of this inquiry.

§ 4. Provincial governments are an essential feature of all countries which in population or area exceed a certain size. Territories so large as the United States of America, Canada, Australia, South Africa, or India could not indeed be governed without them. But the relations which exist between the central and the provincial governments in these countries are in marked contrast to those which exist in India. Let us take the case of Canada, where the mutual relations of the central and provincial governments are closer than in the United States or Australia, but not so close as in South Africa. The constitution of Canada is fixed by the British North America Act of the Imperial Parliament. It can only be altered by the Imperial Parliament, a fact due to the public opinion, not of the British, but of the Canadian people themselves. Under this Act certain powers and revenues are assigned to provincial governments which derive their authority from the electorates of each province. All other powers and revenues are reserved to the central Government, which can and does supplement the provincial revenues by grants which lie within the discretion of the central parliament. Otherwise the powers and revenues of provincial governments are solely determined by the constitution. The mainspring of the central Government is the Canadian electorate as a whole. The mainsprings of the provincial governments are the provincial electorates. It is a solar system in which each body revolves on its own axis and travels in its own orbit, while the power which keeps them in due relation to each other and the central body is that of the constitution. The planets are each moved by an impetus of their own. They are not impelled by the sun, but by the power of the system in which they revolve. The central government can issue no orders to the provincial governments. They cannot bind them with regulations, and it follows that the officers of the provincial governments are absolutely distinct from those of the central government. In Canada the government at Ottawa is

responsible only for the functions entrusted to it by the British North America Act. The Government at Delhi and Simla is responsible for every detail of government in India. It is this fact which dominates the whole of its relations to the provinces, and which makes those relations so different from those which exist in the countries we have mentioned.

§ 5. The Governor-General-in-Council is responsible, then, for all the functions of government in India. These functions are divisible into two classes. Some of them are administered through departments directly controlled from Delhi and Simla, while others are administered through departments controlled by the provincial governments. To the first category belong the departments which control —

Foreign Affairs.	Geological, Topographical, and Archaeological Surveys.
The Relations with the more important Native States.	Mines.
The Army.	The Northern Indian Salt Revenue Department, which includes not merely the revenue, but the administration of the manufacture of salt.
Indian Finance.	Higher Agricultural Research.
Audit.

¹ The whole revenue from Customs and Opium accrues to the central Government. To its funds the whole public cost of the ecclesiastical establishments are charged. Yet in each province all three departments take their orders from the provincial governments except in large matters

Medical and Sanitary Departments.	Agriculture, including—
Civil Veterinary Department.	(1) Co-operative Credit.
Factory and Boiler Inspection.	(2) Scientific and miscellaneous departments.
Relations with some of the adjacent Native States.	Stationery and Printing.
	Miscellaneous.
	Famine Relief.
	Irrigation.
	Public Works.

The work of all these provincial departments is supervised by the Government of India. In some technical matters, this supervision is exercised on the advice of special departments at Delhi and Simla which are grouped under one or other of the members-in-council. Such advisory or semi-advisory departments are those which deal with—

Agriculture, including Research.	Sanitation.
Civil Veterinary Work.	Public Works.
Education.	Irrigation.
Forestry.	Survey.
Medicine.	Criminal Intelligence.

These departments, however, are not always confined to advising the Government of India. The Agricultural Department conducts research, while the Education Department deals direct with the University of Calcutta.

Provincial finance is supervised by the Finance Department, and provincial accounts are subject to the Auditor-General. Provincial Legislation is supervised by the Legislative Department and wherever provinces are left to handle their own relations with neighbouring native states, they do so subject to the close supervision of the Political Department. In matters other than those specified above provincial governments are supervised by the Home Department, which acts as the special custodian of constitutional usage and practice.

§ 6. The officials, by whom these numerous departments are staffed, are drawn from a number of services. It is necessary to realize that a department is one thing and a of principle. All this shows how completely the provincial governments have been treated and trusted as localized departments of the Government of India. In the U.S.A., Canada, or Australia the collection of customs by provincial or State governments on behalf of the federal government would be unthinkable.

service is another. The services are simply the reservoirs of trained men from which the various departments are staffed.

There are certain divisions which impose themselves on all complex public administrations, the nature of which is easily explained by reference to an army. An army consists not only of a fighting force, but also of a number of technical corps, like the Engineers, the military railway service, the field telegraph service, the medical service, the army service corps, the transport service, and many others. These collateral services are divided, so to speak, from each other by vertical lines. Each separate service, however, is also divided into two principal grades by a horizontal line. Above that line are commissioned officers and below that line are the N.C.O.'s and the rank and file. These services are the reservoirs from which an army is constituted for action in the field. The general staff is composed of superiors drawn from the corps of regimental and technical officers, assisted by subordinates drawn from the rank and file of the various services. The Government of India corresponds to this general staff. The bulk of the army is composed of various army corps in which most or all of the technical services are represented. The Provincial administrations correspond to these army corps. On the other hand there will be certain general departments subject to the direct control of the general staff. There will be a general transport department from the bases to the theatre of war, constituted of officers and men drawn from the transport service. There will be a telegraph department staffed from the telegraph service, and a hospital department staffed from the medical service. These special departments, which are separate from the army corps, correspond to the separate departments under the direct control of the Government of India.

In India there is a general administrative corps, called the Indian Civil Service, which corresponds to the corps of officers in an army, who do not belong to any of the technical services. The I.C.S. is recruited in England and is open to all British subjects, but consists for the most part of Europeans. From this corps officers are posted at the commencement of their service to the various provincial governments, and a few of them may afterwards be drawn from their province into the departments of the Government of India or may become members of the Governor-General's council. Subject to their direction are a much larger number

service is another. The services are simply the reservoirs of trained men from which the various departments are staffed.

There are certain divisions which impose themselves on all complex public administrations, the nature of which is easily explained by reference to an army. An army consists not only of a fighting force, but also of a number of technical corps, like the Engineers, the military railway service, the field telegraph service, the medical service, the army service corps, the transport service, and many others. These collateral services are divided, so to speak, from each other by vertical lines. Each separate service, however, is also divided into two principal grades by a horizontal line. Subject to their direction are a much larger number

Abstract

[illegible]

of officers of inferior rank and subordinates recruited in each province. The vast majority are therefore Indians.

Side by side with the I.C.S. are a number of technical services, consisting of specialists in agriculture, education, forestry, public works, medicine, police, and military work, recruited largely in England, and therefore consisting for the most part of Europeans. From these technical services officers are posted to the departments directly subject to the Government of India, and also to the various provincial departments. In each province they are assisted by a large number of subordinates recruited within the province, who are for the most part Indians. The subordinate officers in the technical departments, directly subject to the Government of India, are partly drawn from these provincial services. In departments like those administering posts and telegraphs there are no correlative provincial services from which to draw, and Indian subordinates are therefore recruited from India at large. By usage, however, they are commonly described as belonging to the 'provincial service' in that department. The superior, inferior, and subordinate grades in all these various services are distinguished as imperial and provincial. The imperial services are the superior grades, recruited in England and mostly consisting of Europeans; the provincial services are inferior grades, recruited in India and mostly consisting of Indians. The terminology would be less misleading if, as in England, the upper grade were described as belonging to the first division, and the lower as belonging to the second division.

The point, however, which it is here desired to emphasize is this, that the officers in each imperial service are freely transferable between departments controlled by the governments of the provinces and those controlled by the Government of India, and occasionally between provinces. This, as noted on a previous page, is a thing which could not possibly happen in countries like the United States of America, Canada, and Australia or South Africa. The services of the Canadian Government, for instance, are just as distinct from those of Ontario or Quebec as they are from those of the Australian Government. It is partly this fact, that the Government of India controls all the services or reservoirs from which its officers are drawn, which enables it to control every detail of Indian administration.

§ 7. There is, as we noticed, no detail of Indian administration which might not conceivably become a Cabinet question in England, and therefore there is no detail of provincial

of officers of inferior rank and subordinates recruited in each province. The vast majority are therefore Indians.

Side by side with the I.C.S. are a number of technical services, consisting of specialists in agriculture, education, forestry, public works, medicine, police, and military work, recruited largely in England, and therefore consisting for the most part of Europeans. From these technical services officers are posted to the departments directly subject to the Government of India, and also to the various provincial departments. In each province they are assisted by a large number of subordinates recruited within the province, who are for the most part Indians. The subordinate officers in the technical departments, directly subject to the Government of India, are partly drawn from these provincial services. In departments like those administering posts and telegraphs there are no correlative provincial services from which to draw, and Indian subordinates are therefore recruited from India at large. By usage, however, they are commonly described as belonging to the 'provincial service' in that department. The superior, inferior, and subordinate grades in all these various services are distinguished as imperial and provincial. The imperial services are the superior grades, recruited in England and mostly consisting of Europeans; the provincial services are inferior grades, recruited in India and mostly consisting of Indians. The terminology would be less misleading if, as in England, the upper grade were described as belonging to the first division, and the lower as belonging to the second division.

The point, however, which it is here desired to emphasize is this, that the officers in each imperial service are freely transferable between departments controlled by the governments of the provinces and those controlled by the Government of India, and occasionally between provinces. This, as noted on a previous page, is a thing which could not possibly happen in countries like the United States of America, Canada, and Australia or South Africa. The services of the Canadian Government, for instance, are just as distinct from those of Ontario or Quebec as they are from those of the Australian Government. It is partly this fact, that the Government of India controls all the services or reservoirs from which its officers are drawn, which enables it to control every detail of Indian administration.

§ 7. There is, as we noticed, no detail of Indian administration which might not conceivably become a Cabinet question in England, and therefore there is no detail of provincial

administration in which their agent, the Government of India, might not at any moment interfere. A case in point was the question whether the lavatory of a mosque at Cawnpore should not be removed to make way for a road which was actually under the supervision of the municipality of Cawnpore. In this case the question having occasioned an agitation beyond the limits of the province the Governor-General came to Cawnpore and settled the point at issue in person. The case, however, is an extreme one.

Orders issued from Delhi and Simla to provincial governments are orders of the Government of India ; but it does not follow that they have come before the Governor-General-in-Council. On routine matters the orders will be issued by an under secretary or assistant secretary. Others he will pass on to the secretary, who will decide some of them, referring the rest to his member of council. Most of the important cases are, in fact, decided by the member of council. A few of the more anxious questions the member will refer to the Governor-General. Such cases may then be decided by the Governor-General, or else referred to the whole executive council. In practice a provincial government can usually insist that a case, however small, shall be referred to the Governor-General-in-Council for decision. A provincial government cannot be censured without the matter coming before the council ; and the council itself must decide any dispute as to orders which may arise between two of its own members.

From time to time the principles underlying decisions made by the Government of India are embodied in permanent regulations intended to govern all similar cases in the future. Decisions, in fact, are treated like the verdicts of courts, and are crystallized into codes of administrative case law based on established principles. This, as a rule, is only done when a number of similar cases have been referred to the Government of India for orders. One object of this practice is to make administrative principles intelligible to a host of subordinate officers scattered throughout India. Another object is to enable provincial governments to dispose of as many cases as possible in accordance with codified precedent, and without reference to the Government of India. But in some cases, notably that of the Public Works Department, the rules have grown so numerous and complex that Provincial departments have constantly to appeal to the Government of India to interpret them, and so the means defeat the end.

§ 8. We have now seen how the various functions of government are assigned to the various departments, national and provincial, how the latter are controlled by the former, and how these numerous departments are staffed. We have next to inquire how the cost of the administration is defrayed.

The revenues of India can be separated into two classes. First there are those derived from India as a whole, which cannot be located to any particular province. To this class belong the revenues from

Opium.	Posts and Telegraphs.
Salt.	The Mint.
Customs.	* Railways.

Secondly come revenues, the production of which can be located to one or other of the provinces. To this category belongs the revenue produced by

Land.	Ports and Pilotage.
Provincial Rates.	Education.
Stamps (on Legal Documents).	Medical Departments.
Excise.	Agricultural Departments.
Assessed Taxes.	Scientific and Miscellaneous Departments.
Forests.	Superannuation Receipts.
Registration.	Stationery and Printing.
Interest on Local Loans.	Miscellaneous.
Courts of Law.	Major Irrigation Works.
Jails.	Minor Irrigation Works.
Police.	Civil Works.

The taxes, by which some of these revenues are raised, are imposed by measures framed by the Government of India and passed by the Legislative Council of the Governor-General. There are certain exceptions to this rule, e. g. the excise laws and provincial rates. Their terms are approved in detail by the Government of India, but they are passed by the legislative councils of the provinces. A provincial government may not impose taxation or make any fundamental change in an existing revenue system without the previous sanction of the Government of India.

On the other hand nearly all the revenues yielded by taxation, and some others, like those from opium and irrigation, are collected by the provincial governments for the Government of India and under its supervision.

§ 9. Formerly the whole of these revenues were paid to the account of the Government of India, which then doled

out to the provincial governments whatever sums each of them could wring from it to meet the cost of their local administrations.

The evils of this system were obvious, and from 1870, the time of Lord Mayo, a series of attempts have been made to remedy it by assigning to the various provinces definite revenues or shares of revenues raised within their areas and proportioned to their needs as gauged by the experience of a number of years. The result was a series of complicated contracts made by the Imperial Government on one side with the several provincial governments on the other. These contracts are revised from time to time and their character becomes more permanent with each revision. For the purpose of this inquiry it will suffice to deal with the present position.

The Government of India retains for its own use all the revenues which cannot be allocated to any provincial area. These revenues, however, do not suffice for its needs and it therefore takes a proportion of certain revenues produced within the limits of each provincial area, which appear on the second list. The arrangements differ and are therefore embodied in separate contracts with each province.

But the money supplied by the share in their local revenues reserved to the provinces is not the only money which the provincial government has to spend. The Government of India has also contracted to contribute a share of the money spent by the provincial government on some departments. As the Government of India takes half the revenue yielded by stamps, so it contributes half the cost of collecting that revenue. Sometimes, as in the case of opium, where the Government of India takes the whole of the revenue, it contributes to the provincial government the whole cost of collecting the revenue. In at least one other case it entrusts a purely spending department to the provincial government and furnishes the whole cost from Imperial revenues. The Ecclesiastical Department is a case in point. The provincial government administers ecclesiastical affairs within its area. The charges appear on its estimates. They are defrayed, however, by a grant from the Government of India. The following table is designed to show the effect of these contracts on each item of revenue and expenditure in each province. It is based upon the schedules to a resolution of the Government of India of July 24, 1916, No. 361-E.A. Those schedules contain a mass of detail referring to very small amounts of revenue and expenditure in various

Abstract

out to the provincial governments whatever sums each of them could wring from it to meet the cost of their local administrations.

The evils of this system were obvious, and from 1870, the time of Lord Mayo, a series of attempts have been made to remedy it by assigning to the various provinces definite revenues or shares of revenues raised within their areas and proportioned to their needs as gauged by the experience of a number of years. The result was a series of complicated contracts made by the Imperial Government on one side with the several provincial governments on the other. These contracts are revised from time to time and their character becomes more permanent with each revision. For the purpose of this inquiry it will suffice to deal with the present position.

The Government of India retains for its own use all the revenues which cannot be allocated to any provincial area. These revenues, however, do not suffice for its needs and it therefore takes a proportion of certain revenues produced within the limits of each provincial area, which appear on the second list. The arrangements differ and are therefore embodied in separate contracts with each province.

But the money supplied by the share in their local revenues reserved to the provinces is not the only money which the provincial government has to spend. The Government of India has also contracted to contribute a share of the money spent by the provincial government on some departments. As the Government of India takes half the revenue yielded by stamps, so it contributes half the cost of collecting that revenue. Sometimes, as in the case of opium, where the Government of India takes the whole of the revenue, it contributes to the provincial government the whole cost of collecting the revenue. In at least one other case it entrusts a purely spending department to the provincial government and furnishes the whole cost from Imperial revenues. The Ecclesiastical Department is a case in point. The provincial government administers ecclesiastical affairs within its area. The charges appear on its estimates. They are defrayed, however, by a grant from the Government of India. The following table is designed to show the effect of these contracts on each item of revenue and expenditure in each province. It is based upon the schedules to a resolution of the Government of India of July 24, 1916, No. 361-E.A. Those schedules contain a mass of detail referring to very small amounts of revenue and expenditure in various

provinces, but in order not to obscure the table, some of these details have been ignored.

§ 10. The foregoing account of these contracts, however, is not complete. These highly complicated bargains relating to a long series of items of revenue and expenditure were hammered out between the Government of India and the governments of each province. Upon each item an agreement was arrived at, in some cases no doubt with considerable difficulty. When, however, the net result of these agreements was worked out in figures it was always found that they yielded either less or more than the province actually required. Agreements so detailed could scarcely be expected to yield the exact sum required to meet the cost of all the departments administered by each provincial government. It might be more or it might be less. If it was more the provincial government was made liable to the Government of India for a lump sum representing the difference. If it was less the Government of India undertook to grant a lump sum to the provincial government equal to the difference. These lump sums were called fixed assignments. In some cases they were due to the Government of India from the province and in others vice versa. To take one case for illustration, the United Provinces were made liable for a fixed assignment of Rs. 15,38,000 payable to the Government of India. This fixed assignment is part of the original contract.

From time to time minor adjustments are made between the province and the Government of India. The Government of the United Provinces, for instance, was made liable to the Government of India for Rs. 67,000 annually on account of a 'charge made in the classification of the charges of the Public Works Section of the Account Office'. It was further made liable for Rs. 4,30,000 'in connexion with the new scheme of taxation'. These sums are added to the fixed assignment due from the United Provinces to the Government of India, making Rs. 20,35,000 in all.

On the other hand there are two classes of deductions which are made from the fixed assignment and other charges due from the province to the Government of India, which gradually mount up until, on the total, the Government of India becomes liable for a transfer of revenue to the province. An example of the first class is a sum of Rs. 36,000 annually paid by the Government of India to the United Provinces to compensate Provincial revenues for the loss occasioned

* Less receipts for Protective Irrigation Works in the United Provinces.

by the reduction of the Excise duty on issues of rum to troops from distilleries'.

§ 11. The second class of deductions in favour of the province are far more important. From time to time the Government of India, finding it has revenues to spare, agrees to make an annual contribution to the province in aid of some particular purpose like education, irrigation, sanitation, or police. These contributions are often referred to as doles.

In the United Provinces the sums due to the provincial government under these two classes have now mounted up to no less than Rs. 63,22,000, thereby wiping out the Rs. 20,35,000 due from the province and leaving a sum of Rs. 42,87,000 due to the province from the Government of India. On the estimates of the United Provinces this sum is correctly described as 'Transfers between Imperial and Provincial revenues and receipts'.

A similar item appears in the estimates of all the other provinces. Even where, as in the United Provinces, the original fixed assignment was a sum due from the province to the Government of India, the accretion of recurring doles from the Government of India has wiped it out and has established a net balance in favour of the province.

It would not be necessary to weary the reader with all this detail if it were not that the term 'fixed assignment' has been transferred to the balance which now in every case is in favour of the province. A Resolution of the Government of India, dated May 18, 1912, No. 27-F. speaks of 'the desirability of converting overgrown fixed assignments into shares of growing revenue'. The so-called 'fixed assignment' grows with every new dole meted out by the Government of India to the provinces. The idea is to reduce this lump sum from time to time and to make a corresponding increase in the provincial share of one of the divided revenues. The settlements cannot, therefore, be regarded as final, and are justly described as quasi-permanent.

§ 12. The money spent on the various departments administered by provincial governments is thus drawn from three sources—

- (1) The whole or a portion of various items of revenue produced within the area of each province.
- (2) Subsidies from the Government of India calculated to meet the whole or a certain proportion of the cost

by the reduction of the Excise duty on issues of rum to troops from distilleries'.

§ 11. The second class of deductions in favour of the province are far more important. From time to time the Government of India, finding it has revenues to spare, agrees to make an annual contribution to the province in aid of some particular purpose like education, irrigation, sanitation, or police. These contributions are often referred to as doles.

In the United Provinces the sums due to the provincial government under these two classes have now mounted up to no less than Rs. 63,22,000, thereby wiping out the Rs. 20,35,000 due from the province and leaving a sum of Rs. 42,87,000 due to the province from the Government of India. On the estimates of the United Provinces this sum is correctly described as 'Transfers between Imperial and Provincial revenues and receipts'.

A similar item appears in the estimates of all the other provinces. Even where, as in the United Provinces, the original fixed assignment was a sum due from the province to the Government of India, the accretion of recurring doles from the Government of India has wiped it out and has established a net balance in favour of the province.

It would not be necessary to weary the reader with all this detail if it were not that the term 'fixed assignment' has been transferred to the balance which now in every case is in favour of the province. A Resolution of the Government of India, dated May 18, 1912, No. 27-F. speaks of 'the desirability of converting overgrown fixed assignments into shares of growing revenue'. The so-called 'fixed assignment' grows with every new dole meted out by the Government of India to the provinces. The idea is to reduce this lump sum from time to time and to make a corresponding increase in the provincial share of one of the divided revenues. The settlements cannot, therefore, be regarded as final, and are justly described as quasi-permanent.

§ 12. The money spent on the various departments administered by provincial governments is thus drawn from three sources—

- (1) The whole or a portion of various items of revenue produced within the area of each province.
- (2) Subsidies from the Government of India calculated to meet the whole or a certain proportion of the cost

of certain departments administered by the provincial government.

(3) A lump sum, called the fixed assignment.

In addition to the money which each province is entitled to expect from these sources there is always the provincial balance, which represents savings from previous years.

§ 13. In framing his estimates for the coming year the Financial Secretary of the province first submits to the Government of India estimates both of income and expenditure under the various heads. The Government of India then fixes the total expenditure in the first edition of the budget. But the province sends up a second and third or final edition upon which it is entitled to make further representations. The Government of India frequently alters the provincial estimates, especially those of income, before it sanctions them. If the provincial balance is well above a certain prescribed minimum the Financial Secretary for the province may be allowed to budget for expenditure in excess of revenue, the deficit being met from the provincial balance.

If, on the other hand, the provincial balance has fallen to a figure dangerously near the minimum prescribed, the Financial Secretary of the province may be ordered to budget for expenditure which is less than revenue, the surplus being used to fortify the provincial balance and raise it above the prescribed minimum regarded as the danger point. The total expenditure having been authorized on these lines the Financial Secretary then sees how much of it can be allotted to each department, and frames his budget accordingly. Except in the case of famine, for which there are special arrangements, his expenditure must be bounded by the revenues specified in the contracts, and brought within a figure prescribed to him each year by the Government of India. The growth of expenditure in a province is limited by the growth of its scheduled revenues. Their expansion may be fostered by administrative wisdom and foresight and by careful collection. Otherwise they cannot be increased and no new taxes can be added except by the Government of India, or with its consent.

Finally it must be noted that provincial governments are not permitted to borrow on the open market. Any monies required for capital expenditure must be borrowed from the Government of India.

CHICAGO, ILL., MAY 14, 1917

TO THE EDITOR:

I have the honor to acknowledge the receipt of your letter of the 10th inst.

and in reply to inform you that the same has been forwarded to the

proper authorities for their consideration.

I am, Sir, very respectfully,
Yours truly,
J. H. HARRIS, Secretary.

(3) A lump sum, called the fixed assignment.

In addition to the money which each province is entitled to expect from these sources there is always the provincial balance, which represents savings from previous years.

§ 13. In framing his estimates for the coming year the Financial Secretary of the province first submits to the Government of India estimates both of income and expenditure under the various heads. The Government of India then fixes the total expenditure in the first edition of the budget. But the province sends up a second and third or final edition upon which it is entitled to make further representations. The Government of India frequently alters the provincial estimates, especially those of income, before it sanctions them. If the provincial balance is well above a certain prescribed minimum the Financial Secretary for the province may be allowed to budget for expenditure in excess of revenue, the deficit being met from the provincial balance.

If, on the other hand, the provincial balance has fallen to a figure dangerously near the minimum prescribed, the Financial Secretary of the province may be ordered to budget for expenditure which is less than revenue, the surplus being used to fortify the provincial balance and raise it above the prescribed minimum regarded as the danger point. The total expenditure having been authorized on these lines the Financial Secretary then sees how much of it can be allotted to each department, and frames his budget accordingly. Except in the case of famine, for which there are special arrangements, his expenditure must be bounded by the revenues specified in the contracts, and brought within a figure prescribed to him each year by the Government of India. The growth of expenditure in a province is limited by the growth of its scheduled revenues. Their expansion may be fostered by administrative wisdom and foresight and by careful collection. Otherwise they cannot be increased and no new taxes can be added except by the Government of India, or with its consent.

Finally it must be noted that provincial governments are not permitted to borrow on the open market. Any monies required for capital expenditure must be borrowed from the Government of India.

(b) THE GOVERNMENT OF THE UNITED PROVINCES

§ 14. The provincial governments while differing in details have all been constructed on a common plan. It will be best, therefore, to describe one of them, leaving the reader who desires to pursue the subject farther to discover for himself how far the other provinces differ from the one selected for description. For this purpose we propose to take the United Provinces of Agra and Oudh. It is true of course that this province is still governed by a single official, and not like one of the older Presidencies by a Governor-in-Council. This, however, is something of an accident, for a measure has actually been framed and submitted to Parliament for assimilating the Government of the United Provinces to those of the Presidencies. The fact that no council has yet been established in the United Provinces is merely due to the circumstance that the measure in question was blocked by the House of Lords.

In passing it is necessary to note that the Lieutenant-Governor controls the relations of his province with the native states of Tehri, Rampur, and Benares, for the reason that these states are surrounded by the territories of the province, or in close proximity thereto.

The United Provinces has a population of about 48,000,000, the largest of any province in India, larger than that of the British Isles. Socially it is the most central of all the provinces and also the most complex. It is, as Sir Alfred Lyall called it, the heart of India.

§ 15. In the cold weather the Lieutenant-Governor divides his time between Allahabad and Lucknow, the capital of Oudh, and on tours in his province. In the hot weather he moves with his principal officers to the hill station of Naini Tal.

§ 16. In matters of 'revenue' the Lieutenant-Governor is assisted by the Board of Revenue. A word of warning must here be uttered for the benefit of the unwary. Our able and scholarly countrymen who rule India relieve the monotony of their lives by devising verbal booby-traps for their visitors. One is the letter 'a'. The moment he enters India, the modern Herodotus puts his foot straight into it. This particular snare was devised by the ingenuity of a great civilian. Sir William Hunter observed that in English the letter 'a' is sometimes pronounced as if it was 'ur' as at the end of Canada. Ignoring the fact that it never has

this value when followed by a consonant, he induced the Government of India to ordain that in Indian names the first vowel of our alphabet should have the value usually given by English throats to the last. Thus the places pronounced Ulwar and Umbala, and formerly so spelt, are, by edict of the Government of India, spelt Alwar and Ambala, though their nerve failed them when they came to the case of the arsenal which is still spelt and pronounced Dum-Dum. Otherwise the map of India is strewn with shibboleths whereby dwellers from over the water bewray themselves the moment their lips attempt to pronounce the letter 'a'.

The commonest form this habit takes is that of giving to simple words like 'revenue' specialized meanings they nowhere else possess; though this, to speak seriously, is due to history rather than to a latent sense of humour in that most solemn of British creations, the Government of India. The foundations of British dominion were laid when Clive acquired for the East India Company the right to collect the revenues of Bengal, Behar, and Orissa. Collectors were appointed for the purpose, but experience proved that in order to collect revenue it was also necessary to provide for the welfare of the people and the development of the sources from which revenue was derived. The mere collection of the revenues soon became automatic and gave the collectors no trouble. On the other hand his duties connected with agrarian administration steadily developed. 'A good revenue officer' in Indian administrative parlance is one who knows the agricultural conditions of his district, sees to the prompt and efficient disposal of cases of an agrarian nature, keeps his land records accurately posted and up-to-date, and takes steps to minimize and prevent famine, as well as to collect the revenue. When an Indian civilian speaks of 'revenue' he means least and last anything which Dr. Johnson would have laid to the account of that word. In Anglo-Indian parlance it denotes agrarian and general administration.

§ 17. The revenue, financial and judicial, branches are three aspects which together compose the administrative unity of provincial government. The Board of Revenue is responsible through the Chief Secretary to the Lieutenant-Governor for the first of these branches. It exercises a general control over commissioners, collectors, and their subordinates. It acts as the appellate court for rent and revenue. It manages government estates; and, as Court of

Wards, is the biggest zamindar in the Province. It is chief revenue authority for excise, and deals with opium and other taxes. In pursuance of these duties the Board tours the province, and inspects its offices and buildings. By the rural masses it is viewed with almost the same regard as the government, and, in the absence of the Lieutenant-Governor from the province, its senior member would ordinarily expect to act in his place, unless some one else is specially appointed by the Government of India.

§ 18. The Lieutenant-Governor is assisted by three principal secretaries, the Chief Secretary, referred to above, the Financial Secretary, and the Judicial Secretary, over whose signatures the decisions of the provincial government are usually notified to the heads of executive departments and other officials. These officers with their central establishments and their head-quarters at Allahabad, Lucknow, and Naini Tal, figure in the estimates under the heading of 'General Administration'. The Lieutenant-Governor has also two secretaries in the Public Works Department—one for irrigation and the other for buildings, roads and railways.

§ 19. The heads of executive departments include officers like the Inspector-General of Police, the Inspector-General of Registration, the Inspector-General of Civil Hospitals, the Inspector-General of Prisons, the Director of Public Instruction, and the Director of Agriculture. It must not be inferred that such officers are subordinate to the three principal secretaries. Normally their instructions will come to them through one of the secretaries. The Judicial Secretary, for instance, is the normal channel through which the Inspector-General of Police will receive his orders. The Inspector-General, however, can refer those orders back to the Lieutenant-Governor, can write to him, see him, and obtain his orders direct from the head of the Government.

The three principal secretaries are always members of the I.C.S. So often is the Inspector-General of Police and sometimes the head of technical departments, such as agriculture.

§ 20. The Board of Revenue is assisted by ten commissioners, senior members of the I.C.S. each in charge of a division. Each division contains from three to six districts. The districts are the essential administrative units of the province. We must deal at length with the duties of the officers in charge of them, and then return to discuss the commissioners.

§ 21. There are forty-eight districts in the United Provinces, each containing on the average a million souls. The district

officer is usually a member of the I.C.S. The district is divided into sub-divisions (consisting of one or two tahsils), each in charge of sub-divisional officers, styled Assistant Magistrates, who are usually members of the I.C.S., and deputy collectors drawn from the Provincial service. Of these sub-divisional officers the senior is joint magistrate—the right hand man of the district officer. He is usually in charge of *sadr tahsil*, the sub-division which includes the administrative centre of the district. These assistant magistrates and deputy collectors have legal powers as ‘magistrates’ and ‘assistant collectors’ of the first class, and in practice take up all cases arising in their sub-division which cannot under the law be decided by officers with less extensive powers, e. g. members of the I.C.S. and of the provincial services under training, tahsildars and honorary magistrates. To a great extent these officers are to the sub-division what the district officer is to the district. Next in order of precedence comes the tahsildar, a member of the Indian Subordinate Service with lower powers: he is primarily responsible for the collection of the land revenue.

§ 22. In passing we may note that the cash collected is placed in the treasury for which the district officer is responsible, and from which government payments are made. Where the branch of a Presidency bank is available it is used as a treasury. But in India banks are few and far between, and in most districts the treasury takes the form of a huge and primitive strong box fixed in the ground. The Government of India regulates the distribution of available revenue by moving cash from districts where it is in excess of payments to the treasuries of those where payments exceed the cash available.

§ 23. So far as possible tahsils are grouped round the town chosen as the administrative centre of the district, like the petals of a rose. The district officer can thus control them all from that centre with equal facility. The tahsildar is stationed in the centre of the tahsil at its principal town.

§ 24. The tahsil is again divided into *parganas*, supervised by *kanungos*, whose duty it is to inspect and verify the work of the *patwaris*, each of whom is responsible for compiling the data upon which the land revenue is assessed in a *patwari circle*. These circles include the villages. Here at last we come to the natural unit of Indian society, the corpuscle made of human atoms, from which the body politic of India is composed. Of the Indian village we shall have more to say when we come to discuss the question of land revenue in V.

The first of these was the question of the right of the states to secede from the Union. This question was raised in 1861 when South Carolina seceded from the Union. The Union responded by force, and the Civil War began. The question of secession was finally settled by the Supreme Court in 1869 in the case of *Texas v. White*. The Court held that the states are not sovereign and cannot secede from the Union. This decision was a major victory for the Union and helped to preserve the integrity of the nation.

The second of these questions was the question of the right of the states to nullify federal laws. This question was raised in 1803 when South Carolina nullified a federal tariff law. The Union responded by force, and the Civil War began. The question of nullification was finally settled by the Supreme Court in 1857 in the case of *Nullification of Federal Laws*. The Court held that the states cannot nullify federal laws. This decision was a major victory for the Union and helped to preserve the integrity of the nation.

The third of these questions was the question of the right of the states to tax federal property. This question was raised in 1820 when South Carolina taxed federal property. The Union responded by force, and the Civil War began. The question of taxation was finally settled by the Supreme Court in 1857 in the case of *South Carolina v. United States*. The Court held that the states cannot tax federal property. This decision was a major victory for the Union and helped to preserve the integrity of the nation.

The fourth of these questions was the question of the right of the states to regulate commerce. This question was raised in 1820 when South Carolina regulated commerce. The Union responded by force, and the Civil War began. The question of regulation was finally settled by the Supreme Court in 1857 in the case of *South Carolina v. United States*. The Court held that the states cannot regulate commerce. This decision was a major victory for the Union and helped to preserve the integrity of the nation.

The fifth of these questions was the question of the right of the states to regulate the press. This question was raised in 1820 when South Carolina regulated the press. The Union responded by force, and the Civil War began. The question of regulation was finally settled by the Supreme Court in 1857 in the case of *South Carolina v. United States*. The Court held that the states cannot regulate the press. This decision was a major victory for the Union and helped to preserve the integrity of the nation.

officer is usually a member of the I.C.S. The district is divided into sub-divisions (consisting of one or two tahsils), each in charge of sub-divisional officers, styled Assistant Magistrates, who are usually members of the I.C.S., and deputy collectors drawn from the Provincial service. Of these sub-divisional officers the senior is joint magistrate—the right hand man of the district officer. He is usually in charge of *sadr tahsil*, the sub-division which includes the administrative centre of the district. These assistant magistrates and deputy collectors have legal powers as ‘magistrates’ and ‘assistant collectors’ of the first class, and in practice take up all cases arising in their sub-division which cannot under the law be decided by officers with less extensive powers, e. g. members of the I.C.S. and of the provincial services under training, tahsildars and honorary magistrates. To a great extent these officers are to the sub-division what the district officer is to the district. Next in order of precedence comes the tahsildar, a member of the Indian Subordinate Service with lower powers: he is primarily responsible for the collection of the land revenue.

§ 22. In passing we may note that the cash collected is placed in the treasury for which the district officer is responsible, and from which government payments are made. Where the branch of a Presidency bank is available it is used as a treasury. But in India banks are few and far between, and in most districts the treasury takes the form of a huge and primitive strong box fixed in the ground. The Government of India regulates the distribution of available revenue by moving cash from districts where it is in excess of payments to the treasuries of those where payments exceed the cash available.

§ 23. So far as possible tahsils are grouped round the town chosen as the administrative centre of the district, like the petals of a rose. The district officer can thus control them all from that centre with equal facility. The tahsildar is stationed in the centre of the tahsil at its principal town.

§ 24. The tahsil is again divided into *parganas*, supervised by *kanungos*, whose duty it is to inspect and verify the work of the *patwaris*, each of whom is responsible for compiling the data upon which the land revenue is assessed in a *patwari circle*. These circles include the villages. Here at last we come to the natural unit of Indian society, the corpuscle made of human atoms, from which the body politic of India is composed. Of the Indian village we shall have more to say when we come to discuss the question of land revenue in V.

§ 25. This district organization is roughly comparable to a regiment of which the district officer is a colonel, and his officers the assistant magistrates and deputy collectors. Of these the joint magistrate is a kind of adjutant. The tahsildars are the sergeants and the kanungos the corporals.

§ 26. It must throughout be realized that the district officer combines in his person the judicial office of magistrate, in which capacity he is head of the police, with the administrative functions of collector. Very many years ago, the two offices were separated, but the arrangement was found unsatisfactory in practice. The appointment of a joint magistrate was originally an attempt to meet the difficulty, but the compromise was illogical and that officer is now merely *primus inter pares*. He and his colleagues, the assistant magistrates and deputy collectors, are each to their sub-divisions what the district officer is to his district. Like him they combine judicial with administrative functions; and so also does the tahsildar. The joint magistrate as an embryo collector is better educated than his colleagues and as such is entrusted with the more troublesome cases. But the name of his office is merely the echo down the corridors of time of a well-intentioned failure.

§ 27. This arrangement by which administrative officers controlling the police discharge judicial functions dates from 1843. It was made after forty years' experiment and was largely dictated by economy. Though contrary to British theory and practice it has practical advantages. In the past it has enabled district magistrates with their command of independent sources of information to prevent much police oppression that might otherwise have flourished, and, as in many other departments, to turn the hose of common sense on to some pet project of departmentalism. It is not so necessary now that a much better stamp of officer is entering the police department, and government has larger revenues at its disposal.

§ 28. The duties of district officer may now be summarized as follows: as the officers responsible for public security he and his subordinates control the police. As magistrates they decide criminal cases.

As the collector responsible for land revenue he and his subordinates control agrarian and general administration, and decide 'revenue' cases, i.e., those arising from the laws governing the relations of landlord and tenant.

As collector he and his subordinates receive revenue from

§ 25. This district organization is roughly comparable to a regiment of which the district officer is a colonel, and his officers the assistant magistrates and deputy collectors. Of these the joint magistrate is a kind of adjutant. The tahsildars are the sergeants and the kanungos the corporals.

Abstract

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Abstract—The purpose of this study was to determine whether there were differences in the prevalence of musculoskeletal disorders between two groups of female nurses working in different departments of a hospital. The subjects were divided into two groups according to their work environment: intensive care unit (ICU) and general ward. A questionnaire was sent to all subjects, asking them to report any musculoskeletal symptoms they had experienced during the last year. The results showed that the prevalence of musculoskeletal disorders was significantly higher among ICU nurses than among general ward nurses. This finding suggests that the physical demands of ICU nursing are more likely to lead to musculoskeletal problems than those of general ward nursing.

other sources, such as excise stamps, income tax, and rents from government properties. As magistrates they decide cases arising out of the violation of laws relating to those subjects.

For reasons of economy they are the residuary legatees of all functions for which no other provision has been made. In this capacity the collector and his subordinates deal with local self-government, the Court of Wards, trust properties, and government estates.

§ 29. Let us deal first with public security. The superintendent of police is in theory the district officer's assistant, and many of his orders require the district officer's sanction. He can prevent the police from bringing a case into court; but when once it has come into court it can only be withdrawn with the sanction of the legal remembrancer of the provincial government. The district and sub-divisional officers can all take action to forestall disorder by binding suspicious characters over to be of good behaviour.

Trials for more serious offences are held exclusively in the courts of magistrates of the first class. In the most serious cases they have to commit for trial before the Court of Sessions, which exercises the functions of both the quarter sessions and the assizes in England. If a first class magistrate convicts there is an appeal to the sessions judge, a purely judicial officer and entirely independent of the district magistrate. From the sessions judge a further appeal lies to the High Court. It is only appeals from convictions by second or third class magistrates that lie to the district or sub-divisional officers. The district officer himself seldom tries an original case, nor as a rule interferes with the distribution of cases as between magistrates which is settled on a general plan fixed by himself. He may, however, be moved by a party to transfer a case from one subordinate court to another on the ground of convenience of parties or witnesses, or on the ground of some supposed bias in the mind of the court to which it would otherwise go; or on finding the work in a particular court is congested, he may of his own motion or on the representation of that court, transfer a pending case to another. Only in a case of special importance or difficulty will he remove a case from the court of the ordinary officer to another which he may think more competent to deal with it. He has before him a daily return of the original cases dealt with by his subordinates, and can send for the records and advise any one of them whose decision he thinks to

be questionable. He can thus gauge the capacity of his subordinates and keep them up to the mark.

§ 30. We have next to deal with his work in connexion with agrarian and general administration. In the hot weather when the rains confine him to his head-quarters the bulk of his time is devoted to judicial work. In the cold weather, when he tours the district, the claims of administrative work predominate. The details are, of course, done by subordinates. His functions largely consist in training them, inspecting their work and checking the details; and all this keeps him in touch with the actual facts. For the sake of brevity the duties to be done will be spoken of as those of the collector himself.

His original function, the collection of land revenue, is only rendered possible by a highly elaborate system of registration of the actual owners of land and the revenue for the payment of which they are responsible. Estates are often held by a numerous proprietary body, which in some cases includes many thousands. A permanent staff is required to keep these registers up to date. As most of the land is cultivated by tenants, it is evident that the owners cannot pay their land revenue unless they are themselves paid their rents. The payment of rents is rendered possible by agricultural prosperity, one of the factors in which is protection of tenants from arbitrary exactions or excessive rack-renting. Hence the accurate registration of tenants, holdings, rents, and rights has become necessary, and also the enactment of agrarian legislation laying down the rights of all persons interested in the land.

These land records are maintained by the village accountant or patwari. His duty is merely to record rights and facts, and keep the surveys of the villages in his circle up to date. For the records include a plan of every field showing its boundaries, and such details as water-supply and the nature of the soil. This work is supervised by the kanungos, who are in turn supervised by the tahsildars, assistant and deputy collectors and finally by the collector himself. These officers visit the villages, assemble the villagers, call for the patwaris' records, and verify the entries by asking the individual owner or cultivator for information with regard to particular fields. To the best of their powers they make the tahsildars, kanungos, and patwaris feel that no negligence or corruption can escape their notice. This constant supervision is not only necessary for the just decision of a vast body of agrarian litigation,

To the best of their powers they make the tahsildars, kanungos, and patwaris feel that no negligence or corruption can escape their notice. This constant supervision is not only necessary for the just decision of a vast body of agrarian litigation,

but brings the officials, and especially the junior members of the I.C.S., into intimate touch with the inhabitants of the most remote villages.¹ It is a factor of immense importance in maintaining the contentment and prosperity of the countryside. The collector trains his subordinates in this work and sees that they do it thoroughly.

The agrarian litigation above referred to is dealt with by 'Revenue' Courts. Two grades of courts, namely, the court of the tahsildars, and the courts of assistant and deputy collectors have original jurisdiction. Appeals are heard by collectors, commissioners, and the Board of Revenue, which last constitutes the ultimate court of appeal in 'revenue' matters.

§ 31. In the early days of Indian administration the collector had himself to provide for such matters as police, jails, forests, medicine, sanitation, public works, and education. For these functions, however, special departments were gradually organized; but the collector is still expected to oversee their activities in his district. He does not interfere with technical details as a rule. He is, however, concerned with general schemes for new projects in his district. He is also the officer to whom the people

¹ In framing this account I am of course drawing on information generously furnished by the overworked men who discharge these multifarious duties. I think they would wish me not to withhold the following observation noted on these words by an educated Indian resident in the United Provinces. It is well to remember that our mispronunciation of their language must often give Indians the same sense of absurdity as their mispronunciation of English sometimes gives us. On the whole it is probably true that educated Indians are far better masters of our language than we are of theirs. If this page should chance to meet the eye of the author of the following comment, he will perhaps allow me to point out that the fault he finds with junior members of the I.C.S. fresh from England is incidental to the situation in which they are placed. Their knowledge of the language and people must be imperfect, though villagers can hardly be expected to appreciate the fact.

The comment in question is as follows:

'I submit that the contact is not intimate but very superficial for the following reasons:

'(1) The junior members of the I.C.S. have a very imperfect knowledge of the language of the people. Even those who have a fair knowledge of the language can rarely pronounce Indian words correctly, and it is seldom that a villager can properly understand them.

'(2) The villagers hardly ever speak to them freely. They are afraid of doing so. I know of instances in which people in much better position have come to grief by speaking to them freely. The villagers know of such cases or otherwise believe that it is not safe to speak freely.

'(3) I believe that many junior members of the I.C.S. are by temperament not fitted to understand the people.'

The first of these is the fact that the majority of the specimens of the new species are from the same locality, and that they are all of the same size and shape. This is a very unusual occurrence, and it is therefore probable that the new species is a new subspecies of the genus. The second fact is that the new species is found in a very restricted area, and it is therefore probable that it is a new subspecies of the genus. The third fact is that the new species is found in a very restricted area, and it is therefore probable that it is a new subspecies of the genus.

The new species is found in a very restricted area, and it is therefore probable that it is a new subspecies of the genus. The new species is found in a very restricted area, and it is therefore probable that it is a new subspecies of the genus. address any grievances or proposals regarding the working of any department. Throughout India the head of the government has always been expected personally to make himself accessible to every subject. In theory the poorest could approach and lay any petition he wished at the feet of the Emperor in the days of Akbar. The same custom continues to-day. Every day, wherever the collector is, there is three times proclaimed the petition hour, the *Magna Carta* of India; and when the collector is on tour, the senior deputy collector acts for him at *sadr*. Every man, woman, and child throughout India knows that at that moment he can get the personal attention of the representative of the head of the government, and that every official who receives that petition forwarded through the collector's court will pay reasonably prompt and adequate attention to it; because behind the seal of the collector's court stands the collector's power of supervision and report over other departments. This is no eastern fairy story. Men, women, and children do come singly and in bodies, and their requests cover the most extraordinary variety of subjects.

§ 32. A word must also be added as to the collector's duties in times of famine. In India the people are normally supported on the produce of the locality in which they live. Under the peaceful conditions secured by British administration, the population is limited only by the normal capacity of the district for production. Whenever, therefore, the rains or crops fail, the people are threatened by famine. A state of famine is deemed to exist whenever relief works have to be started. The collector has to advise the government how far to insure against failure of rain, by storing water and irrigating areas sufficient to provide the district with food enough to carry the people through seasons of scarcity. How this is to be done is of course a question for the Public Works Department. He must also suggest what railways are needed for the importation of grain, and what roads for distributing it throughout the district. Nowadays famine does not imply lack of food, for owing to the vast production on huge irrigation schemes such as those of the Punjab and Ganges Valley, there is always enough for everybody somewhere. Thanks to railways it finds its way to the place where it is wanted, in the natural course of trade. 'Famine' now means merely 'lack of agricultural employment'; and the district officer's problem is to provide some other employment as a substitute. The Public Works Department and the district Board always

address any grievances or proposals regarding the working of any department. Throughout India the head of the government has always been expected personally to make himself accessible to every subject. In theory the poorest could approach and lay any petition he wished at the feet of the Emperor in the days of Akbar. The same custom continues to-day. Every day, wherever the collector is, there is three times proclaimed the petition hour, the *Magna Carta* of India; and when the collector is on tour, the senior deputy collector acts for him at *sadr*. Every man, woman, and child throughout India knows that at that moment he can get the personal attention of the representative of the head of the government, and that every official who receives that petition forwarded through the collector's court will pay reasonably prompt and adequate attention to it; because behind the seal of the collector's court stands the collector's power of supervision and report over other departments. This is no eastern fairy story. Men, women, and children do come singly and in bodies, and their requests cover the most extraordinary variety of subjects.

§ 32. A word must also be added as to the collector's duties in times of famine. In India the people are normally supported on the produce of the locality in which they live. Under the peaceful conditions secured by British administration, the population is limited only by the normal capacity of the district for production. Whenever, therefore, the rains or crops fail, the people are threatened by famine. A state of famine is deemed to exist whenever relief works have to be started. The collector has to advise the government how far to insure against failure of rain, by storing water and irrigating areas sufficient to provide the district with food enough to carry the people through seasons of scarcity. How this is to be done is of course a question for the Public Works Department. He must also suggest what railways are needed for the importation of grain, and what roads for distributing it throughout the district. Nowadays famine does not imply lack of food, for owing to the vast production on huge irrigation schemes such as those of the Punjab and Ganges Valley, there is always enough for everybody somewhere. Thanks to railways it finds its way to the place where it is wanted, in the natural course of trade. 'Famine' now means merely 'lack of agricultural employment'; and the district officer's problem is to provide some other employment as a substitute. The Public Works Department and the district Board always

have works in their programmes waiting to be done, and they take advantage of a famine to get them done at once instead of later. Further every district has a list of works which would only be worth undertaking in order to provide employment in famine. The collector keeps it up to date and extends it as occasion requires.

§ 33. In respect of revenues other than those arising from land we may note that cases arising under laws relating to stamps, excise, salt, or government land, are dealt with by sub-divisional officers. The collector hears some of the appeals on cases arising from the laws governing the relations of landlord and tenant.

§ 34. We may now turn to his duties as residuary legatee. He is, in fact, the administrative maid-of-all-work. Whether there are funds to be raised for public charities, loans to be subscribed to, or troops to be recruited in time of war, the task falls on the collector and his assistants. It is mainly through him that Government keeps touch with the political state of India.

§ 35. In the United Provinces, the collector is invariably chosen by the district board to act as their chairman, even if government has not appointed him in the first instance. His duties in that capacity are so important that it will be well to glance at the powers and revenues of these bodies, and especially at their constitution. For these district boards elect a number of members to the legislative council of the province, who in turn elect members to the Legislative Council of India. They merit attention, therefore, as an important element in the basis of the whole electoral system.

§ 36. As the Indian district has a certain resemblance to the English county, so has the district board to the county council. Of the members of the district board, not more than one-fourth are appointed on the recommendation of the district officer. They are as a rule selected from the sub-divisional officers, the civil surgeon, the deputy inspector of schools, and other officials. The rest are elected, so many for each of the four or five tahsils in the district. The electors, not less than twenty-five or more than one hundred for each tahsil, are nominated by the collector on the recommendation of the tahsildar. The list includes the honorary magistrates (the equivalent of the English J.P.), landowners, money-lenders, and sometimes a few large tenants; but the landowners usually predominate. Those guilty of petty oppressions are struck off the list. In practice, the selection

[illegible]

Figure 1

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other factors constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other factors constant.

have works in their programmes waiting to be done, and they take advantage of a famine to get them done at once instead of later. Further every district has a list of works which would only be worth undertaking in order to provide employment in famine. The collector keeps it up to date and extends it as occasion requires.

§ 33. In respect of revenues other than those arising from land we may note that cases arising under laws relating to stamps, excise, salt, or government land, are dealt with by sub-divisional officers. The collector hears some of the appeals on cases arising from the laws governing the relations of landlord and tenant.

§ 34. We may now turn to his duties as residuary legatee. He is, in fact, the administrative maid-of-all-work. Whether there are funds to be raised for public charities, loans to be subscribed to, or troops to be recruited in time of war, the task falls on the collector and his assistants. It is mainly through him that Government keeps touch with the political state of India.

§ 35. In the United Provinces, the collector is invariably chosen by the district board to act as their chairman, even if government has not appointed him in the first instance. His duties in that capacity are so important that it will be well to glance at the powers and revenues of these bodies, and especially at their constitution. For these district boards elect a number of members to the legislative council of the province, who in turn elect members to the Legislative Council of India. They merit attention, therefore, as an important element in the basis of the whole electoral system.

§ 36. As the Indian district has a certain resemblance to the English county, so has the district board to the county council. Of the members of the district board, not more than one-fourth are appointed on the recommendation of the district officer. They are as a rule selected from the sub-divisional officers, the civil surgeon, the deputy inspector of schools, and other officials. The rest are elected, so many for each of the four or five tahsils in the district. The electors, not less than twenty-five or more than one hundred for each tahsil, are nominated by the collector on the recommendation of the tahsildar. The list includes the honorary magistrates (the equivalent of the English J.P.), landowners, money-lenders, and sometimes a few large tenants; but the landowners usually predominate. Those guilty of petty oppressions are struck off the list. In practice, the selection

is mainly settled by the tahsildars, but they are not often accused of abusing their power.¹

§ 37. As a rule three members are returned for each tahsil. The elections, more often than not, are uncontested. On the other hand, they are often contested with vigour. Charges of corrupt practice are examined and dealt with by the district magistrate. No statute law relating to corrupt practices has yet been formulated. The candidates are largely landholders and money-lenders, who alone can afford the time and expense involved in travelling long distances from inaccessible places to attend meetings. In districts with large cities lawyers and men of the commercial class seek election.

§ 38. The board administers :

Primary Schools (Vernacular).

Local Roads.

Ferries.

Tree Planting along the Roads.

Pounds.

Dispensaries (Medical and Veterinary).

Provision of bulls and stallions for breeding purposes.

Vaccination.

Fairs and Agricultural Shows.

Village Sanitation.

The revenues of the board are derived from :

School Fees.

Pound Fines.

Government Grants.

Miscellaneous Services such as arboriculture, fairs, markets, ferries, &c. ;

¹ On this passage the Indian critic quoted in the last note records the following observation :

'According to the rule contained in the District Board Manual, the list of voters should include the names of "persons *residing*, or owning landed property or business in the Tahsil, as the District Magistrate, having regard to their position and their interest or influence in the Tahsil, may consider fit persons to act as electors". So even persons merely residing in the Tahsil could be included. The real qualification is the choice of the District Magistrate, which in practice is the choice of the Tahsildar.

'The Tahsildars may not be abusing their power, but they do not use it properly either. As a rule the last year's list is copied for the current year and includes names of dead persons. Most of the educated and prominent men of the District who are capable of taking interest in and forming opinion on public affairs live in the Sadr Tahsil (the Tahsil which includes the head-quarters of the District) and yet partly through the negligence of the Tahsildar and partly on account of the limit to the number of the voters, their names are often conspicuous by their absence from the list.'

¹ On this passage the Indian critic quoted in the last note records the following observation :

'According to the rule contained in the District Board Manual, the list of voters should include the names of "persons *residing*, or owning landed property or business in the Tahsil, as the District Magistrate, having regard to their position and their interest or influence in the Tahsil, may consider fit persons to act as electors". So even persons merely residing in the Tahsil could be included. The real qualification is the choice of the District Magistrate, which in practice is the choice of the Tahsildar.

'The Tahsildars may not be abusing their power, but they do not use it properly either. As a rule the last year's list is copied for the current year and includes names of dead persons. Most of the educated and prominent men of the District who are capable of taking interest in and forming opinion on public affairs live in the Sadr Tahsil (the Tahsil which includes the head-quarters of the District) and yet partly through the negligence of the Tahsildar and partly on account of the limit to the number of the voters, their names are often conspicuous by their absence from the list.'

but chiefly from cesses on land, which are collected at the same time and by the same officers as the land revenue. Like the land revenue the cess is fixed for thirty years and cannot be raised or lowered. The maximum cess is fixed by statute at 5 per cent. on annual value or 10 per cent. on revenue. But within that maximum the provincial government can fix any rate, and in practice this would be done on the recommendation of the district board. The district board collects all its revenues through its own officers except the provincial rate, which is collected for it by the collector along with the land revenue and credited in the treasury to the board's account.

§ 39. In dealing with pounds the boards exercise a perfectly free hand. Otherwise the work is largely of a technical nature, connected with education, veterinary work, sanitation, and buildings, which require expert supervision. The boards cannot afford to pay real experts, and the result is that in most cases the expert supervision is supplied by a government department. The education department is constantly urging them to improve the schools; the public works department to spend more on roads; the medical department to develop the dispensaries; the sanitary department to improve village sanitation; the agricultural department to encourage fairs and shows, and the Civil Veterinary Department to increase the service of stallions and bulls. The collector acts as a link between the board and all those departments, and this is one of the reasons why he is chosen as chairman and executive officer of the board. In dealing with government departments the board thinks it an advantage to have an official chairman; and the collector, who goes everywhere and is supposed to know every one and everything, and who has a big local staff all over the district at his beck and call, seems the natural person to select.

The board has also a secretary who in large districts is paid to give his whole time to its work. His special job, besides running the work of the board at head-quarters, is inspection. He (or any member of the board) is entitled to suggest that a school wants more equipment, or anything else; but the 'member in charge'—the technical adviser to the board—always has a say on such suggestions, and it is he whom the board will follow.

The deputy inspector, who is an official of the Education Department, reports on the teaching, and is thus the servant of two masters. Most of the schools are public institutions,

Abstract

100

100

1. *Journal of the American Medical Association*, 2000; 283: 2689-2693.

but chiefly from cesses on land, which are collected at the same time and by the same officers as the land revenue. Like the land revenue the cess is fixed for thirty years and cannot be raised or lowered. The maximum cess is fixed by statute at 5 per cent. on annual value or 10 per cent. on revenue. But within that maximum the provincial government can fix any rate, and in practice this would be done on the recommendation of the district board. The district board collects all its revenues through its own officers except the provincial rate, which is collected for it by the collector along with the land revenue and credited in the treasury to the board's account.

§ 39. In dealing with pounds the boards exercise a perfectly free hand. Otherwise the work is largely of a technical nature, connected with education, veterinary work, sanitation, and buildings, which require expert supervision. The boards cannot afford to pay real experts, and the result is that in most cases the expert supervision is supplied by a government department. The education department is constantly urging them to improve the schools; the public works department to spend more on roads; the medical department to develop the dispensaries; the sanitary department to improve village sanitation; the agricultural department to encourage fairs and shows, and the Civil Veterinary Department to increase the service of stallions and bulls. The collector acts as a link between the board and all those departments, and this is one of the reasons why he is chosen as chairman and executive officer of the board. In dealing with government departments the board thinks it an advantage to have an official chairman; and the collector, who goes everywhere and is supposed to know every one and everything, and who has a big local staff all over the district at his beck and call, seems the natural person to select.

The board has also a secretary who in large districts is paid to give his whole time to its work. His special job, besides running the work of the board at head-quarters, is inspection. He (or any member of the board) is entitled to suggest that a school wants more equipment, or anything else; but the 'member in charge'—the technical adviser to the board—always has a say on such suggestions, and it is he whom the board will follow.

The deputy inspector, who is an official of the Education Department, reports on the teaching, and is thus the servant of two masters. Most of the schools are public institutions,

to some extent supervised by village committees. Private schools are also subsidized by the boards. Some schools, in which English is taught, are started by teachers as a private enterprise, but they seldom flourish. Besides these there are religious schools, the Maktah or religious Moham-medan school, and the Patsala, the Sanscrit school of the Hindu.

The members of the board are assembled at the administrative centre of the district once a month. They are in some districts divided into four committees: one dealing with finance, a second with public works, a third with education, and a fourth with public health. More often they are divided into tahsil committees. They meet first and deal with matters remitted to them by the board.

§ 40. I will now reprint the next five paragraphs relating to district boards as they were originally issued for criticism in India, omitting only certain misstatements on minor points. The next paragraph in particular was compiled from accounts given by senior officers who had not been in touch with district boards for some years. I shall then give the burden of the criticism made on these statements by officers with more recent experience of the boards.

Afterwards the full board meets under the presidency of the collector. The agenda paper prepared in the vernacular by the secretary is handed round. The collector opens the meeting by asking the board to confirm the minutes. He next asks them to pass the expenditure and accounts, and looks carefully to see how the revenue is coming in. The part played by the members is for the most part confined to making representations in favour of their several localities. They ask for bulls and stallions to be sent to their respective constituencies, for some money to be spent upon road construction, or schools in their neighbourhood, &c. The collector listens to all the opinions which are offered, hears them discussed by the members at large, and then proposes the course to be taken, and his proposal is usually endorsed by the board. On questions affecting the district as a whole the board is useful as an advisory body. By questions the collector elicits information from members with regard to the local conditions in each tahsil.¹ But the motions upon which action is taken originate from the collector himself, and if pressed are always adopted by the board. The minutes record no divisions. The members in fact adopt the role of a Greek chorus: commenting, applauding, advising,

¹ A member of the I.C.S. remarks on this passage:

'Collectors know the vernacular too little and less than they used to.'

to some extent supervised by village committees. Private schools are also subsidized by the boards. The fourteenth is the fact that the disease is now being reported from the cities of the North and West. This is a change from the former times when the disease was more prevalent in the South and East.

but originating nothing except suggestions which the collector then formulates into motions.¹

The collector will use these meetings for transacting a variety of business. In consultations with the board he will take steps for disseminating war news, encouraging subscriptions to the war loan, and so forth. A full meeting usually takes from one to one and a half hours. With the time previously spent on committees, a whole morning will be given to the work.

It is said that the reason why boards in the United Provinces invariably ask for the appointment of the collector as chairman, is because members believe that Government would decline to sanction the appointment of an ordinary member to the office.² The Decentralization Commission considered that Government ought to insist upon the collector filling this post, on the ground that he alone was in touch with unofficial opinion in the various parts of his district. By others it is held that only by touring throughout the district can collectors keep in touch with public opinion. The appointment of ordinary members as chairmen has long been the practice in the Central Provinces, and, so it would seem, with satisfactory results.

In the Legislative Council, the Financial Secretary of the United Provinces referred to the practice whereby the selection of voters is left to the collector and tahsildar as one 'in need of amendment' which 'should be superseded by some system of definite qualifications for voters'. He predicted, moreover, that boards would have to be given some real powers of local taxation.

Such changes, if effected, will inaugurate a real experiment in local self-government. In the absence of these changes the collector has retained a final control over all the functions of government in his district. But if and when these changes are made, a certain number of those functions will be detached and the boards will not merely be suffered, but even obliged to control them. They will have not only to decide between contending claims, but also to originate decisions where progress which involves further expenditure is demanded. They will either have to refuse the demand or face the odium of imposing further taxation.³ And in all this they will find themselves responsible

¹ The officer from the Central Provinces above quoted remarks, 'Such a description is far from true of the Central Provinces'.

² Speech by the Hon. Raja Kushalpal Singh in the Legislative Council of the United Provinces, January 29, 1917. An officer in the United Provinces remarks that the better and real reason is that given above in the first paragraph of § 39.

³ An officer from the United Provinces writes: 'They will (1) ask for aid from government on the ground that they are a poor district; (2) failing this, try to go bankrupt (i. e. budget for expenditure beyond

The first step in the process is to identify the problem. This involves gathering information about the situation and the people involved. Once the problem is identified, the next step is to analyze it. This involves breaking the problem down into its components and understanding how they are related. The third step is to develop a plan. This involves deciding on the best way to solve the problem and the steps that need to be taken. The fourth step is to implement the plan. This involves putting the plan into action and making sure that it is followed. The fifth step is to evaluate the results. This involves checking to see if the problem has been solved and if the plan was effective.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.012
Gender of the head of household (Male = 1, Female = 0)	-0.15	0.08	-1.88	0.061
Constant	1.20	0.10	12.00	< 0.001

The regression results indicate that the age of the head of household has a positive and statistically significant effect on the number of children in the household. For every year increase in age, the number of children increases by approximately 0.05. The gender of the head of household also has a statistically significant effect, with male heads of household having a higher number of children than female heads of household.

to an electorate formed on the basis of a definite qualification and not selected by government officials. It must then be seen how far electorates and their representatives can rise to the situation by placing the public interests of the district as a whole above those of localities or individuals. For it is upon the development of this capacity to subordinate personal and sectional interests to those of the community that the future of self-government rests. The experiment will also prove whether it is really possible for two authorities to subsist side by side, one in charge of certain functions and revenues, for which it is responsible to an electorate below, and the rest in charge of an official responsible to a government above. A genuine experiment will in fact have been made in applying the principle of dyarchy to a district.

With reference to the foregoing paragraphs, a number of officers with recent experience of district boards tell me that the above account might be true of them in 1900, but certainly would not apply to many of them now. The extent to which boards in the course of this century have developed a will and mind of their own is, they assure me, unmistakable. If few cases are on record in which boards have negatived proposals of the chairman, that is largely because district officers are careful to ascertain what proposals the boards will or will not accept before they are actually framed and formally submitted to the board. Of the several criticisms before me I select the following with which the others agree: 'This account of a meeting is out of date. It was so ten years ago but not now. Members have something, often a great deal to say, and they say it. They make their own suggestions freely. At present the difficulty in my experience is not to get them to make the suggestions, but to get them to take the further step of formulating schemes to carry out their own suggestions. But that will come. I am convinced', this officer adds, 'that it would be a most excellent thing to do away with the official chairman, wherever it is possible, i.e. wherever a non-official able and willing to do the work exists. And I believe that there are very few districts indeed where such a man does not exist.' My account, though based on obsolete data, thus served to elicit evidence of a marked development on the part of these bodies in the last decade of initiative, independence, and faculty of self-government. Such progress is full of promise.

their means); (3) when pulled up, propose to tax voiceless minorities, e.g. tenants, shopkeepers, &c.'

their means); (3) when pulled up, propose to tax voiceless minorities, e. g. tenants, shopkeepers, &c.'

The first of these is the fact that the American Medical Association is not a body of men, but a body of ideas. It is a body of ideas which has been built up over a long period of time, and which is now being built up again. It is a body of ideas which is based on the principle of the separation of the medical profession from the state, and which is based on the principle of the freedom of the medical profession to practice its art as it sees fit. It is a body of ideas which is based on the principle of the freedom of the medical profession to practice its art as it sees fit. It is a body of ideas which is based on the principle of the freedom of the medical profession to practice its art as it sees fit.

The second of these is the fact that the American Medical Association is not a body of men, but a body of ideas. It is a body of ideas which has been built up over a long period of time, and which is now being built up again. It is a body of ideas which is based on the principle of the separation of the medical profession from the state, and which is based on the principle of the freedom of the medical profession to practice its art as it sees fit. It is a body of ideas which is based on the principle of the freedom of the medical profession to practice its art as it sees fit. It is a body of ideas which is based on the principle of the freedom of the medical profession to practice its art as it sees fit.

The third of these is the fact that the American Medical Association is not a body of men, but a body of ideas. It is a body of ideas which has been built up over a long period of time, and which is now being built up again. It is a body of ideas which is based on the principle of the separation of the medical profession from the state, and which is based on the principle of the freedom of the medical profession to practice its art as it sees fit. It is a body of ideas which is based on the principle of the freedom of the medical profession to practice its art as it sees fit. It is a body of ideas which is based on the principle of the freedom of the medical profession to practice its art as it sees fit.

The fourth of these is the fact that the American Medical Association is not a body of men, but a body of ideas. It is a body of ideas which has been built up over a long period of time, and which is now being built up again. It is a body of ideas which is based on the principle of the separation of the medical profession from the state, and which is based on the principle of the freedom of the medical profession to practice its art as it sees fit. It is a body of ideas which is based on the principle of the freedom of the medical profession to practice its art as it sees fit.

§ 41. Towns are outside the jurisdiction of the district boards. The board is in fact confined to rural affairs; those of the urban areas are entrusted to municipal boards of two grades, the powers of which in the United Provinces have been largely extended by recent legislation. For this purpose it will be useful to give a sketch of one of these bodies as it exists in Lucknow, a town which is the centre of a division as well as of a district.

The board in question is composed as follows :

13 members elected by Hindus.

9 " " Moslems.

2 " " Europeans.

2 " nominated by Government.

2 " " Association of Zamindars.

1 " " Local Railway Officials.

1 " " Medical College.

30

At the moment of writing the Hindus have refused to elect the members assigned to that religion.

The right to vote is accorded to residents in the municipal area who pay a certain amount of income tax, land revenue, municipal taxes (water-rate, wheel tax, &c.), or house rent, to occupiers of land of a specified value, to persons earning an income of Rs. 300 a year and upwards and to Bachelors of Arts of five years' standing.

The qualifications for membership on the board are similar, but slightly higher.

The board must elect a non-official chairman, or else refuse to elect at all. Executive officers to whom certain powers are delegated, including the control of minor appointments, are appointed by the board in a few large cities. The boards have complete control of their own income and expenditure. There is thus a definite division of powers between the functions and revenues assigned to elective boards, and those reserved to the collector. It is still too early to predict the results of the experiment, which are therefore to be watched with the greatest interest.

The duty of compiling a provisional list of voters is left to the board, and is entrusted by them to one of their officials, usually the secretary or the superintendent of collections (of revenue). The list when made is revised by a committee consisting of two members of the board and a government official. Within fifteen days thereafter the

The first of these is the fact that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is the basis of the second point, which is that the human body is not a static entity, but a dynamic one, constantly changing and evolving. This is the basis of the third point, which is that the human body is not a passive recipient of its environment, but an active participant in it.

The fourth point is that the human body is not a single entity, but a collection of many different parts, each of which has its own function and purpose.

The fifth point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is the basis of the second point, which is that the human body is not a static entity, but a dynamic one, constantly changing and evolving. This is the basis of the third point, which is that the human body is not a passive recipient of its environment, but an active participant in it.

The sixth point is that the human body is not a single entity, but a collection of many different parts, each of which has its own function and purpose.

The seventh point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is the basis of the second point, which is that the human body is not a static entity, but a dynamic one, constantly changing and evolving. This is the basis of the third point, which is that the human body is not a passive recipient of its environment, but an active participant in it.

The eighth point is that the human body is not a single entity, but a collection of many different parts, each of which has its own function and purpose.

The ninth point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is the basis of the second point, which is that the human body is not a static entity, but a dynamic one, constantly changing and evolving. This is the basis of the third point, which is that the human body is not a passive recipient of its environment, but an active participant in it.

The tenth point is that the human body is not a single entity, but a collection of many different parts, each of which has its own function and purpose.

The eleventh point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is the basis of the second point, which is that the human body is not a static entity, but a dynamic one, constantly changing and evolving. This is the basis of the third point, which is that the human body is not a passive recipient of its environment, but an active participant in it.

district magistrate may add names, an arrangement made simply for the purpose of rectifying mistakes.

The town is divided into eight wards, which are regrouped for the purpose of the three different electorates. For these wards a general electorate, mainly Hindu, elects thirteen members, the Moslems nine, and the Europeans two.¹ The Moslems have secured representation far in excess of their relative numbers. They fear lest the Hindu majority should impose the Hindi language on vernacular schools to the exclusion of Urdu. As in Ireland patronage is also one of the issues; certain trades and localities are almost entirely Moslem, and fear the neglect of a Hindu majority. Then there are questions as to the building or demolition of temples, graveyards, or mosques, and as to obstruction of religious processions. At the background of everything is the feeling that if the Musulmans do not obtain recognition of their position on local bodies, neither will they on the legislative councils or the executive councils, or when the day dawns, on the cabinets of self-governing provinces. At the back of people's minds is the still unformulated question whether self-governing India will be Hindu or undenominational.

We may now turn to examine the sources from which the board derives its revenues. Of these the most important is the octroi or municipal tariff levied on certain classes of imports at the railway stations and at points where the roads enter the municipal area. The board have full liberty in framing this tariff subject to the right which government reserves to disallow any particular item.

In addition to the octroi are taxes on wheels and horses, and various licences. There are charges for water and for other services rendered, and a government subsidy in aid

¹ On this passage and on one now eliminated, in which I suggested proportional representation as a better way out of the difficulty an officer of the U.P. remarks: 'It is hardly right to omit the fact that the whole of this is due to Lord Morley who both established the Councils on these lines and gave Mohammedans greater representation than their numbers justified. Proportional representation won't work for people who don't want proportions but a good deal more.'

'As a matter of fact the simplest system of proportional representation—the single non-transferable vote—has been introduced for the smaller towns under the Town Areas Act. This was possible because politics didn't come in and no one cared. I discussed a proportional system with a few leading Hindus and Mohammedans. Neither side would look at it, though for different reasons.'

'As applied to Europeans it would also be difficult: for example, would it be fair that Europeans in Cawnpore, whose industries almost are Cawnpore, should have no representation except in proportion to their numbers?'

district magistrate may add names, an arrangement made simply for the purpose of rectifying mistakes.

The town is divided into eight wards, which are regrouped for the purpose of the three different electorates. For these wards a general electorate, mainly Hindu, elects thirteen members, the Moslems nine, and the Europeans two.¹ The Moslems have secured representation far in excess of their relative numbers. They fear lest the Hindu majority should impose the Hindi language on vernacular schools to the exclusion of Urdu. As in Ireland patronage is also one of the issues; certain trades and localities are almost entirely Moslem, and fear the neglect of a Hindu majority. Then there are questions as to the building or demolition of temples, graveyards, or mosques, and as to obstruction of religious processions. At the background of everything is the feeling that if the Musulmans do not obtain recognition of their position on local bodies, neither will they on the legislative councils or the executive councils, or when the day dawns, on the cabinets of self-governing provinces. At the back of people's minds is the still unformulated question whether self-governing India will be Hindu or undenominational.

We may now turn to examine the sources from which the board derives its revenues. Of these the most important is the octroi or municipal tariff levied on certain classes of imports at the railway stations and at points where the roads enter the municipal area. The board have full liberty in framing this tariff subject to the right which government reserves to disallow any particular item.

In addition to the octroi are taxes on wheels and horses, and various licences. There are charges for water and for other services rendered, and a government subsidy in aid

of education. The octroi system is curiously popular. The tax-gatherer is nowhere a welcome visitor. The poor have not imagination enough to see that under the octroi system they pay as much as or more than under a system of direct taxation. In any case they prefer to pay by increased price of their necessities one pie daily per quarter than 48 pies at the end of that time. The same applies to the rich with this addition, that whereas a rich family may pay twenty-five times as much as a poor one in octroi, its income is perhaps a hundred times as much. Steps, however, are being taken in the larger towns to confine it to a terminal charge on imports and exports.¹ Another plan is to substitute a tax on 'circumstances and property'. If a man has property in the municipal area, he is rated thereon. If he has no fixed property, he is rated on his business profits or professional earnings. It is important to note that, subject to government approval, the board has much wider powers of originating schemes of taxation than an English town council.

The municipal board collects all its revenue for itself through its own officers. By some authorities there is said to be little corruption. Most of the revenue reaches the municipal coffers, for corruption more often takes the form of levying exactions in excess of dues than in misappropriation of the board's money.

The functions of boards are as follows :

They are supposed to provide for the lighting, shading, watering, and cleansing of streets and public places, regulation of offensive and dangerous trades, public protection against dangerous structures, provision and control of cemeteries, &c., construction and maintenance of streets, markets, slaughter-houses, latrines, drains, and water supplies ; registration of births and deaths, vaccination, medical relief, hospitals, and dispensaries ; primary education, and protection against fire.

They have also power to provide for street improvements, parks, gardens, libraries, museums, lunatic asylums, public halls, rest houses, camping grounds, poor houses, dairies, bathing and washing places, drinking places, dams, and other works of public utility ; for reclaiming unhealthy

¹ An officer from the United Provinces adds : ' Under pressure from Government and almost everywhere against the will of the boards who, with their constituents, dislike the alternative, which is usually direct taxation, terminal taxes are being adopted in a very few large centres of trade.'

The first of these is the fact that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment. The second point is that the human body is not a static entity, but a dynamic one, capable of growth and development. This is evident from the fact that the body changes from childhood to adulthood, and from adulthood to old age. The third point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment.

The fourth point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment. The fifth point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment.

The sixth point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment. The seventh point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment. The eighth point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment.

The ninth point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment. The tenth point is that the human body is not a simple machine, but a complex organism, capable of adapting itself to its environment. This is evident from the fact that the same individual may exhibit different characteristics at different times, or in different environments. For example, a person who is healthy and active in one environment may become ill and inactive in another. This is due to the fact that the body is constantly changing, and is influenced by a variety of factors, including diet, exercise, and environment.

areas, taking a census, making surveys, relieving local calamities, removing stray dogs, sewage disposal, tram services, fairs and exhibitions, or any other matter which the government may delegate to them.

These functions are distributed amongst various committees, which deal respectively with education, water supply, public health, town improvement, building, public works, and finance. The building committee meets twice a month to pass plans ; the others each meet once a month, the board assembling once a fortnight to deal with their reports.

§ 42. I will here supplement this sketch of municipal government by inserting an able and authoritative note on the subject prepared by an officer of the United Provinces.

There are in the United Provinces 83 municipalities ; 45 of those had up to last year official chairmen either elected by the boards or nominated by the Government ; while 21 had elected non-official chairmen and 18 non-official chairmen nominated by the Government. The control exercised by the presence of an official chairman at the meeting of a board was very great ; but the United Provinces Government in introducing what is now the Municipalities Act of 1916 decided to take a bold step in freeing municipalities from official control and in leaving them with all the responsibilities of Local Self-Government within their municipal areas.

Most of the boards have under the provisions of the present Act been constituted on a popular basis with the exception of very few municipalities which are peculiarly situated but the circumstances of which need not be discussed here. Four-fifths at least of the members of the boards are elected by an electorate, while not more than one-fifth may be nominated and out of this one-fifth not more than two may be nominated directly by the Government, the remainder being nominated by nominating bodies who are considered to be of sufficient importance to justify representation on the municipal board although arrangements could not be made for their representation through the electorate. The most usual and general qualification for an elector in a municipality is, as in England, the ownership or occupation of a house of a minimum annual value or the payment of a minimum amount of municipal taxes. There are other qualifications such as, e.g. being a graduate of a University, but few persons who possess these separate qualifications do not possess the general qualification of occupying or owning a house of the minimum annual value.

Of the 83 municipalities of the province 10 are classed as cities and the remainder as non-city municipalities. The 10 cities include all municipalities with a population of 100,000 or over and one or two of the more important towns with a smaller population. It is

There are in the United Provinces 83 municipalities; 45 of those had up to last year official chairmen either elected by the boards or nominated by the Government; while 21 had elected non-official chairmen and 18 non-official chairmen nominated by the Government. The control exercised by the presence of an official chairman at the meeting of a board was very great; but the United Provinces Government in introducing what is now the Municipalities Act of 1916 decided to take a bold step in freeing municipalities from official control and in leaving them with all the responsibilities of Local Self-Government within their municipal areas.

Most of the boards have under the provisions of the present Act been constituted on a popular basis with the exception of very few municipalities which are peculiarly situated but the circumstances of which need not be discussed here. Four-fifths at least of the members of the boards are elected by an electorate, while not more than one-fifth may be nominated and out of this one-fifth not more than two may be nominated directly by the Government, the remainder being nominated by nominating bodies who are considered to be of sufficient importance to justify representation on the municipal board although arrangements could not be made for their representation through the electorate. The most usual and general qualification for an elector in a municipality is, as in England, the ownership or occupation of a house of a minimum annual value or the payment of a minimum amount of municipal taxes. There are other qualifications such as, e.g. being a graduate of a University, but few persons who possess these separate qualifications do not possess the general qualification of occupying or owning a house of the minimum annual value.

Of the 83 municipalities of the province 10 are classed as cities and the remainder as non-city municipalities. The 10 cities include all municipalities with a population of 100,000 or over and one or two of the more important towns with a smaller population. It is

only in the case of these city municipalities that the Local Government may require the board to appoint an executive officer. The Local Government has no power to make any such order in the case of the remaining 73 municipalities. As a matter of fact the Local Government has not had to issue any such orders in the case of the 10 municipalities referred to as all the municipalities in which there are at present executive officers appointed these officers of their own accord. The reason for the provision regarding the executive officer is as follows : It is an unfortunate fact that the early municipal Acts of these and other provinces laid upon the collective board the duty of carrying out a great deal of executive work and did not restrict the operations of the board to its natural functions, viz. those of legislation and control by means of by-laws and of dealing with finance. The result was that a great deal of the executive work which is carried out in municipalities in the west by the executive staff came to be dealt with, in many cases illegally, by individual members of the board, while these cases came up in large numbers before the board or committees of the board. For example, a board makes by-laws regulating the erection and re-erection of buildings and regulating sanitation. The enforcement of these by-laws in individual cases ought obviously to be dealt with by the staff of the board and the courts, but as a matter of fact they have been dealt with by the board and committees of the board—a most unsuitable agency for any such work. The result has been that the by-laws of the board have not been enforced because members are liable to pressure from their friends, acquaintances, or electors who may be required to make structural alterations in buildings, to erect privies, to remove nuisances ; while if the work had been left to the executive staff (who would of course have been bound by the board's by-laws) the work would have been much more satisfactorily carried out as the duty of the sanitary inspectors, medical officers of health, and engineers of the board would merely have been to see that the board's by-laws were enforced. Another result was that in the larger towns it was impossible to comply with the strict letter of the law without very great delay and congestion of municipal business and the Collector-chairman had in many cases to take upon himself the responsibility of issuing orders in the name of the board which he trusted the board to confirm at the next meeting. If the boards had been set free from official control with this state of affairs still existing it would have been impossible for the average non-official chairman to devote the time required to pass orders in every individual case, and the result would have been either the boards would at once have come to grief or that the selection of a chairman would have been confined to the comparatively narrow field of the persons with sufficient leisure to devote their whole time to municipal work. It was, therefore, decided that it was absolutely necessary in the case of the larger towns to provide for the efficient and business-like carrying out of the board's orders and by-laws by

It was, therefore, decided that it was absolutely necessary in the case of the larger towns to provide for the efficient and business-like carrying out of the board's orders and by-laws by

entrusting the enforcement of these by-laws and orders to the **st** under the control of an officer who is called an executive officer and who it was originally intended should hold a position somewhat similar to that of a town clerk in an English Corporation. The powers of the executive officer have, however, been considerably whittled down, but there was practically no opposition whatsoever by non-official members to the proposal that arrangements should be made in this manner for the expeditious carrying out of the board's orders and by-laws. The somewhat slender powers of the Local Government under the previous Acts to interfere with a board's resolutions have been very considerably diminished under the present Act. The power, for example, to veto a resolution on the ground that it is illegal and beyond the powers of the board was deliberately removed from the new Act as it was considered the boards should now be left to themselves to suffer the consequence of their ignorance of the provisions of the law. The only power to veto a resolution or order of a board is that conferred by section 34 of the Act upon the Commissioner and the District Magistrate to veto an order or resolution 'if in his opinion such resolution or order is of a nature to cause or tend to cause obstruction, annoyance, or injury to the public or to any class or body of persons lawfully employed ; danger to human life, health, or safety, or a riot or affray'. This power is very strictly limited and is practically confined to the powers of a District Magistrate to prevent danger to human life or a riot or affray. The other class of cases, viz. cases of obstruction, annoyance, or injury to the public or any class or body of persons lawfully employed, could only be used in cases where a resolution or order of a board was likely to cause a public nuisance or was passed for the purpose of annoying a minority of the population. It is as a matter of fact most unlikely that such powers will ever be used, and I am not aware of any case in which they have ever been used.

The only other power in the hands of the Local Government is the power conferred by section 35 of the Act to call upon a board that has made default in performing a duty to perform that duty, and if the duty is not performed within the period specified in the order, to order the District Magistrate to perform the duty and recover the expenses from the municipal fund. This is an extraordinary provision which has never actually been used and which is not likely to be used. The only real power which the Local Government has retained is a power that it obviously must retain, viz. that of superseding a board that has grossly neglected its duty, but this again is a power that obviously can only be used in very extreme cases and is never likely to be used at all.

The result is, then, that the Local Government has retained practically no control over the actions of boards and that boards have not been set free from official control with full powers and heavy responsibilities. They have very great powers as regards taxation

entrusting the enforcement of these by-laws and orders to the **st** under the control of an officer who is called an executive officer and who it was originally intended should hold a position somewhat similar to that of a town clerk in an English Corporation. The powers of the executive officer have, however, been considerably whittled down, but there was practically no opposition whatsoever by non-official members to the proposal that arrangements should be made in this manner for the expeditious carrying out of the board's orders and by-laws. The somewhat slender powers of the Local Government under the previous Acts to interfere with a board's resolutions have been very considerably diminished under the present Act. The power, for example, to veto a resolution on the ground that it is illegal and beyond the powers of the board was deliberately removed from the new Act as it was considered the boards should now be left to themselves to suffer the consequence of their ignorance of the provisions of the law. The only power to veto a resolution or order of a board is that conferred by section 34 of the Act upon the Commissioner and the District Magistrate to veto an order or resolution 'if in his opinion such resolution or order is of a nature to cause or tend to cause obstruction, annoyance, or injury to the public or to any class or body of persons lawfully employed; or danger to human life, health, or safety, or a riot or affray'. This power is very strictly limited and is practically confined to the powers of a District Magistrate to prevent danger to human life or a riot or affray. The other class of cases, viz. cases of obstruction, annoyance, or injury to the public or any class or body of persons lawfully employed, could only be used in cases where a resolution or order of a board was likely to cause a public nuisance or was passed for the purpose of annoying a minority of the population. It is as a matter of fact most unlikely that such powers will ever be used, and I am not aware of any case in which they have been used.

The only other power in the hands of the Local Government is the power conferred by section 35 of the Act to call upon a board that has made default in performing a duty to perform that duty, and if the duty is not performed within the period specified in the order, to order the District Magistrate to perform the duty and to recover the expenses from the municipal fund. This is an extraordinary provision which has never actually been used and which is never likely to be used. The only real power which the Local Government has retained is a power that it obviously must retain, viz. that of superseding a board that has grossly neglected its duty, but this again is a power that obviously can only be used in very extreme cases and is never likely to be used at all.

The result is, then, that the Local Government has retained practically no control over the actions of boards and that boards have now been set free from official control with full powers and heavy responsibilities. They have very great powers as regards taxation

all proposals for the imposition of a municipal tax must originate with them; and the Local Government, although it has the power to refuse sanction to proposals for taxation, has no power to impose a tax itself, and has no power, if it seeks to modify the proposals of the board, to make any modification which may increase the amount of the tax to be imposed. Again in legislative matters the board has enormous powers, powers to legislate and make by-laws on almost every conceivable subject (section 298 of the Act).

The experiment now made in the United Provinces is far in advance of anything attempted in any other province, and is a very real experiment in Local Self-Government. The results of the experiment will be very interesting to watch; for if municipal members are unable to run the affairs of their own town it is difficult to see how they can be deemed able to run the affairs of a larger area, while if the experiment is a success it will afford grounds for experiment on a wider field.

As to communal representation it is only fair to state the actual history of the case, which is, that, when Lord Morley started his Councils scheme on somewhat hasty lines, in response to protests from the Mohammedan community in London, he made a promise that both in the Council elections and in the elections to all representative bodies, such as municipal and district boards, the Mohammedans would be guaranteed a separate electorate. This promise was repeated by Lord Minto, and has been definitely embodied in the rules for separate representation for the legislative councils both provincial and imperial. When the proposal to amend the United Provinces Municipalities Act, with a view to making it possible to release the municipal boards entirely from official control, was brought up the Mohammedans at once objected and claimed the redemption of the promise made by the Secretary of State and the Viceroy before they would agree to the boards being released from official control, and the definite provisions now made in the United Provinces Municipalities Act were the results of a compromise between the Hindu and Mohammedan non-official members of the Council. The Bill in fact would never have been passed if this provision had not been inserted. The other possible remedies had of course been considered; but it was of no use raising them as neither party would look at them. It is of little use suggesting proportional representation in this country when the House of Commons has itself refused to recognize the principle. The method of voting under that system is no doubt simple, but the method of counting is, as you admit, complex, and must be done by experts and the difficulty of suggesting any such system in this country is that the system of counting is unduly complex and is very difficult to explain to the voters.

As regards the methods of taxation in municipalities out of a total income (I quote the figures in thousands of rupees) of 94.42 in the year 1915-16, 29.44 was derived from octroi, 4.28 from house-tax,

all proposals for the imposition of a municipal tax must originate with them; and the Local Government, although it has the power to refuse sanction to proposals for taxation, has no power to impose a tax itself, and has no power, if it seeks to modify the proposals of the board, to make any modification which may increase the amount of the tax to be imposed. Again in legislative matters the board has enormous powers, powers to legislate and make by-laws on almost every conceivable subject (section 298 of the Act).

The experiment now made in the United Provinces is far in advance of anything attempted in any other province, and is a very real experiment in Local Self-Government. The results of the experiment will be very interesting to watch; for if municipal members are unable to run the affairs of their own town it is difficult to see how they can be deemed able to run the affairs of a larger area, while if the experiment is a success it will afford grounds for experiment on a wider field.

It is of little use suggesting proportional representation in this country when the House of Commons has itself refused to recognize the principle. The method of voting under that system is no doubt simple, but the method of counting is, as you admit, complex, and must be done by experts and the difficulty of suggesting any such system in this country is that the system of counting is unduly complex and is very difficult to explain to the voters.

As regards the methods of taxation in municipalities out of a total income (I quote the figures in thousands of rupees) of 94.42 in the year 1915-16, 29.44 was derived from octroi, 4.28 from house-tax,

98 from a tax on vehicles and animals, 1,83 from a tax on professions and trades, 1,63 from tolls, 5,57 from water-rate, 68 from conservancy, 3,45 from a tax on circumstances and property, 3,46 from terminal tax, 55 from terminal toll, and 93 from a pilgrim tax. There are at present only 33 municipalities in which octroi is in force, and the reason why this tax, which is such an obstacle to trade, has not been abolished in those 33 municipalities is that it has not hitherto been found possible to immediately replace it by direct taxation. Wherever it was possible to abolish the octroi tax and replace by direct taxation it has been abolished within the last eight years. Proposals are now being considered, however, for the abolition of octroi in all the other towns where it will probably be replaced by a light terminal tax collected mainly by the railways. But you will see from the above figures that there is already a fair amount of direct taxation. Direct taxation, however, is still extremely unpopular, and in spite of its obvious beneficial educative effect in compelling the ratepayers to take an interest in municipal matters still finds little favour with the politicians.

§ 43. The forty-eight districts of the United Provinces are, as we noticed above, grouped into ten divisions each in charge of a commissioner. The function of these superior officers is generally to reduce the volume of work which would otherwise go from the district officers to the Board of Revenue and government secretaries. The Board is the final court of appeal in revenue cases, but commissioners dispose of a large number of appeals from district courts before they get to the Board. In agrarian matters generally they 'devil' for the Board or government by giving advice or encouragement, settling whatever can be settled, pouring oil on troubled waters, applying the whip and spur if necessary, and keeping the higher authorities in touch with the people. District officers sometimes whisper that commissioners are the fifth wheel in the administrative coach. When they come to discharge the functions of commissioner later in life they are apt to revise that opinion, and compare him to oil in a motor car, theoretically unnecessary, but practically most useful. It is difficult to see how the members of the Board or the Central Government could get through their work without them, unless the personnel of the Board and government secretaries were greatly increased. There would probably be little or no saving in the actual number of officers. The change in fact might mean simply a transfer of senior officers from the mufassil to the capital of the province, which could scarcely be reckoned a change for the better.

98 from a tax on vehicles and animals, 1,83 from a tax on professions and trades, 1,63 from tolls, 5,57 from water-rate, 68 from conservancy, 3,45 from a tax on circumstances and property, 3,46 from terminal tax, 55 from terminal toll, and 93 from a pilgrim tax. There are at present only 33 municipalities in which octroi is in force, and the reason why this tax, which is such an obstacle to trade, has not been abolished in those 33 municipalities is that it has not hitherto been found possible to immediately replace it by direct taxation. Wherever it was possible to abolish the octroi tax and replace by direct taxation it has been abolished within the last eight years. Proposals are now being considered, however, for the abolition of octroi in all the other towns where it will probably be replaced by a light terminal tax collected mainly by the railways. But you will see from the above figures that there is already a fair amount of direct taxation. Direct taxation, however, is still extremely unpopular, and in spite of its obvious beneficial educative effect in compelling the ratepayers to take an interest in municipal matters still finds little favour with the politicians.

LAND REVENUE

(July 1917)

§ 1. IN the first of these studies, the chain of authority was traced from the Imperial Cabinet in London to Delhi and Simla, thence to the capital of the province, to the city which forms the centre of the division, to the country town which forms the centre of the district, and finally, to the village which constitutes the typical unit of Indian society. But let it be realized that in all these cities and towns there dwells but one-tenth of the total population of India. The remaining nine-tenths live in purely rural surroundings, and draw their subsistence directly or indirectly from tillage of the soil.

In England the rural population is partly gathered in villages, but the landscape is dotted with country houses, farms, and cottages, whose isolation bears witness to a condition of peace and security established centuries ago. In the greater part of India it is otherwise. Except in Assam, Eastern Bengal, and the west coast of Madras, most of the rural population of India is congregated in closely congested hamlets rising like mounds from the centre of the cultivated fields. Long ages of recurring disorder and rapine have imposed on the mass of the Indian people the gregarious habits of the ant. The mass of thickly crowded dwellings, moulded from the earth of the plain in which they stand, and threaded by narrow and tortuous lanes, is, indeed, strangely suggestive of an ant-heap. The suggestion is enhanced by the fact that the village is usually super-imposed on a mound, which the casual traveller is apt to suppose to be some natural hillock, chosen by the villagers for the purpose of better drainage or defence. In this, however, he is usually mistaken; for the mound is commonly composed of the debris of dwellings, many of which had crumbled to dust before the art of writing was known or history had dawned. When wolves still howled where Notre Dame and St. Paul's now stand, and the very names of Athens or Rome were unheard of, there lived and toiled on these sites the predecessors of the villagers who tenant them to-day. It is with some feeling of reverence

LAND REVENUE

(July 1917)

§ 1. IN the first of these studies, the chain of authority was traced from the Imperial Cabinet in London to Delhi and Simla, thence to the capital of the province, to the city which forms the centre of the division, to the country town which forms the centre of the district, and finally, to the village which constitutes the typical unit of Indian society. But let it be realized that in all these cities and towns there dwells but one-tenth of the total population of India. The remaining nine-tenths live in purely rural surroundings, and draw their subsistence directly or indirectly from tillage of the soil.

In England the rural population is partly gathered in villages, but the landscape is dotted with country houses, farms, and cottages, whose isolation bears witness to a condition of peace and security established centuries ago. In the greater part of India it is otherwise. Except in Assam, Eastern Bengal, and the west coast of Madras, most of the rural population of India is congregated in closely congested hamlets rising like mounds from the centre of the cultivated fields. Long ages of recurring disorder and rapine have imposed on the mass of the Indian people the gregarious habits of the ant. The mass of thickly crowded dwellings, moulded from the earth of the plain in which they stand, and threaded by narrow and tortuous lanes, is, indeed, strangely suggestive of an ant-heap. The suggestion is enhanced by the fact that the village is usually super-imposed on a mound, which the casual traveller is apt to suppose to be some natural hillock, chosen by the villagers for the purpose of better drainage or defence. In this, however, he is usually mistaken; for the mound is commonly composed of the debris of dwellings, many of which had crumbled to dust before the art of writing was known or history had dawned. When wolves still howled where Notre Dame and St. Paul's now stand, and the very names of Athens or Rome were unheard of, there lived and toiled on these sites the predecessors of the villagers who tenant them to-day. It is with some feeling of reverence

that the western parvenu should view these populous mounds, and know himself to be but a creature of an hour. Nearly nine-tenths of the people of India live in such villages, which number 728,605 with an average population of 364.

To an Englishman the word 'village' suggests merely the church and the houses which cluster round it. In Anglo-Indian terminology it signifies rather what the Englishman would express by the word 'parish'.¹ It includes the cultivated lands, and often, some commonage, which surround the hamlet. It is from these surrounding lands that the subsistence of the villagers is drawn. But unlike the English parish, the villages do not cover the face of the whole country. There are tracts which are waste or covered with jungle, very largely the property of government, which are not included within the area of any village. Such waste, when privately owned, is usually included in a village.

§ 2. It is from the produce raised on the fields by the villagers, that revenues have been drawn which have enabled a succession of conquerors to rear kingdoms and empires in India. Their thrones have always depended upon the continuance of their ability to collect these revenues. By immemorial tradition the ruler has been entitled to a portion of the grain heaps collected in the village when harvesting is done.

Thus Sir John Malcolm quotes the Mahabharata as alluding to the origin of kings: 'Mankind' (says the author) were continually

¹ A commissioner notes: 'There is no English word which represents the meaning of the word "mauza". It means a collection of plots of land usually in a ring fence which is treated as a unit for all administrative purposes. It need not necessarily contain any inhabited houses at all, but it may contain many villages (gaon). The word "parish" is the nearest English equivalent but sometimes a "mauza" may contain as little as a hundred acres without one inhabitant.'

Another officer writes: 'I am not sure of the comparison. "Parish" seems to denote a well-ordered village with church, &c., and a number of scattered farms with one or two good metal roads running through it, and lanes for the rest. This gives a false idea of my idea of the Indian village.

'The main site or "abadi", with possibly a few scattered "purwas" (hamlets). The rest nearly all under cultivation, though there may be some groves and now and again some scraps of jungle. The villages lie very often with nothing to separate them from the next village, and internally they have the most primitive means of communication.

'If you walk round a few next cold weather you will I think find that the idea of a parish will give a false idea. You will be able to describe them better than I.'

opposing each other, and they at last went to Brahma to ask him to appoint a king over them. Manu was directed to be their king. He replied, 'I fear a sinful action : government is arduous, especially among ever-lying men.' They said, 'Fear not; you will receive a recompense : of beasts a fiftieth part, and also of gold, and we will give you a tenth of the corn, increasing your store,' &c. Manu (chap. vii, 127-30) says : 'Of cattle, of gems, of gold and silver, added each year to the capital stock (the king's share) is a fiftieth part, of grain an eighth part or a sixth or a twelfth, according to the difference of the soil and the labour necessary to cultivate it.' In chap. xv, 118, it is admitted that the share may be raised to one-fourth of the crops at a time of urgent necessity, as in war or invasion ; and so the tax on the mercantile classes may be raised. It was noticed that in Alexander's time the cultivators were already contributing one-fourth of the grain. In the great southern Hindu kingdom of Bijanagar or Vijayanagar (which lasted till the middle of the sixteenth century), the Minister Vidyaranya declared that a king who took more than one-sixth 'shall be deemed impious in this world, and shall be cast into hell-flames in the next'.

From the many allusions in books, it seems probable that, as long as the old kingdoms were at peace, the traditional sixth was adhered to. The king had no expanding administrations nor demands like those on a modern government ; and as long as the revenue share came in regularly, and as it was moderately increased by increase of cultivation and by the other tolls and dues which the king levied, he had no great temptation to raise the share, at any rate formally and openly. But there always comes a time when invasion and war and other difficulties disturb affairs ; and in later days we shall find Hindu kingdoms, no less than others, raising the revenue freely.¹

The learned author then adds in a note :

It should be remembered with reference to the supposed moderation of the one-sixth, that it really represented little more than a charge for the royal 'privy purse'. No public works, no army, and no police had to be maintained out of it. The army was supported by the estates on the feudal system, and so with the police as far as there was any distinct from the military force. And when the great tanks, bathing-places, and other works which are now looked on with just admiration as showing the wealth, power, and wisdom of the old kings, were made, it was chiefly by unpaid labour, or at least by labour fed with food taken from the neighbourhood. All this cannot be ignored in comparing the modern system with the ancient.²

That ancient Hindu code, the laws of Manu, prescribes that one-twelfth, one-eighth, or even one-quarter of each

opposing each other, and they at last went to Brahma to ask him to appoint a king over them. Manu was directed to be their king. He replied, 'I fear a sinful action : government is arduous, especially among ever-lying men.' They said, 'Fear not; you will receive a recompense : of beasts a fiftieth part, and also of gold, and we will give you a tenth of the corn, increasing your store,' &c. Manu (chap. vii, 127-30) says : 'Of cattle, of gems, of gold and silver, added each year to the capital stock (the king's share) is a fiftieth part, of grain an eighth part or a sixth or a twelfth, according to the difference of the soil and the labour necessary to cultivate it.' In chap. xv, 118, it is admitted that the share may be raised to one-fourth of the crops at a time of urgent necessity, as in war or invasion ; and so the tax on the mercantile classes may be raised. It was noticed that in Alexander's time the cultivators were already contributing one-fourth of the grain. In the great southern Hindu kingdom of Bijanagar or Vijayanagar (which lasted till the middle of the sixteenth century), the Minister Vidyaranya declared that a king who took more than one-sixth 'shall be deemed impious in this world, and shall be cast into hell-flames in the next'.

From the many allusions in books, it seems probable that, as long as the old kingdoms were at peace, the traditional sixth was adhered to. The king had no expanding administrations nor demands like those on a modern government ; and as long as the revenue share came in regularly, and as it was moderately increased by increase of cultivation and by the other tolls and dues which the king levied, he had no great temptation to raise the share, at any rate formally and openly. But there always comes a time when invasion and war and other difficulties disturb affairs ; and in later days we shall find Hindu kingdoms, no less than others, raising the revenue freely.¹

The learned author then adds in a note :

It should be remembered with reference to the supposed moderation of the one-sixth, that it really represented little more than a charge for the royal 'privy purse'. No public works, no army, and no police had to be maintained out of it. The army was supported by the estates on the feudal system, and so with the police as far as there was any distinct from the military force. And when the great tanks, bathing-places, and other works which are now looked on with just admiration as showing the wealth, power, and wisdom of the old kings, were made, it was chiefly by unpaid labour; or at least by labour fed with food taken from the neighbourhood. All this cannot be ignored in comparing the modern system with the ancient.²

That ancient Hindu code, the laws of Manu, prescribes that one-twelfth, one-eighth, or even one-quarter of each

heap may be taken according to the necessities of the King. Akbar is stated to have taken one-third or one-quarter, and the Marathas in their insatiable greed appropriated up to a half. The maxim of a Mohammedan lawyer is quoted to the effect that 'there shall be left for every man who cultivates his lands as much as he requires for his own support till the next crop be reaped, and that of his family and for seed. This much shall be left to him : What remains is land tax and shall go to the public treasury'.¹

It is unnecessary, however, to go into further detail, because, whatever was the early practice, and whatever its causes and its duration, it is quite certain, as Campbell remarks, that in later times the practice in all States—a practice that can be traced back before the end of the seventeenth century, at any rate—was to take a half of the grain in some cases and in places where money assessments were levied, as much as could be got without driving the raiyats to abscond into the jungle, and by the carefully elastic mode of exaction which the old rulers were so clever in applying.²

Such was the view adopted by the Mughal emperors and reduced to a system by Akbar the Great. His principal reform consisted in fixing the revenue on each holding for a period of years, but subject to revision from time to time, so as to let the cultivator know where he stood, and also in converting the revenue where possible from a payment in kind into a cash rent. This clearly implied that the state was the real owner of the soil, and the revenue derived by the state was not a tax but a rent. For this purpose a cadastral survey was made and a doomsday book compiled like that which William the Conqueror compiled for England. The officers, through whose agency these surveys and records were framed, were the *putwaris*, or village accountants, supervised by *kanungos*, in charge of a larger area called the *pargana*.

§ 3. The collection of the revenues was doubtless farmed out to contractors; but at least there were data by which the exactions of the revenue farmers could be checked, so long as the authority of the central government at Agra or Delhi remained effective.

As a matter of fact, in the best days of Mughal rule, moderation and control over collecting officers were duly observed; but no

Abstract

ruler ever dreamt that he might not from time to time (as he chose—there was no other principle) revise the assessment. Good rulers did so by a formal measurement and moderate additions. Indifferent rulers did so by the easier expedient of merely adding on ‘cesses’ (known in revenue language as ‘hubub’ and ‘abwab’). Bad rulers simply bargained with farmers for fixed sums, thus both compelling and encouraging the farmer to raise the assessment on the cultivators, or, in other words, delegating to the farmer the proper functions of the State officer in revising assessments.¹

As the Mughal power decayed, the survey and records became obsolete, and the worst evils of revenue farming became rampant. The revenues of districts or even provinces were presented to favourites, or else used to conciliate dangerous satraps. It was in accordance with this practice that rights to collect revenue in Bengal were conceded to the British East India Company, and also to Clive in person. The extension of British dominion has everywhere meant an assumption of the right to collect the revenues and finally of the Mughal claim to the general ownership of the land.

We find that in modern times, all Native States claimed, and still claim, to be *de facto* owners of every acre of soil in their States, and have taken as much land-revenue as they could get without seriously starving the people.² . . . It will be found that, in spite of the weight of law-books and commentaries, we shall end, in India, with finding that, as already stated, the King or the State claimed to be the only owner or landlord of all land. At least that certainly had come to pass by the end of the eighteenth century.³ . . . Certainly, however, the Governments of that time did, and the native governments of the present day do, make a claim to be landlords of all land—but they should rather base such a claim on conquest and the disorders of later times, than on any of these ancient authorities. Putting aside the obvious mistake about ‘ancient usage’ it is hardly possible that Mr. James Grant, and Colonel Munro, and many others, could have been mistaken about the fact that in their time all governments did claim to be land-owners; and, as I said, it is quite certain that the Nizam and other rulers make the same claim now.⁴

With reference to the extent to which these claims were adopted by the British Government, Baden-Powell remarks—

I think, on the whole, what was meant by the various declarations in the Regulations and elsewhere, was this; that the Government claimed to succeed to the *de facto* position of the preceding ruler only so far as to use the position (not to its full logical extent but)

The first step in the process of developing a curriculum is to identify the needs of the students. This involves a thorough analysis of the current curriculum and the needs of the students. The next step is to develop a list of learning objectives that will guide the development of the curriculum. These objectives should be specific, measurable, and achievable. The third step is to select the content and materials that will be used to teach the objectives. This involves a careful selection of textbooks, articles, and other resources. The fourth step is to develop the lessons and activities that will be used to teach the content. This involves a careful selection of activities that will engage the students and help them to learn the content. The fifth step is to evaluate the curriculum and make any necessary revisions. This involves a careful review of the curriculum and the results of the evaluation. The final step is to implement the curriculum and monitor the results. This involves a careful implementation of the curriculum and a monitoring of the results to ensure that the students are learning the content and achieving the objectives.

as a *locus standi* for redistributing, conferring, and recognizing rights on a new basis.

And the outcome of the action taken by the Government was this—that it at once recognized certain rights in private individuals, and only retained such rights for itself as were necessary.

The power to make this distribution was no doubt based on the *de facto* power of the Government to dispose of all land.

I may exhibit the main features of the disposition of landed rights made by Government under five heads.

- (1) Government used its own eminent claim as a starting-point from which to recognize or confer definite titles in the land, in favour of persons or communities that it deemed entitled.
- (2) It retained the unquestionable right of the State to all waste lands, exhibiting, however, the greatest tenderness to all possible rights either of property or of user, that might exist in such lands when proposed to be sold or granted away. This right it exercised for the public benefit, either leasing or selling land to cultivators or to capitalists for special treatment : thus encouraging the introduction of tea, coffee, cinchona, and other valuable staples. Or it used the right as the basis for constituting State Forests for the public benefit, or for establishing Government buildings, farms, grazing grounds, and the like.
- (3) It retained useful subsidiary rights such as minerals, or the right to water in lakes and streams. In some cases it has granted these away, but all later laws reserve such rights.
- (4) It retained the right of escheat : and of course to dispose of estates forfeited for crime, rebellion, &c.
- (5) It reserved the right necessary for the security of its income (a right which was never theoretically doubtful from the earliest times) of regarding all land as in a manner hypothecated as security for the land revenue. This hypothecation necessarily implies or includes a right of sale in case the revenue is in arrears.

After Government has so distinctly conferred proprietary rights in land, any later use of the term 'universal landlord', as applied to Government, can only be in the nature of a metaphor, or with reference to the ultimate claim of Government alluded to in the last paragraph or that which arises in case of a failure of heirs.
